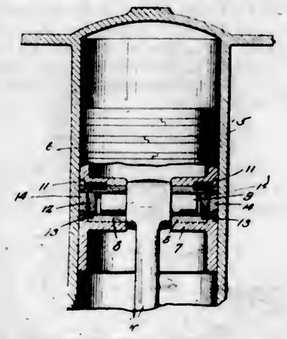
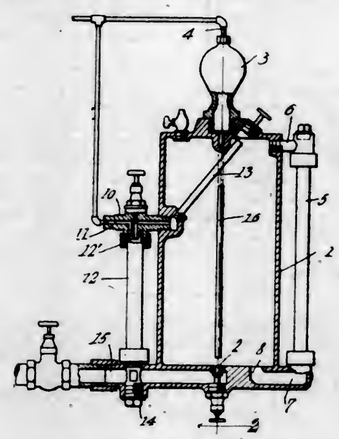
1,375,141. GRADE-INDICATOR. CHARLES C. FORD, Point Loma, Calif. Filed July 7, 1919. Serial No. 309,042. 3 Claims. (Cl. 33—215.)



1. A grade indicator, including a casing, a circular indicator member provided with an adjustable band having adjacent scales whose graduations extend in opposite directions from a certain point on said band and revolubly mounted in said casing and gravity actuating means connected to said indicator for revolving the same.

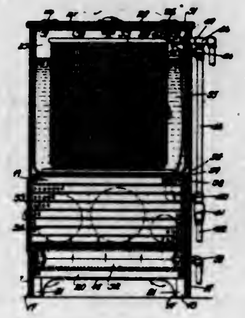
1,375,142. REMOVABLE WRIST-PIN BEARING. ROBERT F. FORKNER, Princeton, W. Va., and ALEXANDER STRAIGHTIFF, Roanoke, Va. Filed July 23, 1920. Serial No. 398,451. 2 Claims. (Cl. 74—108.)



1. In combination with a piston and the connecting rod associated therewith, bearing supporting members forming a part of the piston, tubular bearing members

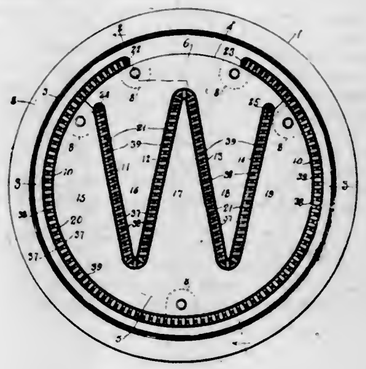
disposed within the bearing supporting members, a wrist pin positioned in the bearings, thrust bearings disposed

adjacent to the outer ends of the tubular bearings, and means for securing the bearings within the bearing supporting members.



1,375,143. LUBRICATOR. CHAUNCEY O. FORTNEY, Bowling Green, Ohio. Filed Oct. 24, 1919. Serial No. 332,942. 1 Claim. (Cl. 184—50.)

A lubricator including a lubricant container, a condenser thereon, means for conducting water of condensation from the condenser to the bottom portion of the container, a valve casing opening into the upper portion of the container, an inclined tube within the container for conducting lubricant from the upper portion of the container to the casing, a clean-out plug removably mounted in the top of the container and in line with the tube, a sight glass engaged at its upper end by the valve casing, a nipple extending from the valve casing for directing lubricant therefrom and into the upper end of the sight glass, a valve for controlling the flow of lubricant through the nipple, means for directing steam into the condenser and into the valve casing and around the nipple and thence into the sight glass, a valved drain outlet in the bottom of the container, a pipe extending from the outlet, a hollow plug within the pipe and opening into the lower end of the sight glass, said plug having openings in its walls in communication with the interior of the pipe.

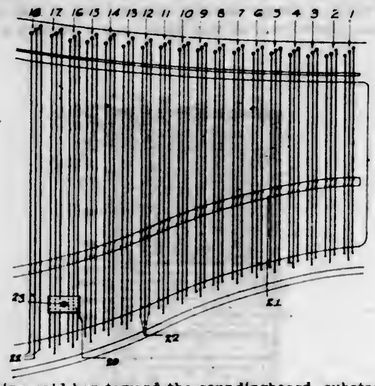


1,375,144. KITCHEN-CABINET. GROVER C. FRANTZ, Harrisburg, Pa. Filed May 31, 1919. Serial No. 301,047. 8 Claims. (Cl. 45—16.)

2. A cabinet of the character described including a jacket providing a casing; a tank depending into said jacket from the top thereof, said jacket having an opening in its front arranged below the level of the bottom of said tank; a drawer movable into and out of said opening below the bottom of said tank; and a heating agent

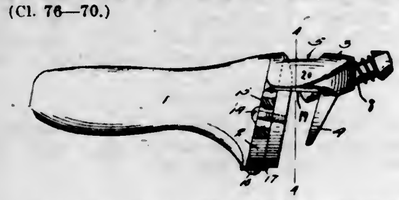
within said jacket directly below the bottom level of the drawer, said jacket being open at its bottom whereby air can enter the interior of said jacket and move upwardly to be heated by said heating agent; substantially as described.

1,375,145. ELECTRIC BURNER. CORAL V. FUNDERBURG, Yellow Springs, Ohio. Filed May 19, 1919. Serial No. 298,019. 4 Claims. (Cl. 219—34.)



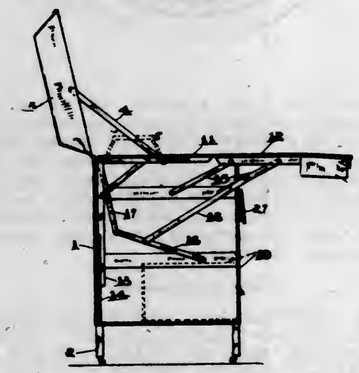
1. In an electric burner, a housing comprising a closed working surface and massive metal portions disposed relative thereto and adapted to conduct heat absorbed thereby to said working surface during prolonged intervals, grooves arranged relative to the housing on the side opposite said surface between the respective insert portions, heating coils extending through said grooves and insulated from said metal, and connections from the coils leading to a suitable source of current supply.

1,375,146. PRESSURE-BAR FOR PIANO-STRINGS. ALPHONS GOTTHOLD GARDNER, Los Angeles, Calif. Filed June 30, 1920. Serial No. 393,222. 1 Claim. (Cl. 84—215.)



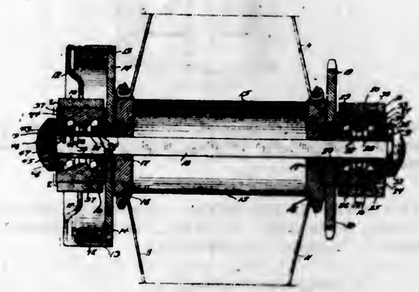
A piano having a short pressure bar extending across the strings for two treble notes only, in the region of

Nos. 16 and 17 from the top, said bar located between the soundingboard bridge and the hitch plate, and a screw



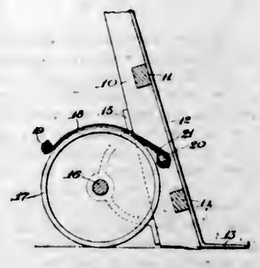
drawing said bar toward the soundingboard, substantially as described.

1,375,147. SAW-SET. EMERY GUAY, Spokane, Wash. Filed Nov. 29, 1919. Serial No. 341,479. 2 Claims. (Cl. 76—70.)



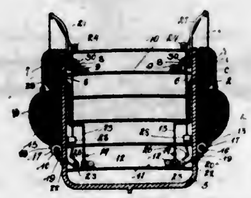
1. In a device of the class described, the combination of a handle having an extension head, arms connecting the handle with said head and having a sight opening positioned beneath the head, a setting pin slidably mounted in the head and having a rounded end, a spring normally retaining the pin in retracted position, and a transverse smaller pin mounted in the setting pin adapted to limit its retracted movement, a setting block having a rounded portion, means for longitudinally adjusting and setting said block, and means for holding said block in its longitudinally adjusted position in the handle, whereby the device is adapted for setting the teeth of different types of saws.

1,375,148. COOKING-CABINET. ALFRED E. GUIDAL, Toronto, Ontario, Canada. Filed June 10, 1920. Serial No. 387,966. 1 Claim. (Cl. 45—16.)



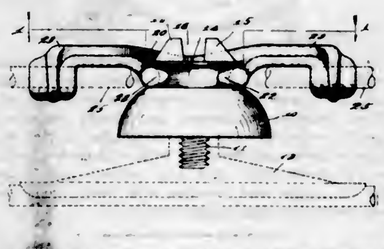
In a cooking cabinet, the combination of a casing; a stove board movable from a position at the top of the cabinet to a position below the top of the cabinet and vice versa; a table movable from a position at the top of the cabinet to a position in front thereof in substantially the same plane and vice versa; and supporting means and connections between the stove board and the table whereby their movements are reciprocal comprising vertical guides for the stove board, parallel pivoted links supporting the table, and link and lever connections whereby the table actuates the stove board.

1,375,149. WHEEL-MOUNTING FOR MOTORCYCLES. JOSEPH A. HAGGERTY, Philadelphia, Pa. Filed June 7, 1920. Serial No. 386,933. 6 Claims. (Cl. 208—11.)



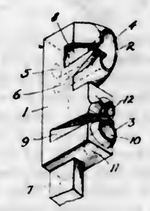
1. The combination in a motorcycle of two frame portions spaced apart; bearings in said frame portions; an actuating wheel secured to one of said bearings; a driving wheel positioned between said frame portions and including a hub having a hole angular in cross section; and an axle having an angular portion slidably fitting within said hole in the driving wheel and having a part locked to rotate with said one bearing but being freely slidable lengthwise therethrough, said axle having a nut screwed thereon which is removable to permit said axle to be withdrawn from the hub of the driving wheel; substantially as described.

1,375,150. TRUCK-BRAKE. FRED G. HALLADAY, Appleton, Wis., assignor to Safety Truck Brake Co., Appleton, Wis., a Corporation of Wisconsin. Filed Jan. 2, 1918. Serial No. 210,023. 5 Claims. (Cl. 188—22.)



1. In a freight handling truck having side bars and rollers, angular shouldered projections on the side bars of the truck near the rollers, curved spring members with their ends bent around the angular section of said projections and extending over the rims of the rollers and normally spaced therefrom to form brake shoes, said spring members having their other ends bent to form loops, and a cross bar connecting the brake shoes and having its ends confined within the loops of the spring members and adapted to apply the brake shoes to the rims of the rollers by a movement toward the rollers.

1,375,151. WRECK-PREVENTING APPARATUS FOR SHIPS. ROBERT J. HAMILTON, Browning, Mont. Filed Mar. 3, 1919. Serial No. 280,243. 1 Claim. (Cl. 114—68.)

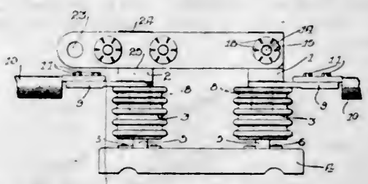


The combination with a ship having opposing sides, a roller located on each side of the ship, an inflatable member connected with each roller and arranged to be carried by the ship above the water line thereof, cables connected with said rollers, guides on said ship for said cables, means for operating said cables to lower said rollers and inflatable members below the water line, means for raising said inflatable members and rollers above the water line, and means for inflating said members, said rollers being adapted to permit of the inflatable members to be wound thereon when said members are deflated.

1,375,152. TROLLEY-WIRE HANGER. EDWARD HEYDON, Indianapolis, Ind. Filed Nov. 24, 1919. Serial No. 340,103. 8 Claims. (Cl. 191—40.)

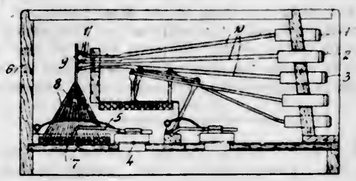
1. A trolley-wire hanger, comprising a body having a circumferential groove, and a yoke having a laterally opening recess arranged to receive the body by interfitting with said groove, said yoke having at the sides of said recess projecting fingers which can be bent toward each other to lock the body and yoke together.

1,375,153. SELF-CLEANING TYPE. ELBERT R. HOBBS, Castleford, Idaho. Filed Feb. 24, 1920. Serial No. 360,733. 3 Claims. (Cl. 197—36.)



1. A type for typewriting machines and the like having a body carrying on its face a printing type and having formed in itself through passages extending from the inner edges of the type face to discharge points on a non-printing surface of the body, said body being beveled away from the character edges of the type and all passages or channels through said body being so constructed as to permit constant expansion and consequent discharge of any material entering the type face in use.

1,375,154. COMPOSITION FOR MASKING THE ACRID TASTE OF EPSOM SALT. GEORGE J. HUSSMAN, St. Louis, Mo. Filed Apr. 29, 1920. Serial No. 377,593. 1 Claim. (Cl. 167—7.)

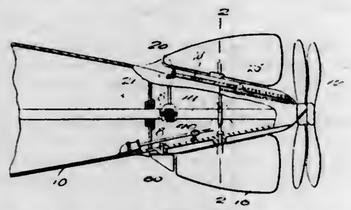


A masked and agreeable Epsom salt compound, comprising a major portion of Epsom salt and a minor portion comprising a mixture of saccharin, oil of anise and oil of peppermint, in substantially the proportions stated.

1,375,155. SWITCH. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 18, 1918. Serial No. 267,374. 9 Claims. (Cl. 200—48.)

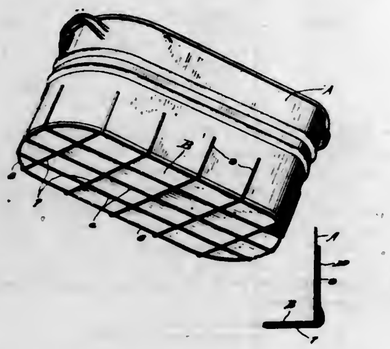
1. In combination, a pair of rigid stationary contact members, a pair of separate flexible blade members pivoted on one of said contact members and lying outside of both said stationary contact members, said blade members having their outer ends offset to engage each other for spacing said blades apart a distance substantially equal to or slightly less than the thickness of the other of said contact members and being free to permit lateral play of the blades at their ends to make good contact with the latter contact member.

1,375,156. ACCORDION. KARL AXEL JAKOBSSON, Stockholm, Sweden, assignor to William Farre, Christiania, Norway. Filed Oct. 7, 1919. Serial No. 329,036. 1 Claim. (Cl. 84—376.)



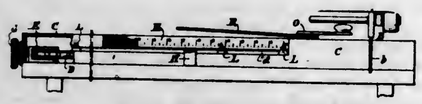
In an accordion, the combination with a plurality of air valves, of a series of parallel rock-shafts, rods connecting said rock-shafts to the valves, an arm fixed to each rock-shaft and having an extension, the extensions of all of said arms lying in the same plane, an upper series of keys provided with rods having angular extensions designed to simultaneously engage a plurality of the arm extensions, and other keys having rods provided with extensions of less length than the extensions of the first mentioned key-rods engaging a different number of the arm extensions than the extensions of the first mentioned key-rods.

1,375,157. TORPEDO. HANS P. JENSEN-BEARLUNDD, Lisbon, Portugal. Filed July 2, 1919. Serial No. 308,254. 5 Claims. (Cl. 114—23.)



1. In combination, a torpedo including a body, propelling means therefor, a vertical rudder controlling the

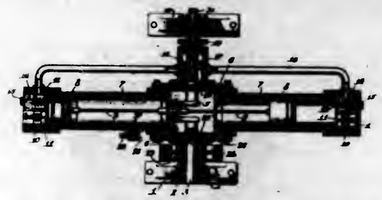
direction of travel of the torpedo, a screw connected with and operable by the propelling means, an adjustable abutment carried by the screw and operable thereby, and a



curved arm carried by the rudder and engageable by the abutment to automatically adjust the rudder during travel of the torpedo.

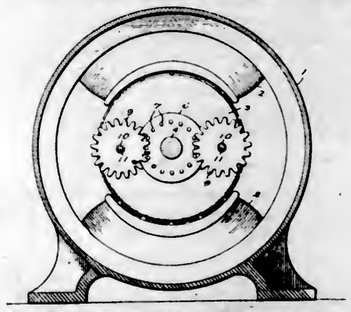
1,375,158. BOTTOM-PROTECTOR FOR WASHBOILERS AND CULINARY VESSELS. LEE R. KRAMER, Kewanee, Ill. Filed Sept. 5, 1919. Serial No. 321,805. 3 Claims. (Cl. 53—8.)

1. A protector for culinary utensils comprising a plurality of longitudinal wires adapted to engage the bottom of the utensil throughout substantially its entire length; a plurality of transverse wires permanently secured to said longitudinal wires and lying in the same horizontal plane and adapted to engage the said bottom throughout substantially its entire width; the ends of all of said wires being bent to engage the sides of the utensil and the whole constituting a reinforcement for said bottom and sides.



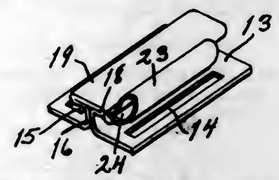
1,375,159. SAW-TABLE GAGE. ADOLF G. KROCKER, Waco, Tex. Filed Aug. 21, 1920. Serial No. 405,079. 6 Claims. (Cl. 143—168.)

1. Gage mechanism for saw-tables comprising an endless band, a stop carried thereby, a series of pointers carried by the band, a scale coöperating with the pointers and stop and means for operating the band.



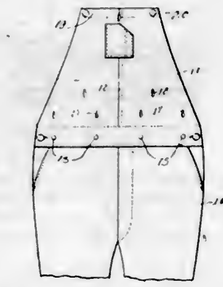
1,375,160. AIR-PUMP. PAUL KUEHN, Denver, Colo. Filed Dec. 15, 1919. Serial No. 344,922. 5 Claims. (Cl. 230—31.)

1. In a device of the character described, the combination of a non-rotatable crank shaft, cylinders extending radially from and rotatable about the crank shaft, pistons within the cylinders, flexible connections connecting the



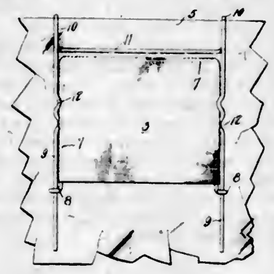
pistons and a crank of the crank shaft, and means for holding the pistons in spaced relation.

1,375,161. MOTOR AND DYNAMO CONSTRUCTION. CLYDE W. LANDERS, New York, N. Y. Filed Apr. 16, 1920. Serial No. 374,292. 16 Claims. (Cl. 171—321.)



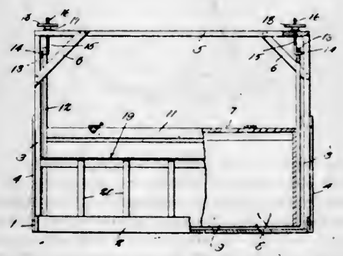
2. In a device of the character described, the combination with a casing, a stationary element and a revolving element, of a gear wheel arranged on each side of said revolving element, conductors electrically connected to said gear wheels, laterally projecting pins carried by said revolving element and meshing with said gear wheels, and means revolving with said gear wheels and connected thereto to oppose said meshing and insure good contact between said gear wheels and said pins.

1,375,162. HOSE-SUPPORTER. ERICK V. LINDQUIST, Des Moines, Iowa, assignor to Qupee Hose Supporter Company, Eau Claire, Wis., a Corporation of Wisconsin. Filed Sept. 23, 1920. Serial No. 412,225. 3 Claims. (Cl. 24—245.)



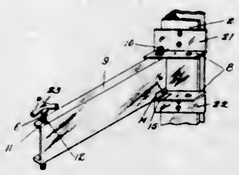
1. A hose supporter, comprising a suspending member formed with depending loops one in front of the other, a base plate formed with a slot through which the rear loop is passed, said base plate also being formed with a long transversely arranged stud outstanding therefrom, said stud being formed at its outer end with oppositely extending flanges the lowermost of which is of greater length than the uppermost, and a clasp formed with a transverse slot by which it is suspended from the forward loop and also formed with an enlarged opening adapted to engage and embrace said stud member, said opening being of less vertical width than the combined width of the flanges of said stud, said base plate also being formed with an outstanding member arranged parallel with said stud, said member extending adjacent to the margin of one of the flanges of said stud; and tending to prevent removal of said clasp from said stud.

1,375,163. OVERALLS-BIB. MERRITT M. LOGAN, Springfield, Mo. Filed Apr. 10, 1920. Serial No. 372,864. 1 Claim. (Cl. 2—140.)



In a garment, a trousers section, a bib section having its lower end secured to the trousers section, said bib section having a plurality of button holes formed therein, buttons carried by the upper extremity of the bib, said bib section adapted to be folded downwardly, said buttons adapted to pass through predetermined openings of the bib sections, and means carried by the trousers and engaging within the openings of the bib for securing the bib in its folded position.

1,375,164. WINDSHIELD-SHADE. WATSON H. MALOTT, San Francisco, Calif. Filed Dec. 9, 1918. Serial No. 265,820. 2 Claims. (Cl. 296—97.)

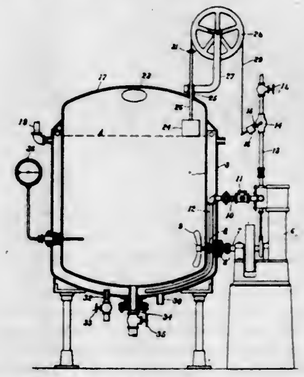


1. A shade for automobile windshields comprising a frame, means for suporting the frame on the windshield, a second frame slidable on said first frame and resiliently held therein and a fabric envelop adapted to be drawn over said second frame.

1,375,165. HOG-FEEDER. ROY J. MAXWELL, Butler, Ind. Filed Oct. 25, 1919. Serial No. 333,239. 1 Claim. (Cl. 119—53.)

In a device of the class described a frame including end standards and a cross beam connecting the standards; a trough; a hopper spaced above the trough, said hopper having uprights adjacent the standards and means for adjusting the space between the hopper and the trough, said means comprising a threaded shank extending through the cross beam, a threaded member engaging the shank and resting on the beam and a bearing projecting at right angles from the shank and extending through the upright on the hopper, the space between the end of the bearing and the standard being less than the thickness of the upright.

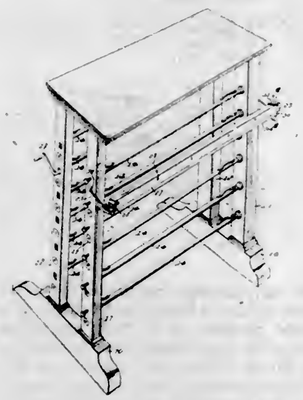
1,375,166. TABLE-SEAT. HAROLD MESTRE, San Francisco, Calif. Filed Aug. 7, 1919. Serial No. 315,851. 7 Claims. (Cl. 155—81.)



1. A table seat structure comprising a pair of bracket members with flanges adapted to be attached in spaced and horizontal position on a fixed supporting part, a carrying bar formed of channel iron having alined holes through its flanges at one end to receive a pin mounted in the said bracket flanges, and a standard passed through apertures in the flanges of the opposite end of the bar, said standard having a seat on its upper end.

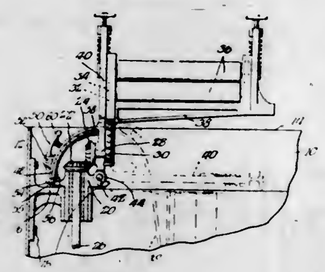
1,375,167. MANICURE INSTRUMENT. THOMAS E. NEW, Cincinnati, Ohio, assignor to The Precision Equipment Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 3, 1920. Serial No. 355,964. 5 Claims. (Cl. 132—76.)

1. A manicure instrument comprising in combination a main body provided with a neck and head portion, and a pointed scraper having a portion embracing said neck and slidable thereon to dispose its pointed portion in intimate contact with said main body or extended therefrom.



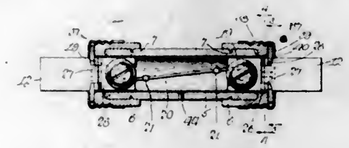
1,375,168. FLUID-AGITATING APPARATUS. NIELS D. NIELSEN, Elyria, Ohio. Filed Jan. 17, 1919. Serial No. 271,569. 4 Claims. (Cl. 259—1.)

1. In combination, a tank adapted to contain a liquid, means for stirring the liquid and means controlling the



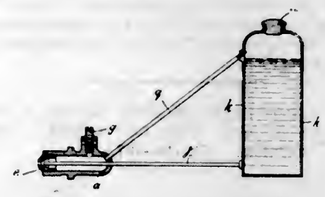
first mentioned means to cause the liquid moved by said stirring means to be substantially proportional to the amount of liquid in the tank.

1,375,169. COMBINED DISPLAYING AND DISPENSING DEVICE. WESLEY H. PARKS, Bixby, Okla. Filed June 24, 1920. Serial No. 391,340. 1 Claim. (Cl. 211—18.)



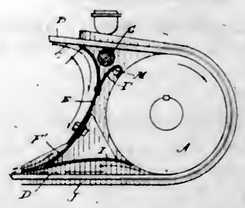
In a combined displaying and dispensing device, a frame having end posts, spindles journaled in the posts, apertured plates on the outer surfaces of the posts alternating with relation to the spindles, a cutter and resilient hangers at the ends of said cutter having extensions projecting into the apertures of the plates and removably applied thereto whereby the cutter may be suspended in operative relation to any one of the spindles.

1,375,170. WASHING-MACHINE WITH FOLDING WRINGER. HALSEY D. PAYNE, ALVIN W. DE CLERQUE, and SIDNEY T. SJOBERG, Chicago, Ill., assignors to Cadillac Washing Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 7, 1920. Serial No. 408,705. 4 Claims. (Cl. 68—32.)



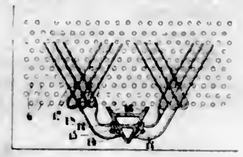
1. In mechanism of the class described, a cabinet, a wringer mechanism mounted in a frame, means pivoting the wringer frame at a point inside the cabinet and below its upper edge in such manner that the wringer may be swung in the plane of the body of the wringer from an elevated position where it extends above the top of the cabinet to a lower position where it is below the top of the cabinet, means for selectively locking the wringer in each of said positions, and means in the cabinet adapted to deliver power to the wringer when the wringer is in its elevated position.

1,375,171. RENEWABLE SAFETY-FUSE. AARON PETERSON, Chicago, Ill. Filed June 20, 1919. Serial No. 305,467. 4 Claims. (Cl. 200—132.)



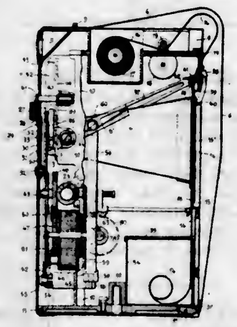
1. The combination with a flat terminal blade having opposed recesses merging with its side edges and forming a resultant web, and a collar fixedly secured to said web and having a slit extending from the web to the periphery thereof.

1,375,172. GAS-ENGINE-STARTING DEVICE. JOHN WILLIAM PHILLIPS, Hendon, England, assignor to Bishopsgate General Trading Company Limited, London, England. Filed Feb. 25, 1920. Serial No. 361,194. 3 Claims. (Cl. 123—180.)



1. A gas engine starting device comprising a fuel tank, said tank having an air opening therein, a tubular body the interior of which is of two diameters thereby forming a chamber and a passageway terminating at opposite ends of said body, a spray nozzle in the open end of said chamber, a tube in said passageway terminating at one end in said spray nozzle, a fuel pipe connected to said fuel tank and spaced from but in communication with the other end of said tube, means for connecting said tubular body to the induction pipe of the engine and means for introducing air into said chamber.

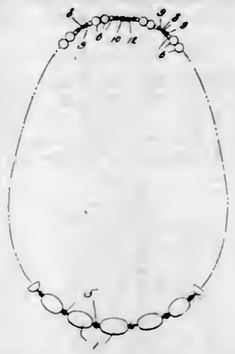
1,375,173. AIR-SKIMMER FOR BELT-PULLEYS. HAROLD M. PLAISTED, St. Louis, Mo., assignor of forty-nine one-hundredths to Milton F. Williams, St. Louis, Mo. Filed Aug. 25, 1919. Serial No. 319,525. 6 Claims. (Cl. 74—21.)



1. The combination with a belt and pulley, of an air-skimming plate located adjacent to said pulley and having one air-skimming edge in proximity to the inside of the approaching belt and provided with another air-skimming edge in proximity to the pulley, and adapted to skim the air from the inside of the belt near the pulley and also from the surface of the pulley adjacent to the approaching belt.

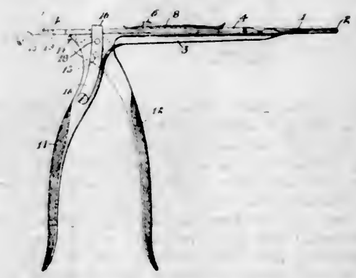
1,375,174. WATER-TUBE BOILER AND SUPERHEATER THEREFOR. ROLAND SYDNEY PORTHAM and JAMES DORNAN, London, England. Filed Sept. 17, 1918. Serial No. 254,445. 1 Claim. (Cl. 122—476.)

A water tube boiler comprising upper drum and lower drums, water tubes connecting said drums, and a superheater comprising divided headers of triangular shape mounted with a base adjacent the water tubes, and elements of multiple U-formation connected to the slant sides of said headers and projecting diagonally into but not beyond the banks of water tubes, each element being disposed between adjacent diagonal rows of boiler tubes whereby the superheater elements are subjected to the same degree of heat as the adjacent boiler tubes and at the same time, insertion or withdrawal of the superheater elements being effected in a direction parallel to the slant sides of the headers, as set forth.



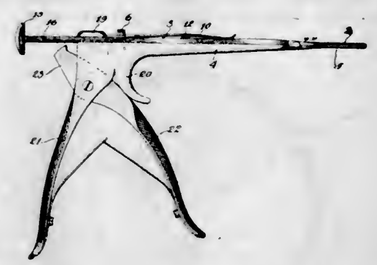
1,375,175. PHOTOGRAPHIC CAMERA FOR TAKING UP PART NEGATIVES FOR NATURALLY COLORED PICTURES. SERGE DE PROCOUDINE-GORSKY, Granstad, Konnerud, near Drammen, Norway. Filed Sept. 20, 1919. Serial No. 325,264. 9 Claims. (Cl. 95—2.)

1. A camera for color photography comprising an objective; a rotary disk arranged in front thereof and provided with a set of light filters; operating mechanism for said disk; and a film-feeding device embodying an oscillating frame operatively connected with the disk and provided with means engageable in the perforations in the film.



1,375,176. NECKLACE. EDWIN L. RICHARDS, Los Angeles, Calif. Filed Nov. 5, 1920. Serial No. 421,975. 2 Claims. (Cl. 63—21.)

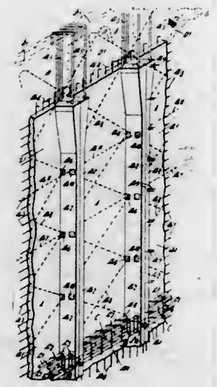
1. A necklace comprising a plurality of wire links having terminal eyes or loops and beads upon the links and held against movement longitudinally thereof by the ends of the wires forming the links, the eye or loop at the free end of one of the terminal links being bent to form



a hook, the eye or loop at the free end of the other terminal link being proportioned to receive said hook.

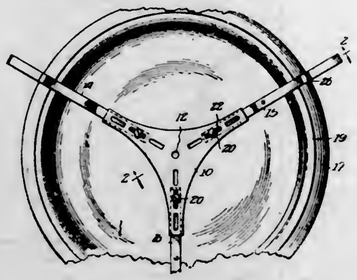
1,375,177. TONSIL-REMOVER. GUSTAV F. RICHTER, Brooklyn, N. Y. Filed Apr. 15, 1919. Serial No. 290,144. 8 Claims. (Cl. 128—320.)

1. A tonsil remover comprising a bed and blade guided therein adapted to close on the tonsil and a two-stage closing means therefor comprising a thumb-or-finger-operated member for initially closing the bed and blade on the tonsil to compress the same and levers to be gripped within the hand for completing the closing movement.



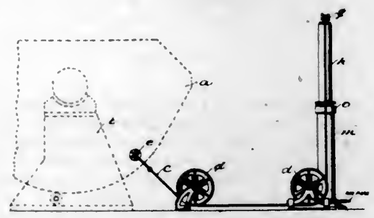
1,375,178. TONSIL-REMOVER. GUSTAV F. RICHTER, Brooklyn, N. Y. Filed June 18, 1919. Serial No. 305,030. 7 Claims. (Cl. 128—320.)

1. A tonsil remover comprising frame and blade severing members relatively slidable toward their severing position, initial closing means therefor, and power multiplying means for completing the closing movement, said power multiplying means being held inoperative by the severing members during the initial closing movement



and one of said members being provided with a strong part overhanging the other member to prevent the displacement of the blade from the frame under powerful action of the power multiplying means during the initial closing stage.

1,375,179. REINFORCED CONCRETE CONSTRUCTION OF SHIPS, FLOATING DOCKS, PONTOONS, AND THE LIKE. HARRY C. RITCHIE, Liverpool, and MORITZ KAHN, London, England. Filed Aug. 7, 1918. Serial No. 248,780. 11 Claims. (Cl. 114—65.)

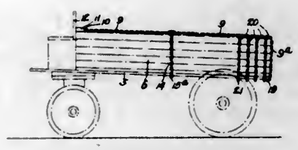


1. In a reinforced concrete ship, in combination; a series of pre-cast reinforced units each consisting of a plane part and two end flanged parts; reinforcing bars passing through the said flanged parts and projecting through the ends thereof and adapted with the flanges to form sections of one of the ship's frame members; reinforcing bars in the plane portions projecting beyond the edges thereof; and frame members of the ship consisting of reinforcing bars and concrete, cast *in situ*, at right angles to the frame, of which the flanges of the units form parts, the said pre-cast units being connected together end to end by joints made between the faces of the flanges and being connected together at their edges by the frame members cast *in situ*, the reinforcing bars of the flanges being connected together in the members cast *in situ* and forming continuous frame members running in the one direction connected at intervals to the cast *in situ* frame members running in a direction at right angles; substantially as described.

1,375,180. INDIRECT-LIGHT-BOWL HOLDER. CLARENCE H. ROCKEY, Chicago, Ill. Filed Sept. 20, 1919. Serial No. 325,114. 1 Claim. (Cl. 240—115.)

In mechanism of the class described, a horizontal central-member of flat metal having its outer edge bent to a vertical plane, an adjustable arm slidable therefrom, through an opening made in said vertically turned edge, a pin and slot connection between said members located between the center of the device and said vertically turned edge, for detachably fastening the arm in various positions with reference to the central member, and means on the outer extremity of the arm for attachment to the end of a lighting bowl.

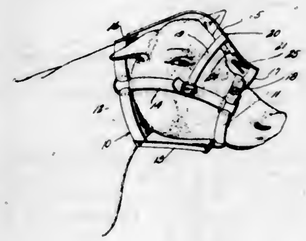
1,375,181. OSCILLATING PUDDLING-FURNACE. JAMES PETER ROE, Pottstown, Pa. Filed Mar. 29, 1919. Serial No. 285,991. 3 Claims. (Cl. 263—33.)



1. In a device of the character described, air compressing means, an oscillating puddling furnace and separately arranged from said furnace, and means connected with the latter and with the air compressing means to control the latter and vice versa, for the purposes set forth.

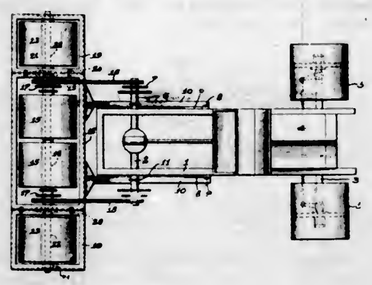
1,375,182. COLLAR. ANTHONY G. SALERNO, Chicago, Ill. Filed Sept. 2, 1920. Serial No. 407,763. 3 Claims. (Cl. 2—91.)

1. A collar comprising separable similarly shaped outer and lining members each having neck-band and flap portions, said outer member being formed of pliable fabric and having outer and inner plies connected at the meeting margin of the flap portions and of the ends of the neck-band portions and there being an opening between said plies intermediate the ends of the members, and said lining member being relatively stiff and foldable together with said outer member along a line between the neck-band and flap portions of the members.



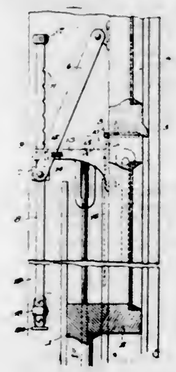
1,375,183. LOAD-BINDER FOR VEHICLES. MARY E. SAUNDERS, Philadelphia, Pa. Filed Sept. 14, 1920. Serial No. 410,149. 2 Claims. (Cl. 280—179.)

2. A load binder including members adapted to extend longitudinally over a load on a vehicle and having a housing at its rear end adapted to embrace the rear portion of a load, said housing including transversely extending members and longitudinally extending members, said transverse and latter mentioned longitudinally extending



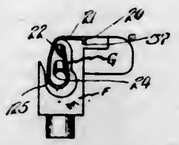
members being provided with means for connection with the bottom of the vehicle, said first mentioned longitudinally extending members including a transverse bar; and laterally extending flexible means connected to the opposite end portions of said bar and adapted to embrace the side portions of a load upon the vehicle, said laterally extending means having means for connection with the bottom of said vehicle; substantially as described.

1,375,184. COW-HALTER. LAWRENCE A. SCHNEIDER and AUGUST R. MEYER, Springfield, Minn. Filed Sept. 17, 1920. Serial No. 411,008. 1 Claim. (Cl. 119—142.)



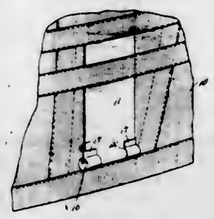
In a device of the character described, the combination with a cow halter including front and rear loop straps and longitudinal connecting straps, of a metallic body member, one end of said body member being connected to the top of said rear loop strap, the other end of said member being connected to the top of said front loop strap, means connected with said connecting strap and supporting said metallic member intermediate its ends, a transverse bar on said metallic member, depending studs on said bar, adapted to engage the face of the animal, and a cushion member carried on said metallic member to absorb the shock between said metallic member and the face of the animal in connection with which the halter is used substantially as described.

1,375,185. ROLLER-TRACTOR. ALBERT J. SEITER, Prospect, Ohio. Filed July 2, 1920. Serial No. 393,559. 2 Claims. (Cl. 180—20.)



1. In a roller-tractor combination, a tractor having a rear axle assembly devoid of wheels, a roller attachment pivotally connected to said tractor to support the rear end thereof and having a roller shaft receiving power from the rear axle assembly, and side roller units abutting the sides of the roller attachment and connected thereto, said side roller units having roller shafts coupled to the roller shaft of the roller attachment.

1,375,186. COMBINED WINDOW AND TRANSOM. GEORGE SINCAK, Bridgeport, Conn. Filed June 10, 1920. Serial No. 387,898. 5 Claims. (Cl. 20—40.)

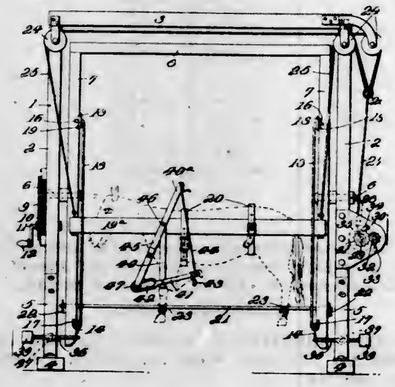


4. A window construction including a slidable upper sash, a transom hinged to the top rail thereof, and means carried by the sash for opening the transom.

1,375,187. SHUTTLE. ISAAC SNOW, Lawrence, Mass. Filed Apr. 17, 1919. Serial No. 290,821. 16 Claims. (Cl. 139—46.)

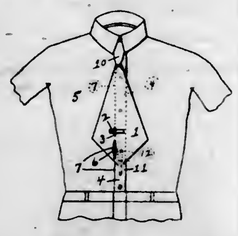
9. The combination in a shuttle having an eye, a bobbin chamber and a threading chamber in continuation thereof which connects with the eye, of a thread directing guide plate so fixed to the top side of the shuttle as to extend into the threading chamber, such guide plate having a thread trapping rim which extends from and under its forward part and a thread retaining guide hook which extends from and under its back part.

1,375,188. GARTER-SUPPORT. JOHN STERN, New York, N. Y. Filed Apr. 2, 1919. Serial No. 286,910. 6 Claims. (Cl. 2—98.)



1. In a device of the class described, the combination of a flexible tab, a rectangular one-piece metal plate having a length greater than the width of the tab and with the two end portions lapped back upon themselves with the edges of the tab held therebetween and said plate doubled back upon itself along a medial longitudinal line to form a tube adapted to receive a pin.

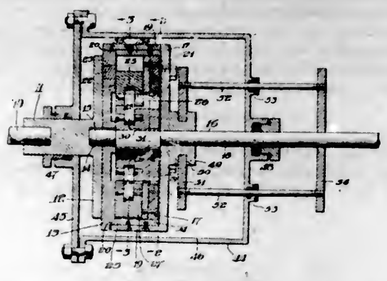
4. A one-piece-sheet metal pin tube constituting part of a garter support and comprising an open end tubular part



adapted to receive a pin element of the garter, said tubular part having extensions at opposite ends thereof to form a double thickness of material at the ends of the tube and adapted to receive a fabric tab between the double thickness and lateral extensions projecting from the side of said tubular part.

1,375,189. SAFETY STOCK DEVICE. JOSEPH THOMAS TUCKER, Match, Tenn. Filed Apr. 25, 1919. Serial No. 292,592. 2 Claims. (Cl. 119—98.)

1. An apparatus of the kind described, including a frame having a plurality of side bars, a plurality of cross-arms carried by each of said bars and extending transversely of said frame, each of said cross-arms being provided with a series of spaced apertures, vertical guide bars having bent ends passing through said apertures and detachably secured to said cross-arms, a plurality of beams adapted to be secured to the sides of an animal and vertically guided by said rods, and means for raising said beams.

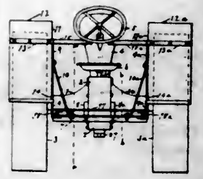


1,375,190. NECKTIE. CHARLES W. WALLER, Chicago, Ill. Filed Feb. 21, 1919. Serial No. 278,330. 3 Claims. (Cl. 2—11.)

3. A four-in-hand fabric necktie comprising an outer flap provided with an aperture which penetrates the face of said outer flap, said aperture adapted to receive the jaw of a tie clasp, and the extreme lower portion of said outer flap provided with a finger.

1,375,191. CLUTCH. TIMOTHY WALSH, Philadelphia, Pa. Filed June 23, 1919. Serial No. 306,001. 5 Claims. (Cl. 192—60.)

1. A clutch of the character described including a body portion having chambers therein extending in the direction of their lengths toward a peripheral surface of said body portion; plungers operative within said chambers, said peripheral surface of the body portion having finished recesses therein respectively intercepting said cham-

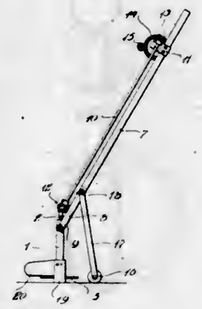


bers; and a flanged collar having finished portions adapted to slidably enter and closely fit said recesses to close the outer ends of said chambers; substantially as described.

1,375,192. DYNAMO. ERNEST ANSLEY WATSON, Coventry, England, assignor to The C. L. I. Manufacturing Company Limited, Birmingham, England. Filed Mar. 31, 1920. Serial No. 370,178. 4 Claims. (Cl. 290—41.)

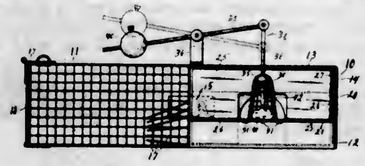
2. In current generating apparatus for use on motor vehicles, the combination comprising a rotary shuttle type current generating armature, a permanent magnet for providing the armature field, a high tension ignition coil consisting of primary and secondary windings, a storage battery receiving current from the armature, and means for periodically short circuiting the armature and during the short circuit interval permitting current to flow from the battery to the ignition coil, substantially as described.

1,375,193. TRACTOR-FENDER. GUSTAVE WENZELMANN, Galesburg, Ill. Filed May 10, 1919. Serial No. 296,218. 6 Claims. (Cl. 280—157.)



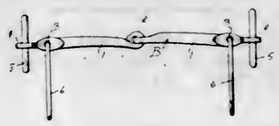
2. A device of the character described comprising a main cross bar, rigidly attached behind and somewhat below the housing of the rear axle of a tractor; braced uprights erected at the ends of said bar; a sheet metal fender attached to, and stiffened and supported by, each of said uprights, said fenders guarding the upper portion of the main wheels of the tractor; and an adjustable cantaliver floor, supported by coaction of said cross bar and said axle housing, and adapted to serve as a mounting step for the operator as well as a guard for the lower part of the main wheels and the space between them back of said main cross bar.

1,375,194. ELECTRIC HEATER. ALFRED G. WERNER, Omaha, Nebr. Filed Dec. 30, 1919. Serial No. 348,322. 2 Claims. (Cl. 219—34.)



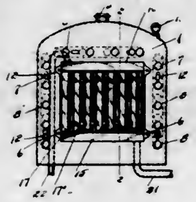
1. An electric heater comprising a base, said base having a downwardly extending flange for supporting the base spaced from a table, upwardly and inwardly extending wires having their lower ends secured to the flange, said wires having their upper ends merging to an apex and embedded in an outwardly extending threaded plug, and a heating unit carried by the base.

1,375,195. GRASS-TRIMMER. EDWARD WIKSTROM, Lowell, Mass. Filed Sept. 24, 1919. Serial No. 325,999. 2 Claims. (Cl. 56—239.)



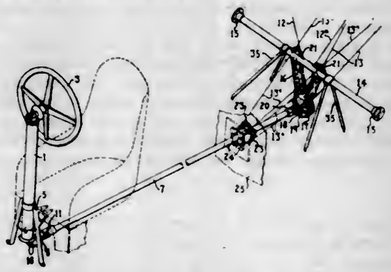
1. A device of the class described comprising a frame of stirrup-shape, the lower cross piece of the frame having a portion of one edge curved to provide a cutting edge, a vertically arranged shaft journaled in said frame and having limited longitudinal movement, a spring on the shaft for pressing the same downward, cutters on the lower end of said shaft, a handle, means for adjustably connecting the handle with the upper part of the frame at one side thereof, a shaft carried by the handle, means for rotating the same and gears connecting the shaft on the handle with the cutter shaft.

1,375,196. TRAP. WALTER W. WILHOIT, Louisville, Ky. Filed Jan. 26, 1920, Serial No. 354,223. Renewed Mar. 5, 1921. Serial No. 449,865. 2 Claims. (Cl. 43—68.)



1. In a trap, an outer box, an inner box, a frame detachably engaged with said inner box, a rod connected with said frame and extending upward through an opening in the top of the outer box, an arm fulcrumed on the top of the outer box, said rod pivotally connected to one end of said arm, a weight on the other end of the arm adapted ta uphold the inner box, a wall of each box having an opening, said openings coinciding when the inner box is raised.

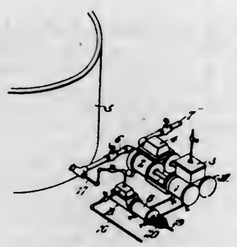
1,375,197. BRIDLE-BIT. JEFFERSON G. WRIGHT, Connell, Wash., assignor of one-third to William F. Steinmeyer, Eltopia, Wash. Filed May 31, 1919. Serial No. 300,849. 1 Claim. (Cl. 54—7.)



A bridle bit for connecting horses abreast comprising a snaffle bar composed of a pair of sections having their inner ends pivotally connected, each of said sections being provided in the free end thereof with a pair of perpendicularly related and spaced openings, one opening of each of said pairs being disposed at the end of its respective section, rings pivotally mounted within said openings and shiftable circumferentially therein, the innermost ring of each section being of a diameter materially in excess of that of the outer ring and being adapted for the reception of the cheek strap of a bridle, the rings mounted in the openings at the ends of said sections being adapted for the reception of reins for connecting the heads of the horses together.

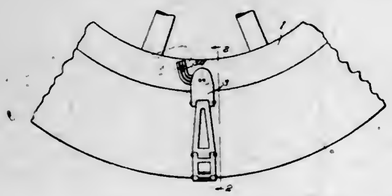
1,375,198. AUTOMOBILE RADIATOR-COVER. MICHAEL ZIEGLER, Bay City, Mich. Continuation of application Serial No. 282,815, filed Mar. 15, 1919. This application filed Dec. 12, 1919. Serial No. 344,453. 8 Claims. (Cl. 257—132.)

1. A temperature regulating attachment for automobile radiators including a cover for attachment to the front of the radiator and forming a compartment thereat and having an opening in its front wall, shutters pivotally mounted on the hood for controlling the passage of air through the opening, said shutters having passages therethrough, and means for conducting a heating medium through said shutters.



1,375,199. AEROPLANE CONTROL. PAUL G. ZIMMERMANN, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, New York, N. Y., a Corporation of New York. Filed May 14, 1920. Serial No. 381,276. 10 Claims. (Cl. 244—29.)

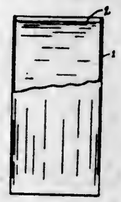
7. In a flying-machine, the combination of a fore-and-aft shaft capable of both rotational and translational



movements extending rearward from the operator's place, operating means at the front of the shaft, and two control connections taken from the rear of the shaft operated by the rotational and translational movements thereof, respectively.

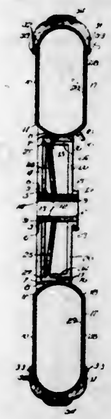
1,375,200. PUMPING APPARATUS. WILLIAM S. BARNICKEL, St. Louis, Mo. Filed Aug. 5, 1918. Serial No. 248,423. 4 Claims. (Cl. 103—79.)

1. A pumping apparatus, comprising a reciprocating proportional pump provided with means for enabling the volume or quantity of the stream pumped by same to be increased or diminished, a main pump of the reciprocating type, and conduits separate and distinct from the supply and exhaust pipes of said main pump that lead from the opposite ends of the cylinder of said proportional pump to the corresponding ends of the cylinder of the main pump.



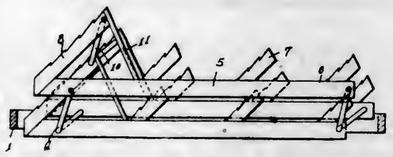
1,375,201. ANTISKID DEVICE. JOSEPH R. BAUDE, Chicago, Ill. Filed Mar. 1, 1920. Serial No. 362,496. 2 Claims. (Cl. 152—14.)

1. An anti-skid device for automobiles comprising a plurality of separable links, each link being secured at an end to the adjacent end of the next successive link, and means for detachably securing the remote ends of the end links to opposite sides of a felly of an automobile wheel, said means comprising a guiding and retaining member fastened to a side of the felly and closed at one end, a guide member secured to an end link and adapted to be received by said guiding and retaining member, a plate secured to the opposite side of said felly, said plate having a pair of upright extensions spaced apart to receive the tapered end of an end link, and a pin adapted to be inserted through registering openings through said upright extensions and the end of said end link.



1,375,202. DRY CELL. RAYMOND C. BENNER and HARRY F. FRENCH, Fremont, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed Aug. 14, 1919. Serial No. 317,580. 6 Claims. (Cl. 204—29.)

6. In dry cells, a zinc container electrode having a uniform coating of flour paste on the inside and bottom thereof extending only to within a short distance of the open end of the can and having an uncoated upper edge, said



paste being cooked onto the surface of the zinc, and a seal in the upper end of the can adjoining the uncoated edge.

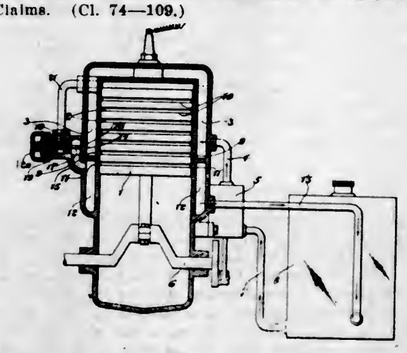
1,375,203. VEHICLE-WHEEL. MAX BENZ, South Chicago, Ill. Filed June 7, 1920. Serial No. 387,148. 3 Claims. (Cl. 152—29.)

2. A vehicle wheel comprising a hub, a disk rigidly mounted on said hub adjacent one end thereof, a laterally extending annular felly member formed integrally with said disk, a second disk feathered on said hub and slidable longitudinally thereabong, said second named disk being formed with a laterally extending annular felly member, a third disk removably secured to the hub, said third named disk having an integral annular extension arranged to extend toward said second named disk to limit the slidable movement of the latter along the hub, means mounted on said hub and engaging with said second named felly member for yieldingly permitting a limited movement of said second named disk away from said first named disk, a rim flange formed integrally with each of said felly members, a pneumatic tube having its inner periphery mounted upon said felly members and having its sides disposed between said rim flanges, a solid tire concentrically superposed upon said pneumatic tube, and means preventing lateral displacement of said solid tire.

1,375,204. STRAW-FEEDER. ARNOLD BOHNENBLUST, Riley, Kans. Filed Apr. 26, 1920. Serial No. 376,601. 2 Claims. (Cl. 193—60.)

1. In a feeder of the class described, a support; first shafts journaled in the support and having cranks; feeding members extended between the first shafts and mounted on the cranks; and a second shaft independent of the support and having cranks mounted in the feeding members, the side portions of the cranks of the second shaft constituting means for spacing the feeding members.

1,375,205. COMBINATION-FAUCET. TANAS BUDZINSKY, New York, N. Y. Filed Mar. 15, 1920. Serial No. 365,715. 4 Claims. (Cl. 251—88.)

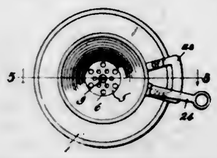


1. A combination faucet comprising an upper casing having inlet channels therein, a disk rotatably mounted on the under side of said casing, the mouths of said channels lying above said disk and at unequal distances from the center thereof, means for rotating said disk, a stationary disk mounted underneath said rotatable disk and having holes therein directly under the said mouths of said channels, and a plurality of spaced apart holes in said rotatable disk.

1,375,206. MANUFACTURE OF REINFORCED OR ORDINARY CONCRETE PIPES BY CENTRIFUGAL FORCE. PAUL LOUIS MAURICE CARON, Paris, France. Filed June 21, 1920. Serial No. 390,604. 3 Claims. (Cl. 25—30.)

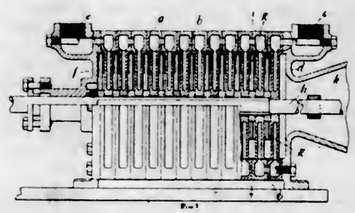
1. A mold for concrete pipes and the like made by a centrifugal machine, adapted to be rotated for the purpose of applying the liquid concrete against its wall by centrifugal force, said mold having a separate flexible lining or jacket fitting its interior to render the same tight and constructed of a non-metallic material which is substantially non-adherent to concrete and which is sufficiently pliant to become unwound and detached progressively from the concrete.

1,375,207. ART OF PACKING PISTONS. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey Rotary Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 26, 1919. Serial No. 292,933. 8 Claims. (Cl. 74—109.)



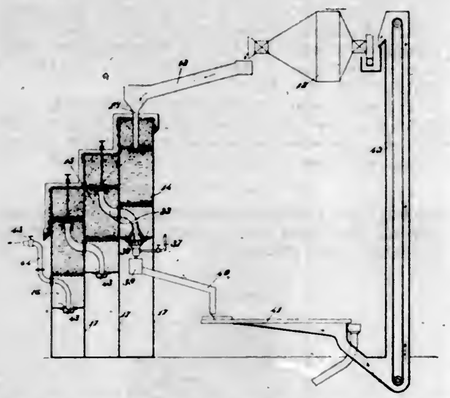
1. The method of packing a piston having circumferential grooves therein, which consists in forcing packing liquid into said grooves from an external source of supply, and varying the pressure of the liquid during reciprocation of the piston.

1,375,208. PROCESS OF REDUCING THE VISCOSITY OF VISCOUS SOLUTIONS OF NITROCELLULOSE AND OTHER ESTERS. OLOF CARLSSON and EDVIN THALL, Stockholm, Sweden, assignors to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 4, 1919. Serial No. 342,519. 4 Claims. (Cl. 134—79.)



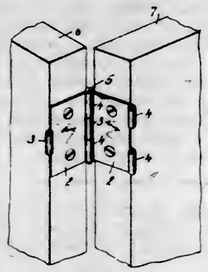
1. Process of reducing permanently the viscosity of solutions of cellulose esters, consisting in heating the solutions to a temperature between 60° C. and the temperature at which the compound in question is decomposed.

1,375,209. TELEPHONE-MOUTHPIECE. JOHN CHEFER, Chester, Pa. Filed Aug. 31, 1920. Serial No. 407,076. 2 Claims. (Cl. 179—188.)



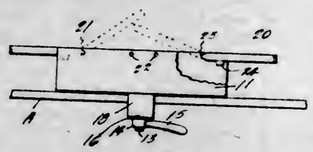
1. The combination with a mouthpiece section, an apertured disk in engagement therewith and held against rotation thereby, and an inner ring threaded upon said section and held against rotation by the disk, of a second apertured disk pivotally connected to the first named disk, a radial lug thereon having a limited sliding movement within the inner ring, an intermediate ring having an aperture for the reception of said lug and having an annular series of openings, said intermediate ring being revoluble upon the inner ring, an outer ring adjustable angularly upon the intermediate ring, means carried thereby for engagement with any one of the annular series of openings for holding the outer and intermediate rings against relative movement, an operating arm extending from the outer ring, and an inner mouthpiece section projecting into and secured to the inner ring, said disk being confined between the sections of the mouthpiece.

1,375,210. COOLER. WILLIAM CLAYTON, Liverpool, and GERALD NODDER, Wallasey, England. Filed Mar. 26, 1920. Serial No. 369,061. 1 Claim. (Cl. 257—85.)



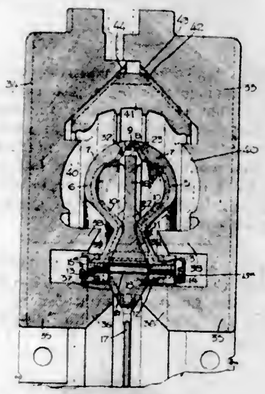
In coolers for use in the manufacture of edible fats, the combination comprising a plurality of flat hollow members, a pair of end covers, passages in the said members communicating alternately on opposite sides of the longitudinal axis of the members, inlet and outlet passages in the end covers communicating with the passages in the said members, a longitudinal shaft, and scrapers on the shaft rotatable in compartments formed by the said members, and passages in the said members communicating with the said compartments alternately on opposite sides of the longitudinal axis and with inlet and outlet apertures, substantially as described.

1,375,211. APPARATUS FOR SEPARATING OR CONCENTRATING ORES. DAVID COLE, Morenci, Ariz., assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed Aug. 3, 1915. Serial No. 43,442. 18 Claims. (Cl. 83—85.)



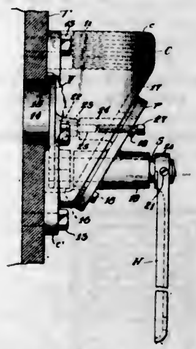
10. The combination with a grinding mill, of a frothing classifier into which substantially all of the material discharged from said mill is received, said frothing classifier having provision for removing, during the frothing operation therein, oversize material delivered thereto, and means whereby said oversize material may be returned to said mill for regrinding.

1,375,212. HINGE. LEONARD S. CRONE, New York, N. Y. Filed Dec. 4, 1920. Serial No. 428,204. 4 Claims. (Cl. 16—106.)



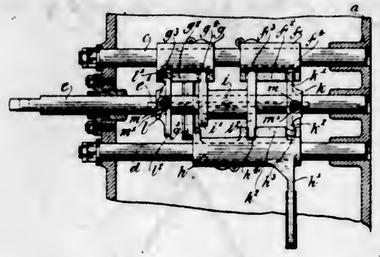
1. A hinge designed to be swung about either of two axes, comprising two leaves, knuckles at opposite edges of said leaves, the knuckles on one leaf designed to cooperate with corresponding knuckles on the other leaf, and a removable pintle designed to cooperate with either set of knuckles to form an axis about which the hinge may be swung, the removal of the pintle necessitating no change in the relative position of the leaves.

1,375,213. ICE-CARRIER. JOHN J. CRONIN, Dallas, Tex. Filed July 22, 1920. Serial No. 398,197. 3 Claims. (Cl. 224—29.)



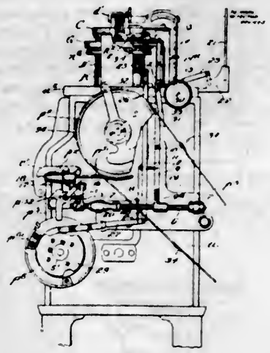
1. In a carrier to be arranged upon the running board of an automobile or the like, comprising a base adapted to be supported by the running board and projecting laterally therebeyond, said base having upstanding holding means, a screw secured to the base and depending therefrom adjacent the outer edge of the running board, a separate clamp arm having an opening between its ends to receive the screw, with its inner end engaging beneath the running board and its outer end projecting outwardly beyond the running board and engaging the base near its outer edge, and a nut carried by the lower end of the screw.

1,375,214. EXPANSIBLE CORE AND MOLD THEREFOR. BURGESS DARROW, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 28, 1916. Serial No. 128,226. 15 Claims. (Cl. 18—45.)



15. A vulcanizing apparatus including relatively movable mating mold members, annular mating core members receivable between said mold members, and means having movement transverse to that of the mold members and actuatable by movement of the mold members for separating the core members without changing the diameter of the core.

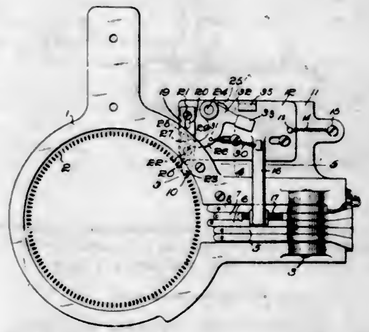
1,375,215. VALVE. PATRICK HENRY DAVIS, New York, N. Y., assignor to The Hamilton-Low Company, Jersey City, N. J. Filed Sept. 16, 1919. Serial No. 324,190. 2 Claims. (Cl. 251—18.)



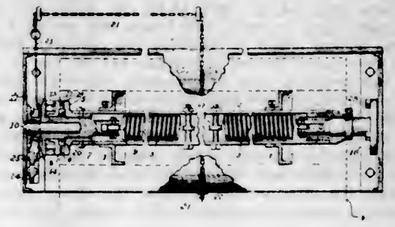
1. A valve comprising a casing having inlet and outlet openings therein, a valve controlling one of the openings and mounted for lateral and oscillatory movements, a beveled extension formed on said valve, a bored extension on said casing, a cam disposed in the path of movement of said beveled extension, pegs carried by the cam and slidable in said bored extension, a pin also slidable in said bored extension into contact with said cam and a screw threaded in the casing and engageable with said pin for adjusting the position of said cam.

1,375,216. SPEED-CHANGE MECHANISM. MAXIMILIAN C. FRINS, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 16, 1920. Serial No. 396,699. 9 Claims. (Cl. 74—58.)

1. Change speed mechanism comprising slidable shifter forks, a selector shaft, locking members for the forks feathered on the shaft and means to hold the locking members against displacement.



1,375,217. STOP-MOTION AND ALARM MECHANISM FOR KNITTING-MACHINES. AUGUSTIN GAGNÉ, Central Falls, R. I., assignor, by mesne assignments, to Hemphill Company, Pawtucket, R. I., a Corporation of Massachusetts. Filed Sept. 13, 1917. Serial No. 191,098. 9 Claims. (Cl. 66—7.)



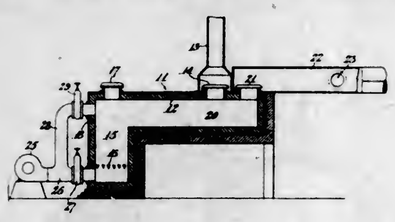
1. Stop-motion and alarm devices for knitting machines comprising a shipper, a spring-actuated rockshaft for actuating said shipper to unship the driving-power, a detent for holding said rockshaft restrained in readiness to act in moving said shipper, a detector adapted to be actuated by a needle which remains unretracted and through which the detent is actuated to release the rock shaft, and an alarm-device having a striker-device connected with said detent and called into action by such actuation of the detent.

1,375,218. STOP-MOTION FOR KNITTING-MACHINES. EDSON S. HINELINE, Apponaug, R. I., assignor to Bodell & Co., Providence, R. I., a Firm composed of Joseph J. Bodell, Frederick B. Wilcox, Louis C. Gerry, Frederick Bodell, Harold C. Fields, and Antonio Lazo. Filed Mar. 20, 1920. Serial No. 367,315. 13 Claims. (Cl. 66—7.)

8. A knitting machine having a series of needles, a movable housing or support, an emergency device carried by the latter, a movable member carried by said movable housing or support and adapted to be engaged by and moved by a defective needle, and means for periodically moving said housing or support so as to withdraw said movable member from functioning relation with respect to the needles.

1,375,219. DOOR-OPERATING MECHANISM. HOWARD A. JOHNSON and FRANCIS T. ETHEREDGE, Norfolk, Va. Filed Mar. 19, 1920. Serial No. 367,230. 7 Claims. (Cl. 189—58.)

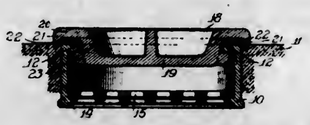
1. A counterbalance for flexible doors and the like, comprising in combination, a rotatable hollow shaft or tube, a torsion spring having one end fixed to said tube for producing a counterbalancing force on said tube, a rotatable sleeve to which the other end of said spring is attached, means for fixing the normal position of said sleeve, devices for releasing said fixing means to allow said sleeve to rotate under the force of said spring, means for transferring the force of said spring and sleeve when released to said tube to cause the sleeve to rotate in unison, and means to stop the rotation of said sleeve at a predetermined point to apply a reduced counterbalancing force.



1,375,220. COMPOSITION FOR REPELLING INSECTS. JEAN IGNAZ LEIST, Brooklyn, N. Y. Filed Sept. 13, 1919. Serial No. 323,642. 2 Claims. (Cl. 167—9.)

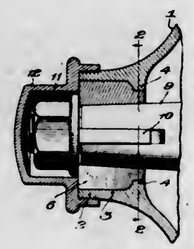
1. The herein-described composition of matter consisting of a major portion of magnesium carbonate and a minor portion of thymol.

1,375,221. APPARATUS FOR HEATING ORCHARDS. THADDEUS LOWE, San Marino, Calif. Filed Mar. 8, 1919. Serial No. 281,503. 4 Claims. (Cl. 126—59.5.)



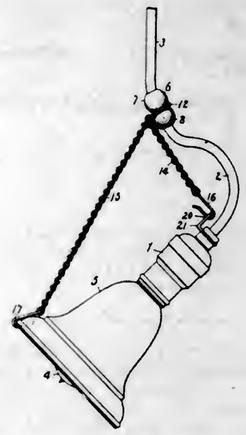
1. An apparatus for heating orchards and the like comprising a furnace having an elongated combustion chamber, means for delivering air under pressure to said

furnace below the fuel, means for delivering air under pressure to said elongated combustion chamber above



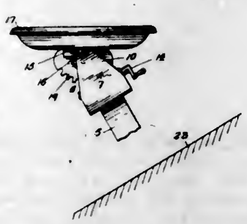
the fuel, a system of heat conducting pipes connected to said combustion chamber, and an exhauster connected to the outer open end of said conducting pipes.

1,375,222. DRAIN-FITTING. WILLIAM F. J. LUTZ, Chicago, Ill. Filed Jan. 16, 1918. Serial No. 212,047. 1 Claim. (Cl. 137—13.)



A drain fitting comprising a ring open at both ends and adapted to fit at its top end substantially flush with the floor, in an opening in which the ring is seated, said ring being provided interiorly at the top of its open end with lugs, a cap to cover said fitting and having a peripheral hooked flange to compress and confine a gasket at the floor level between the flange and the top of the ring, and provided with a downward extension having projections adapted for cam face contact with said lugs to compress the gasket and to lock the cap on the ring when the cap is rotated, said ring being provided at its bottom with an internal screen support and a screen supported thereon and having peripheral notches to pass over said top interior lugs, whereby the screen may by rotation be removed from and locked within the ring.

1,375,223. INTERCHANGEABLE HUB FOR MOTOR-VEHICLES. ELMER E. MCINTYRE, Pittsburgh, Pa. Filed Aug. 9, 1919. Serial No. 316,410. 4 Claims. (Cl. 287—53.)

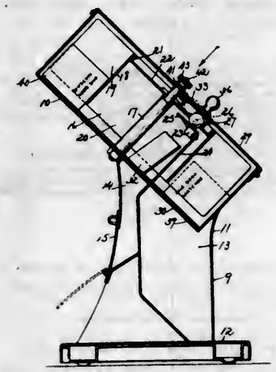


1. As a new article of manufacture, an auxiliary bushing provided with key-ways or channels in the axle-box thereof, and having lugs or keys integral therewith at one of its annular ends, said bushing being designed for emergency use on the driving shaft of the rear axle of a motor vehicle of the standard construction, and adapted to replace the anti-friction bearings in the outer or reduced portion of a hub of a standard wheel designed for use on the front axle of a motor vehicle, and to be removably secured on the said driving shaft of the said rear axle, to provide for the substitution of such front wheel for the usual standard rear wheel upon the rear axle of the standard construction.

1,375,224. LAMP-ADJUSTER. WILLIAM S. MACLEWEE, Trenton, N. J., assignor to Carrie Howell MacLewee, Trenton, N. J. Filed Oct. 25, 1918. Serial No. 259,646. 1 Claim. (Cl. 240—88.)

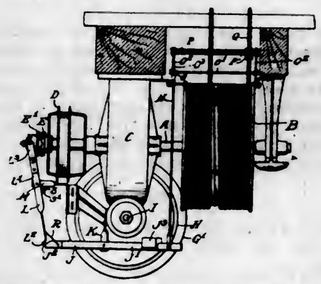
An electric lamp or the like, a flexible conductor attached thereto, a sleeve adapted to be mounted on the said conductor, said sleeve consisting of two spherical members, one of said spherical members having a screw-threaded projection thereon, the other one of said spherical members having a screw-threaded recess formed therein adapted to receive the said projection on the first mentioned spherical member, a ring loosely mounted between the said spherical members and means carried by the said ring for holding the lamp in various positions.

1,375,225. SEAT CONSTRUCTION FOR FARMING-MACHINES. GUY MARSHALL, Calgary, Alberta, Canada. Filed Nov. 26, 1920. Serial No. 426,384. 1 Claim. (Cl. 155—121.)



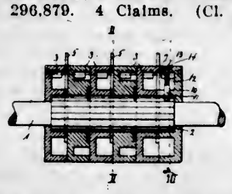
In a seat construction of the class described, a frame having upstanding side and end members, a plate rotatably mounted in the top portions of said end members, a seat mounted on said plate, a gear segment connected with the bottom of said plate and extending downwardly between the end members of the frame, a shaft mounted between the upstanding side members and provided with a worm which coöperates with said gear segment, and means for turning said shaft and said worm.

1,375,226. VENDING-MACHINE. CHARLES MAY, New Britain, Conn. Original application filed Nov. 6, 1918, Serial No. 261,348. Divided and this application filed May 28, 1919. Serial No. 300,457. 12 Claims. (Cl. 211—8.)



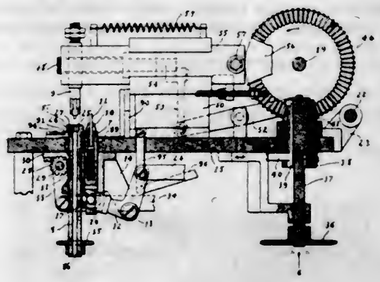
1. A vending machine comprising a case, a shaft within said case, a carrier rotatably supported by said shaft, a

standard located underneath and supporting said case at one side of the center thereof and also supporting said



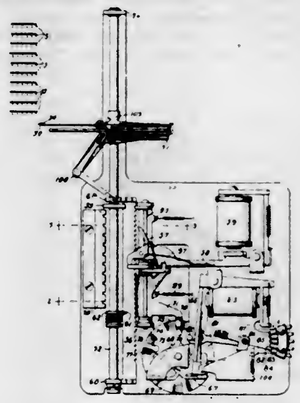
case and its shaft in an inclined position, and means for controlling the operation of said carrier.

1,375,227. SAFETY MECHANISM FOR ELEVATORS. WILLIAM MELVIN, Wilmington, Del. Filed Sept. 22, 1920. Serial No. 411,898. 5 Claims. (Cl. 187—28.)



1. A safety device for elevators comprising mechanism for shifting the belts to neutral position, a clutch member secured to said device, a sliding clutch member rotating with the drum, a lever for actuating said clutch member yieldingly held in non-operative position, a weighted lever for actuating the clutch lever with its working end located in such relation to the clutch lever that its upward movement will contact with and actuate the clutch lever to engage the clutch members and means for holding the weighted lever in non-operative position including a supporting lever normally supported by contact with the taut elevator cable and free to drop when the cable breaks or slackens.

1,375,228. FEED-ROLL FOR GRAIN AND SEED CLEANING MACHINES OR THE LIKE. MARIUS JOHAN NIELSEN, Vesteraaby, Denmark. Filed May 13, 1919. Serial No. 296,879. 4 Claims. (Cl. 83—44.)

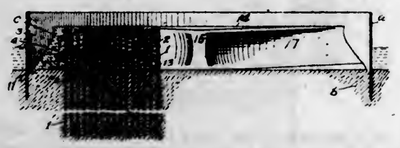


1. A feed roll for grain cleaning machines, comprising a shaft, a plurality of disk-shaped members revoluble about said shaft as a unit, means for locking said members to the shaft for rotation therewith and releasable to permit independent rotation of said members as a unit, each of said disk members being provided with a pair of apertures extending inward from its periphery and an adjustable bar guided in each of said apertures, the shaft and bars having coöperating means for adjusting the latter when the shaft and disk members are independently rotated.

1,375,229. MACHINE FOR ATTACHING STRINGS TO ENVELOPS AND THE LIKE. ABRAHAM NOVICK, New York, N. Y., assignor to F. L. Smithe Machine Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 8, 1919. Serial No. 309,436. 8 Claims. (Cl. 93—61.)

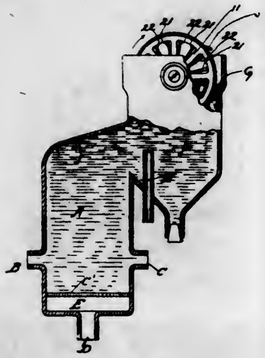
1. In a machine of the character described the combination of two adjacent parallel plungers and a third parallel plunger, means for shifting said third plunger into coaxial alinement with each of the other plungers one at a time, and means for rotating one of said adjacent plungers while it is in alinement with the third plunger.

1,375,230. TELEPHONE-EXCHANGE SYSTEM. JOHN NEWBERRY REYNOLDS, Greenwich, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 29, 1917. Serial No. 158,190. 13 Claims. (Cl. 179—27.5.)



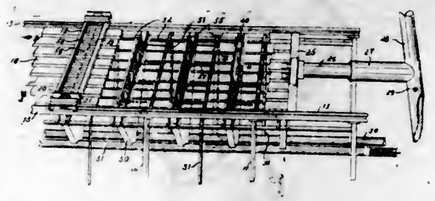
1. In a switching mechanism, a bank comprising a plurality of superimposed flat multiple contact units, each of said units comprising a plurality of sets of conductors, contact surfaces on said conductors situated in rows transversely of said units, contact brushes adapted to be directively moved in one direction into juxtaposition with said units individually and further moved in a second drection transversely of said units to hunt over said conductors and engage any of the said sets of conductors in a selected unit individually.

1,375,231. PIN-ON BUTTON. ANGELO C. ROVELLI, Philadelphia, Pa., assignor to Pivot Button Company, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed May 10, 1917. Serial No. 167,665. 2 Claims. (Cl. 24—105.)



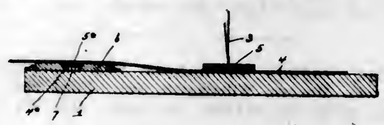
1. A stud for pin-on buttons consisting of a continuous wire and comprising a threaded cylindrical shank having a pointed end, and a circular coil constituting a flat head and disposed at right angles to and concentric with the shank, substantially as and for the purposes described.

1,375,232. BREAKWATER AND PIER AND METHOD OF MAKING THE SAME. ALLAN C. RUSH, Los Angeles, Calif. Filed June 26, 1916. Serial No. 106,075. 3 Claims. (Cl. 61—4.)



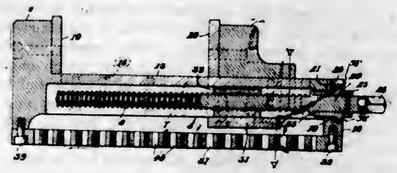
1. A pier having a forward projection and rearwardly extending curved faces sloping upwardly from the front toward the rear, the lower edge of said upward slope being higher at the ends of said curved faces than at said projection so that the water impelled by wave action will be lifted and at the same time deflected laterally to neutralize its own momentum.

1,375,233. ORE-CONCENTRATION PROCESS. WALTER A. SCOTT, Chicago, Ill., assignor to Mineral Separation, North American Corporation, a Corporation of Maryland. Filed Sept. 10, 1917. Serial No. 190,438. Renewed Sept. 15, 1920. Serial No. 410,486. 5 Claims. (Cl. 83—85.)



1. A process of concentrating ores comprising the operations of introducing a gas into an ore pulp, removing the gas from the mineral-carrying bubbles so formed before said bubbles reach the surface of the pulp, and separating the mineral carried by the bubbles from the remainder of the ore.

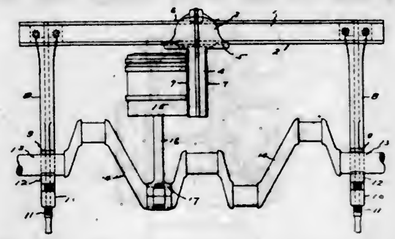
1,375,234. CARBON-PRODUCING APPARATUS. ELBERT W. SHULL, Cowley, Wyo., assignor of one-half to K. E. Anderson, Cowley, Wyo. Filed May 3, 1919. Serial No. 294,601. 9 Claims. (Cl. 134—61.)



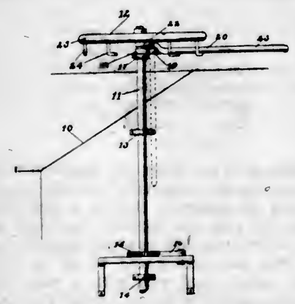
3. In carbon-producing apparatus, a series of hollow sections joined together, and carriages for said sections.

1,375,235. BUTTON-SEWING MACHINE. EUGENE SISSON, Hudson, N. Y. Filed Apr. 12, 1920. Serial No. 373,450. 2 Claims. (Cl. 112—115.)

1. In a button-attaching machine, the combination with button-attaching mechanism; of a gage provided with an opening with an upwardly facing mouth adapted to receive both a depressed portion of a flexible sheet and a button attached thereto, said gage being so located that said opening is at a distance from the button-attaching mechanism corresponding to the desired distance from one button to a neighboring button on said sheet.



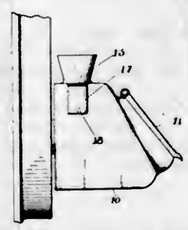
1,375,236. VISE. JOSEPH K. SKINDER, Kenosha, Wis. Filed Feb. 19, 1920. Serial No. 359,889. 9 Claims. (Cl. 90—61.)



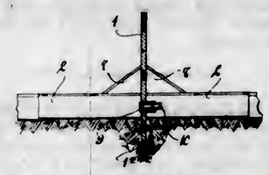
1. A vise comprising a base having a jaw rigid on one end thereof and provided with a longitudinal groove in its under side, a depending flange rigid upon the other end of said base and provided with a central aperture, a bushing secured within said aperture, a feed screw journaled in said bushing and extending toward said jaw within the longitudinal groove of the base, a movable jaw slidably mounted upon said base and provided with depending flanges engaging the opposite sides of said base, a transverse plate secured to said flanges and arranged beneath said base, and a feed nut rigidly secured upon the upper face of said plate within the longitudinal groove of the base and through which said feed screw is threaded.

1,375,237. APPARATUS FOR GAGING ENGINE-PISTONS. LOUIS R. SPENCER, Hartford, Conn. Filed Oct. 14, 1919. Serial No. 330,533. 7 Claims. (Cl. 33—180.)

1. An apparatus for gaging pistons comprising a bar with a straight edge, supporting legs depending from the bar, means at the ends of the legs for fixing them in position with the straight edge of the bar at right angles to the surface to be gaged, and a gaging arm with a straight edge extending at right angles to the straight edge on the bar, said arm being movable transversely back and forth toward and from said supporting legs along the entire length and off the ends of the bar without disturbing the bar or altering its position.

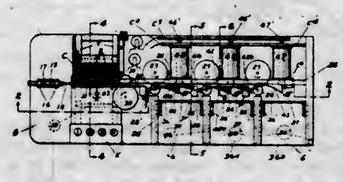


1,375,238. ATTACHMENT-LEVER FOR BRAKE STAVES AND WHEELS. HENRY C. STOKES, Sumter, S. C. Filed Sept. 29, 1920. Serial No. 413,509. 3 Claims. (Cl. 74—115.)



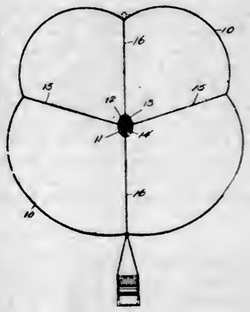
1. A lever attachment for brake staves and wheels comprising a lever pivotally supported on a loose collar on the brake staff below the wheel, said lever having one end adapted to extend beyond the periphery of the brake wheel, means on its other end adapted to engage the brake staff, and means for connecting said lever with the wheel.

1,375,239. RAILWAY JOURNAL-BOX. HENRY C. STOKES, Sumter, S. C. Filed Sept. 29, 1920. Serial No. 413,510. 1 Claim. (Cl. 64—22.)



A journal box formed with a receptable on its top for cooling liquids and a container on one of its sides for lubricating oil as an integral casing structure for journal members, and provided with passages leading from the receptacle and container to the interior thereof as set forth.

1,375,240. IRRIGATION-REGULATOR. FRANK SULLIVAN, Cusick, Wash. Filed Oct. 9, 1919. Serial No. 329,566. 1 Claim. (Cl. 61—29.)

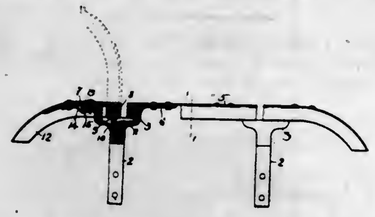


The combination in an irrigation regulator, of a board adapted to be driven into the bottom of a ditch and form an abutment, said board having an opening therethrough, detachable means for insertion into said opening for varying the area of said opening to control passage of water therethrough, flexible aprons attached to said board and adapted to form lateral troughs in the ditch, and bracing elements between said board and aprons.

1,375,241. CARD-DISTRIBUTING MACHINE. ARTHUR S. TREW, Portland, Oreg. Filed Jan. 8, 1920. Serial No. 350,252. 13 Claims. (Cl. 214—11.)

1. In a card distributing machine, in combination, a container for cards, an ejector working therein, a series of card receiving pockets, with a straight horizontal card passageway formed from said container alongside of said pockets, a series of feed rollers arranged in pairs along said passageway and adapted to feed the cards along said passageway from said container, with means for driving the same, switch members for said card receiving pockets adapted to be moved across said passageway to direct cards into said pockets, a series of keys corresponding to said receiving pockets, and operating connections from said keys to said ejector and said switch members, whereby the movement of the key in one direction operates said ejector to eject a card and also sets the desired switch member.

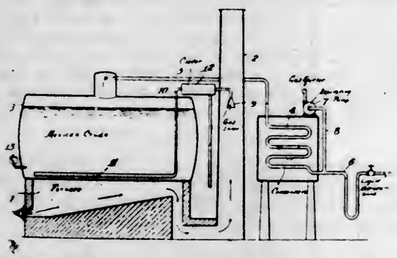
1,375,242. AIRSHIP. RALPH H. UPSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 25, 1918. Serial No. 259,640. 17 Claims. (Cl. 244—3.)



1. An airship of the non-rigid type comprising in combination with a balloon envelop, a longitudinal com-

pression element disposed interiorly of the envelop and in the approximate longitudinal center thereof, said element comprising longitudinally disposed mating connected sections, and means connecting the envelop with the compression element throughout the length of said compression element.

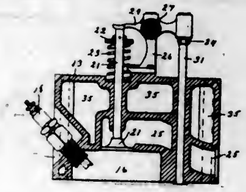
1,375,243. EXPLOSIVE. GUILLAUME WEBER, Hayange, France, assignor to Societe Les Petits Fils De Francois De Wendel Et Cie., Paris, France. Filed Sept. 27, 1919. Serial No. 326,973. 4 Claims. (Cl. 52—1.)



1. An explosive containing a combustible organic substance adapted to absorb liquid air, and blast furnace dust.

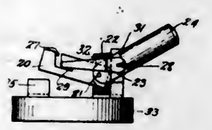
1,375,244. BUMPER FOR MOTOR-CARS. ROLVIN S. WHITNEY, Lewiston, Me. Filed Aug. 6, 1919. Serial No. 315,595. 2 Claims. (Cl. 293—55.)

1. In a bumper for motor cars, the combination of a transverse bar, a pair of hangers for securing said bar to the car, each of said hangers terminating in a recessed head an end section hinged by its inner end in each of said recessed heads and springs within said heads for retracting said sections to their normal position.



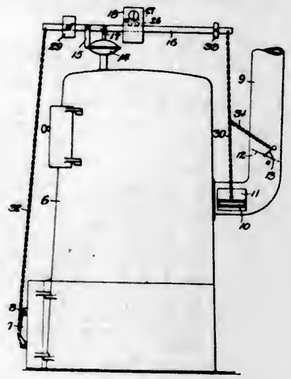
1,375,245. PROCESS OF DISTILLING HYDROCARBONS. WILLARD C. AVERILL, Jr., Houston, Tex. Filed July 12, 1919. Serial No. 310,334. 1 Claim. (Cl. 196—27.)

The method of simultaneously producing pale lubricating oil and distillates including gasolene from crude petroleum oil containing asphalt forming material in material quantities and having high sulfur content as exemplified by Gulf Coast crude petroleum, comprising heating the bottom of a still containing said crude oil directly by products of combustion, cooling a portion of said products after having used the same under the still, passing said cooled portion through the oil in said still, while heated as aforesaid, and subsequently condensing out the hydrocarbon vapors from said portion.



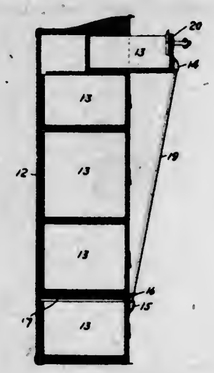
1,375,246. OVERHEAD VALVE ATTACHMENT FOR FORD MOTORS. ROLLIN J. BARRETT and GEORGE E. BEAN, Mitchellville, Iowa. Filed Feb. 10, 1917. Serial No. 147,777. 1 Claim. (Cl. 123—173.)

A valve-in-the-head block for replacing the heads of L-type motors, having bores coincident with those of the cylinders of the motor and provided with ports, a V-shaped recess in one side of the block extending the length thereof, said block also having spark plug openings in the bottom wall of the recess leading direct to the block bores, the axes of said openings being inclined



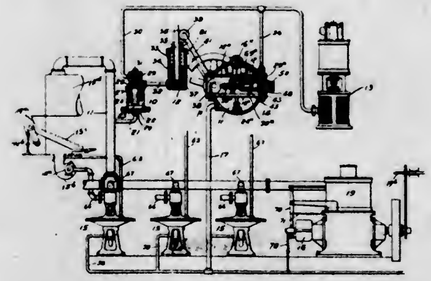
from the vertical, a water passage interposed between the other wall of the recess and said ports, valves for the ports having stems slidable vertically through the block, springs seated in cavities in the top of the block and about the stems for urging the valves closed, and means on the block for opening the valves.

1,375,247. MECHANICAL MOVEMENT FOR ELECTRIC SWITCHES, &c. WALTER A. BEHRENS, Brooklyn, N. Y. Filed Dec. 6, 1919. Serial No. 343,056. 10 Claims. (Cl. 74—14.)



1. Mechanism of the character described comprising, a pivoted contact arm, a manually movable operating member supported independently thereof, a compression spring carried by said arm and movable therewith and a link pivotally connected to said manually operable member and engaging said arm and spring so as to compress the spring and operate said arm with a snap action when said operating member is moved beyond a certain point.

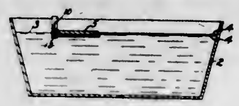
1,375,248. DRAFT-CONTROLLING DEVICE FOR HEATERS. CLARENCE B. BURKE, Plymouth Meeting, Pa. Filed Aug. 24, 1920. Serial No. 405,625. 4 Claims. (Cl. 161—8.)



1. A device of the character described including a lever operative when overbalanced to open the draft of a heater; and a clock operative at a predetermined time to move along said lever to overbalance the same and effect said draft; substantially as described.

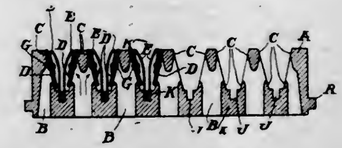
1,375,249. DRAWER-LOCKING DEVICE. GEORGE F. GRUBE, Evanston, Ill., assignor to The Belber Trunk & Bag Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 23, 1920. Serial No. 418,963. 7 Claims. (Cl. 45—94.)

4. A trunk having a drawer compartment, a plurality of drawers slidably mounted therein, means to lock one of the drawers to the trunk body, a locking bar, independent of said locking means, extending in front of other drawers, a seat in which one end of the locking bar is adapted to swing, and a seat carried by the first named drawer in which the other end of the locking bar is adapted to swing, said bar being removable from its seats when the first named drawer is unlocked and pulled outward.



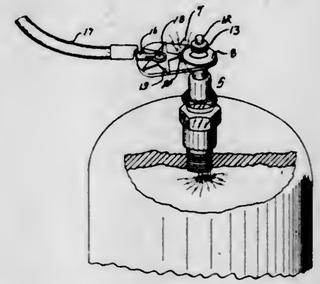
1,375,250. STOKER CONTROL. HERBERT T. HERR, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 6, 1915. Serial No. 60,073. 11 Claims. (Cl. 236—14.)

3. In combination in a boiler control apparatus, a fluid pressure actuated control mechanism for controlling the operation of a boiler accessory, a relay mechanism for delivering actuating pressure to said mechanism, means controlled by variations in the steam pressure of the boiler controlled for controlling the operation of the relay, and means responsive to variations in speed of the accessory for counterbalancing the actuating pressure.



1,375,251. METHOD OF ORNAMENTING SHEET-GLASS. MICHAEL J. HOWARD, Hartford, Conn. Filed June 30, 1920. Serial No. 392,909. 2 Claims. (Cl. 91—68.)

1. A method comprising placing colors on the surface of a liquid, dipping an object into the liquid to cause the colors to be applied to the surface of the object and also to be removed from the liquid, removing the object from the liquid, then applying a coating to the colored surface

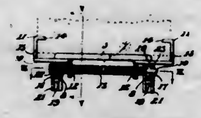


of the object, and then separating the surface of the liquid which has had the colors removed, from the remainder of the surface.

1,375,252. PLATE-VALVE. LESLIE R. HUFF, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 6, 1920. Serial No. 371,596. 10 Claims. (Cl. 251—119.)

1. A plate valve comprising a valve seat having passage ways, flat seating surfaces inclined at an angle to the longitudinal axis of the valve, rigid valve plates adapted to be seated on said inclined surfaces over the passage ways, and spring arms supported on the valve seat and operatively connected to the valve plates, said valve plates assuming positions lying in planes substantially parallel to the longitudinal axis of the valve during the passage of fluid.

1,375,253. SPARK-PLUG INTENSIFIER. ALFRED A. JACKSON, Denver, Colo. Filed Sept. 18, 1919. Serial No. 324,586. 4 Claims. (Cl. 175—183.)

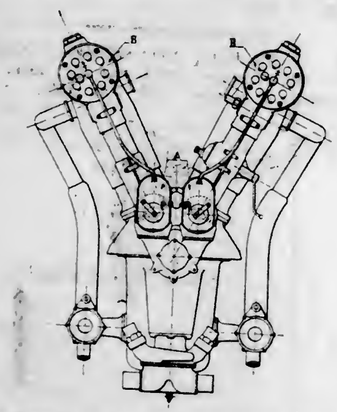


4. A device of the class described, comprising an insulating member, a star-shaped electrode rotatably adjustable thereon, the electrode and the said member being perforated to receive a fastening device, a coöperating terminal also mounted on the said member, the terminal and member being perforated to receive the stem of the spark plug, the insulating member also having a perforation adjacent the gap between the electrode and the terminal.

1,375,254. ICE-CREEPER. ALOIS KRIŽAN, Philadelphia, Pa. Filed Sept. 25, 1920. Serial No. 412,656. 2 Claims. (Cl. 36—64.)

1. An ice creeper embodying a base member of substantially U-shaped inverted form and having longitudinal slots in the horizontal central portion thereof each extending from a point near the center of said central portion to the ends of the latter, the legs of said base member being provided with transverse slots wider than

the aforesaid slots and communicating with the latter, a screw journaled longitudinally beneath the central portion of the base member and supported by the legs of the latter, said screw being of right and left hand form, clamping plates including horisontal portions slidably fitted in the transverse slots of the base member legs and



having depending inner ends with the screw threaded therethrough, and means upon the legs of the base member formed for non-slipping engagement with the ice, said last named means including split sleeves clamped upon the legs of the base member and having serrated lower edges.

1,375,255. STEEL. PETER MACGREGOR and ARTHUR BALFOUR, Sheffield, England. Filed Sept. 18, 1918. Serial No. 254,693. 4 Claims. (Cl. 75—1.)

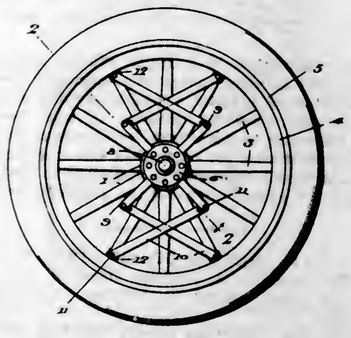
1. An improved steel suitable for cutting and milling tools and as a substitute for high speed steel, containing from 1 to 6 per cent. of nickel, from 1 to 3.5 per cent. of carbon, from 7½ to 20 per cent. of chromium, and from 0.25 to 1 per cent. of manganese.

1,375,256. IGNITION APPARATUS FOR AVIATION-ENGINES. AUGUSTE MAIRE, Argenteuil, France, assignor to Societe Lorraine Des Anciens Etablissements De Dietrich & Cie. De Luneville, Paris, France. Filed Aug. 9, 1917. Serial No. 185,242. 2 Claims. (Cl. 123—149.)

1. In ignition apparatus for aviation engines having a plurality of cylinders and a plurality of spark plugs in each cylinder, the combination with a plurality of magnetos driven from the crank shaft of the engine, of a plurality of distributers each adapted to be operated by a different cam shaft of the engine, an electrical connection from each magneto to its corresponding distributer, and an electrical connection from each distributer to one of the spark plugs in each cylinder, whereby a plurality of independent current supply means is provided for the several spark plugs of each cylinder.

1,375,257. AUTO-HOOD ANTIRATTLING DEVICE. TRUMAN J. MARTIN, Allentown, Pa. Filed Feb. 17, 1920. Serial No. 359,309. 1 Claim. (Cl. 292—128.)

A hood holding device for automobile hoods, said device comprising a housing secured to the rail of an automobile frame, an upstanding pivoted arm pivoted in said housing, the upper end of said arm being provided with a recess having its upper wall inclined upwardly and outwardly from substantially a central point and adapted to receive and engage over a similarly shaped lug carried by the hood, an outwardly and upwardly extending integral arm carried by the pivoted arm, a coiled spring interposed between the outwardly and upwardly extending arm and



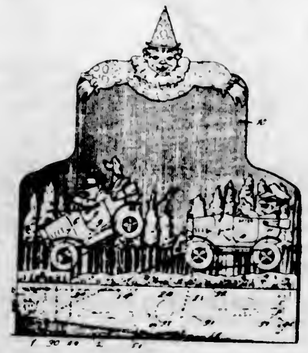
the housing at substantially a right angle to the upwardly and outwardly extending arm for normally holding the upstanding pivoted arm inwardly and an abutment lug carried by the housing against which the inner side of the hood engages and is held when said hood is in closed position.

1,375,258. PEANUT-HARVESTER. SELLERS C. MAY, Troy, Ala. Filed Jan. 10, 1919. Serial No. 270,493. 2 Claims. (Cl. 55—9.)

1. The combination with a movable frame of the plow carried by said frame, said plow comprising a horizontally disposed earth and root severing portion, arms extending upwardly from said horizontal portion and engaging the sides of the frame, means carried by the sides of the frame for guiding the plow during a vertical movement, means for moving said plow vertically upwardly or downwardly, and spring means connected to the upwardly extending arms and to the frame whereby a downward movement will be imparted to the plow when the lever is released.

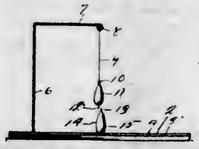
1,375,259. WHEEL-DRIVE. HENRY NELSON, Beloit, Wis. Filed May 23, 1919. Serial No. 299,191. 3 Claims. (Cl. 64—98.)

1. A wheel structure having in combination, a shaft, a wheel mounted loosely thereon, a driving hub secured



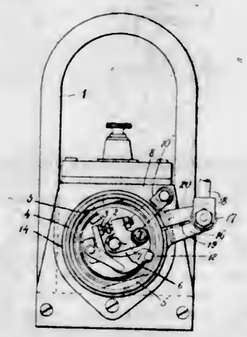
from the shaft, bars extending from said hub, and bars extending at an angle to the spokes, and pivotally connected at their inner ends to the aforesaid bars and at their outer ends to the wheel near the rim thereof.

1,375,260. ADVERTISING DEVICE. ANDREW RASMUSSEN, Sr., and ANDREW RASMUSSEN, Jr., Ridgway, Colo. Filed Sept. 30, 1920. Serial No. 413,781. 4 Claims. (Cl. 40—69.)



1. An advertising device comprising a longitudinally disposed endless scene, a back ground rising upwardly, a rotatable sign disposed behind said back ground and adapted to be rotated for positioning various signs in registration with openings in the back ground, a horizontally disposed shaft disposed below the rotatable sign, means for intermittently rotating said shaft, a figure disposed above the rotatable sign and provided with pivoted arms, and means whereby as the shaft is intermittently moved the rotatable sign will be intermittently moved and the pivoted arms of the figure moved in the direction of the sign openings in the back ground.

1,375,261. ADVERTISING DEVICE. ANDREW RASMUSSEN, Sr., and ANDREW RASMUSSEN, Jr., Ridgway, Colo. Filed Oct. 14, 1920. Serial No. 417,042. 5 Claims. (Cl. 40—32.)

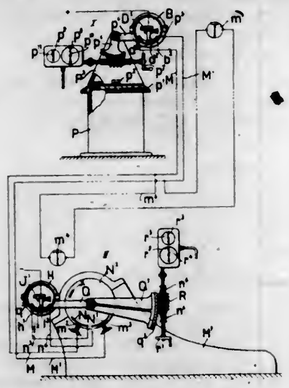


1. A device of the character described comprising an endless vertically disposed scenic belt, and a pivoted lever, a single source of power for operating the scenic belt and oscillating the pivoted lever, said lever being operable by means of an eccentrically disposed pin carried by a rotatable member, means for varying the position of the pivotal point of the lever for varying the oscillation of the lever, a pivoted figure having operable parts thereon, and a fixed figure having operable parts thereon and means operable from the single source of power for operating the operable parts on the figures, said pivoted figure being oscillated on its pivotal point by the oscillation of the pivotal lever simultaneously with the operation of the operable parts thereon.

1,375,262. GAME. THEODORE H. SCHROR and GEORGE L. SCHROR, Avon, N. Y. Filed Oct. 20, 1920. Serial No. 418,196. 2 Claims. (Cl. 46—59.)

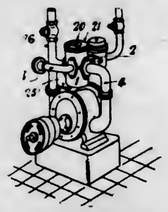
1. A game comprising a base having a flat surface and an inclined surface, a swinging weight carried by a support and disposed above the base, said swinging weight being provided with a downwardly extending pin, a weight disposed on the base adjacent the inclined surface thereof and provided with an upwardly extending pin, said upwardly extending pin being adapted to be engaged by the downwardly extending pin of the swinging weight, which swinging weight tilts the base carried weight and allows the same to roll down the inclined surface.

1,375,263. IGNITION-TIMING MECHANISM. WOLFGANG E. SCHWARZMANN, Springfield, Mass., assignor, by mesne assignments, to American Bosch Magneto Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 26, 1917. Serial No. 193,242. 5 Claims. (Cl. 200—19.)



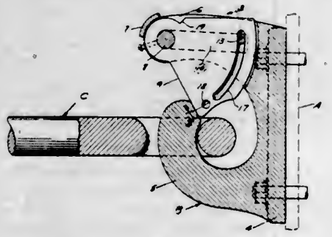
1. In variable timing mechanism for mechanical interrupters for ignition apparatus, an adjustable member carrying one of the elements of the mechanical interrupter and having wedge teeth on its periphery, a timing member comprising an arm and a ring connected to the arm and having wedge teeth adapted to mesh with the wedge teeth on the adjustable member, and means for contracting and expanding the ring around the adjustable member, whereby the ring and the adjustable member may be meshed around their peripheries with the arm extending in any desired angular relation to the adjustable member for connection to an adjusting wire or rod.

1,375,264. FIRE-CONTROL APPARATUS PARTICULARLY INTENDED FOR NAVAL GUNS. HERMANN SUNDHAUSSEN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,090. 7 Claims. (Cl. 89—41.)



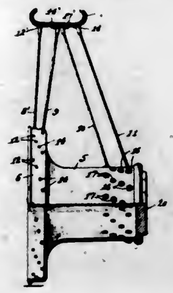
1. An apparatus of the class described comprising a stabilizing apparatus, a device stabilizable by said apparatus, a second stabilizing apparatus, a second device sta-

billizable by said apparatus, means for adjusting the stabilizable devices, electric means connecting said stabilizing



apparatus and stabilizable devices in such a manner that the one stabilizable device is adjustable parallel to the other stabilizable device.

1,375,265. AUTOMATIC GAS AND LIKE REGULATOR. ERNEST TURNER, Urmston, near Manchester, England. Filed Sept. 21, 1917. Serial No. 192,512. 5 Claims. (Cl. 48—184.)



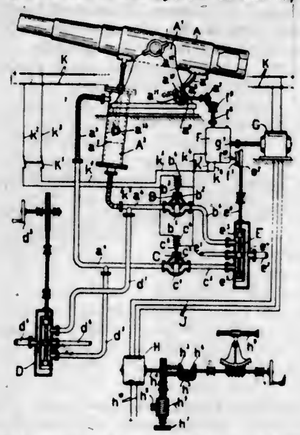
1. An apparatus for regulating the volume and pressure of fluid mixtures so as to maintain a predetermined proportional mixture and pressure of the gases or vapors irrespective of the rate of flow comprising a valve casing having separate ports communicating with conduits for the fluids to be mixed, with the suction side of a compressor and with the delivery main, a piston valve in said casing and hand operated means to rotate the piston angularly, the arrangement being such that the valve constitutes a combined admission regulator and circulation regulator, subatantially as described.

1,375,266. COUPLING. TOBIAS WEBER, Los Angeles, Calif. Filed Mar. 8, 1920. Serial No. 363,968. 2 Claims. (Cl. 213—45.)

1. A coupling member comprising a hook, a gravity operated guard for closing the mouth of said hook, said guard having a shaft secured thereto pivotally mounted on said hook and forming a handle for manipulating the guard, said guard being mounted to swing away from the point of said hook and to close the mouth thereof by engaging the inner side of the point, and a detent on said hook disposed to engage a recess in said guard for holding the latter in open position.

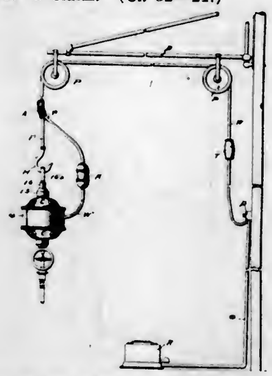
1,375,267. WIRE-SPOKE WHEEL. LOUIS SANFORD WEIL, Glenrose, Ohio. Filed June 9, 1920. Serial No. 387,554. 4 Claims. (Cl. 301—56.)

1. In a wheel of the character described, a plurality of rows of spokes arranged to form a flange-group which extends forwardly only to the center of the rim and inner and outer barrel-sets uncrossed relative to each other and extending from near the outer end of the hub to the center and outer edge of the rim respectively.



1,375,268. HOT-PLATE LIFTER. ARTHUR L. WITTENMYER, Kirkland, Wash. Filed June 30, 1919. Serial No. 307,606. 9 Claims. (Cl. 294—28.)

1. A hot-plate lifter comprising horizontally extending pivoted handles having plate engaging jaws with spaced top and bottom portions and a lifting handle extending transversely of the jaws and comprising pivotally connected levers which are each loosely connected at one end with one of the jaws connected to said jaws.

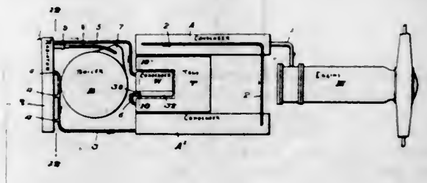


1,375,269. APPARATUS FOR THE ELECTRICAL LONG-DISTANCE CONTROL OF THE VALVE-GEAR OF A HYDRAULIC GUN-POINTING GEAR. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,070. 7 Claims. (Cl. 89—41.)

1. A controlling device for guns comprising an elevating mechanism of the hydraulic type, means for supplying a hydraulic medium to a hydraulic device, a system of valves for controlling the hydraulic medium, a range device and sighting telescope, a control device for the system of valves embodying a contact device, electrical means controlled by said contact device for operating a part of said system of valves and additional means for controlling the rest of the system of valves, said control

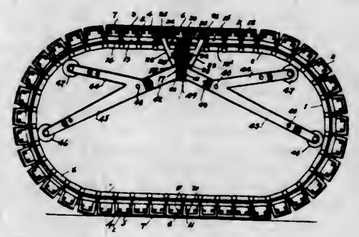
device being operatively connected to the sighting telescope.

1,375,270. PORTABLE MOTOR. JAMES AUSTIN ANDERSON, Chickasha, Okla. Filed May 26, 1920. Serial No. 384,419. 1 Claim. (Cl. 32—21.)



In combination, a motor including a casing, a suspension bracket carried by the casing, a support including pulleys, a conducting wire trained over said pulleys, and connected to said motor, said conducting wires being formed of sections with one of said sections carried by said motor, a flexible member secured to said conducting wires and a hook carried by said flexible member and engaging the suspension bracket for supporting the motor in vertical position.

1,375,271. UTENSIL-HANDLE GUARD. MYRTLE A. ANDES, Huntington, W. Va. Filed July 16, 1920. Serial No. 396,774. 1 Claim. (Cl. 53—3.)

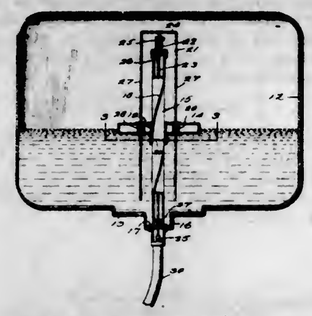


A guard for utensil handles comprising an upper plate having an end portion bent at right angles thereto, said plate being provided with side flanges bent under the same, the angularly bent end of the plate being provided with fingers separated partially therefrom on transverse lines and coöperatively bent to form a securing loop, a lower plate held in parallel relation to the upper plate by said flanges, and a layer of heat non-conducting material clamped between said plates.

1,375,272. STEAM-CONDENSING APPARATUS. HARTLEY O. BAKER, Pueblo, Colo., assignor to The Baker Steam Motor Car and Manufacturing Co., Inc., Pueblo, Colo. Filed Oct. 19, 1918. Serial No. 258,799. 6 Claims. (Cl. 257—25.)

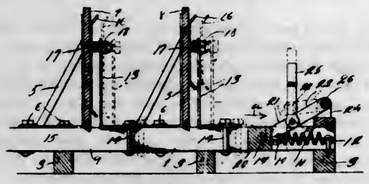
6. In a steam condensing system, a water tank, a boiler having a draft flue, steam condensing means, a discharge pipe for the condensing means leading to the water tank, a pressure pipe for the discharge of steam from the condensing means connected to said flue for the discharge of steam into the flue to increase the draft, and a normally closed pressure valve for the pressure pipe adapted to open and permit the flow of steam into the flue when the pressure rises above the predetermined amount.

1,375,273. TRACTION-DRIVE. HARVEY NELSON BINGHAM, Weyburn, Saskatchewan, Canada. Filed June 26, 1919. Serial No. 306,987. 10 Claims. (Cl. 180—9.1.)



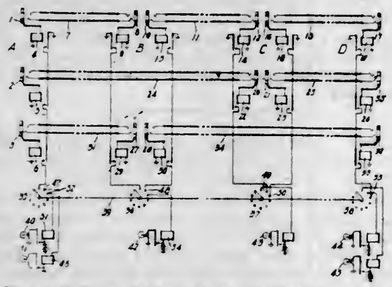
1. In combination, a continuous traction tread formed from similar tread sections pivotally connected together and presenting vertical and horizontal tracks, compression springs associated with adjacent tread sections, a load suspended from the upper side of the tread and riding one of the tracks and a drive for the tread engaging the other of the tracks.

1,375,274. LIQUID-GAGE. EDWARD V. BOILER, Westside, Iowa. Filed Jan. 15, 1920. Serial No. 351,571. 3 Claims. (Cl. 73—82.)



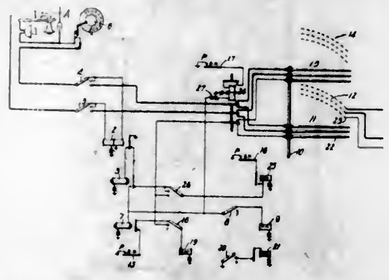
1. In apparatus of the character described, a liquid holding tank, a substantially vertical stationary tube arranged within the tank and having a spiral guide means, a vertically movable float arranged within the tank exteriorly of the stationary tube and having a central opening to receive the tube and transverse openings arranged outwardly of the central opening, an element secured to the float and engaging the spiral guide means, an inverted approximately U-shaped member having its arms operat-

ing within the outer openings of the float, a drive shaft rotatable within the tube and connected with the inverted



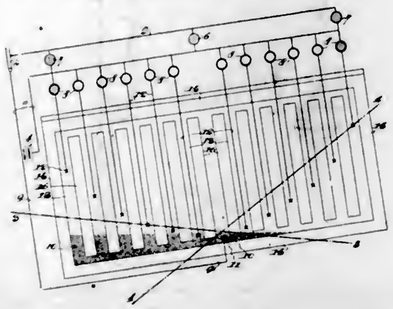
approximately U-shaped member, and an indicator connected with the drive shaft to be moved thereby.

1,375,275. BOX-FORMING MACHINE. CHARLES L. BROWN, Robinson, Kans. Filed Sept. 8, 1920. Serial No. 408,920. 2 Claims. (Cl. 144—295.)



1. A box forming machine comprising a base, brackets carried by said base, a slidable bar slidably mounted in the base, brackets carried by said slidable bar and adapted to coöperate with the brackets carried by the base, said slidable bar being horizontally disposed, a coiled spring connected to one end of the slidable bar and to the base for normally holding the slidable bar and its brackets out of operative position, link connections comprising a pair of links pivoted together and having their other ends pivoted to the base and to the end of the slidable bar, said link connections when in alinement forcing the brackets carried by the slidable bar and the base into clamping position, and a handle pivoted to the links at their point of pivotal connection to each other, said handle extending upwardly where it can be readily grasped by the operator.

1,375,276. TELEPHONE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1918. Serial No. 268,662. 12 Claims. (Cl. 179—43.)



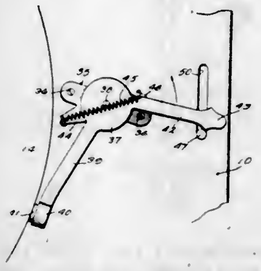
9. In a telephone system, a sectionalized trunk circuit, means associated with certain sections of said circuit for indicating the status of other sections, and means operating in synchronism for controlling the first named means.

1,375,277. TELEPHONE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 5, 1919. Serial No. 302,029. 5 Claims. (Cl. 179—18.)

1. In a telephone system, telephone lines, a sender associated with each of said lines, said sender being arranged to transmit long and short impulses, means for interconnecting said lines including automatic switches, said switches including a plurality of brush sets, and a slow-acting relay for selecting a particular one of said brush sets, said slow-acting relay being responsive to the long impulses transmitted by said senders.

1,375,278. INCLINE-INDICATOR. WILLIAM S. CLAYTON, Vancouver, British Columbia, Canada. Filed Sept. 5, 1918. Serial No. 252,803. 4 Claims. (Cl. 177—351.)

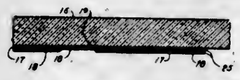
1. An incline indicator, comprising in combination, an energized closed circuit in which is an incandescent lamp, a series of lamps arranged on each side of the aforesaid lamp, one terminal of each of which is connected to a wire of the closed circuit and the other terminal of each separately connected to a contact projecting into an elongated cell in which a body of quicksilver is movable; which quicksilver is connected in the closed circuit but is not in contact with the lamp terminal contacts when the indicator is horizontal but which when the indicator is inclined to one side or the other will connect each lamp successively in the closed circuit from the middle lamp outward.



2. An incline indicator, comprising an elongated cell in which a body of quicksilver is movable, the upper part of which cell is divided into a series of substantially upright ducts into each of which a contact terminal projects, the quicksilver being electrically connected to an energized circuit and the contact terminals separately connected to one side of the same circuit with an incandescent lamp in each of such contact connections, the depth to which the lamp contact terminals project into each cell being such that as the cell is inclined to one side of the other the contact nearest the midlength of the cell will be

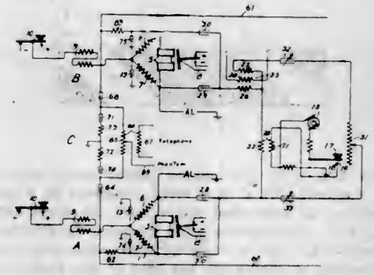
the first closed with the quicksilver and the others successively from that to the outer end.

3. An incline indicator comprising an elongated cell having a series of upwardly projecting subdivisions, the lower ends of which subdivisions are connected together, a terminal contact projecting downward into each vertical subdivision of the cell, a body of quicksilver in the lower part of the cell and movable in it to rise in each vertical subdivision on either side of the midlength as the cell is inclined to one side or the other, said quicksilver being electrically connected in an energized circuit to one side of which circuit each terminal contact of each subdivision is separately connected, and a lamp in the separate connection of each terminal contact.



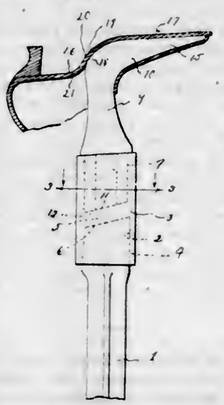
4. An incline indicator, comprising an elongated cell having a series of upwardly projecting subdivisions, the lower ends of which subdivisions are connected together, a terminal contact projecting downward into each vertical subdivision of the cell, a body of quicksilver in the lower part of the cell and movable in it to rise in each vertical subdivision on either side of the midlength as the cell is inclined to one side or the other, said quicksilver being electrically connected in an energized circuit to one side of which circuit each terminal contact of each subdivision is separately connected, the depth to which the terminal contact when the quicksilver before those that are nearer that those nearer to the middle on each side will make contact with the quicksilver before those that are nearer the ends.

1,375,279. TIME-CONTROLLED MECHANISM FOR GRAPHOPHONES. JAMES COIA, Ravenna, Ohio. Filed May 6, 1920. Serial No. 379,238. 6 Claims. (Cl. 188—110.)



1. In apparatus of the character described, the combination with the casing and rotatable table of a sound reproducing machine, of a brake element to engage the rotatable table and hold it against movement including a movable element, a longitudinally movable rod arranged within the casing, yielding means to move the rod in one direction, means for controlling the movement of the rod by the yielding means, and a vertically adjustable element connected with the rod to engage with the movable element.

1,375,280. STREET-TRAFFIC SIGNAL. JAMES A. COOK, East Bridgewater, Mass. Filed Sept. 21, 1920. Serial No. 411,698. 2 Claims. (Cl. 40—135.)



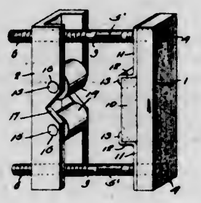
1. A signal, adapted for both day and night use, said signal comprising a box having an opening, a transparent pane secured in and filling the area of said opening, the box and pane constituting a casing, a portion of the external surface of which is formed by the outer side of the pane, an illuminator inclosed by said casing, two surface coatings of material adherent to the pane, painted on the inner side of the pane, and contrasting strongly in color with each other, one coating being opaque, light-absorbing, and interrupted by sign-forming openings exposing inner side portions of the pane, and the other coating being translucent and light-reflecting, and covering the said exposed inner side portions, so that the sign characters are rendered legible, by daylight reflected from said translucent coating through the pane, and from the outer side of the latter, and by artificial light from said illuminator.

1,375,281. TELEGRAPH SYSTEM. GEORGE C. CUMMINGS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 28, 1918. Serial No. 237,009. 13 Claims. (Cl. 179—4.)

1. In a system of simultaneous telephony and telegraphy, a circuit formed of a pair of line conductors, means for telephoning over said circuit, duplex equipments for employing direct currents in signaling in earth-return relation over said line conductors respectively, and further equipment for each line conductor comprising a first transformer having several windings, a plurality of derived circuits opaque to direct currents extending from said respective duplex equipment to respective windings on said transformer, a second transformer connected to extend the derived circuits through said first transformer, and means included with said second transformer for employing alternating currents in telegraphing over said line conductors respectively independently of said telephoning and said direct current telegraphing.

1,375,282. HIGH-ARCH-REPAIR LAST. GEORGE DOERING, St. Louis, Mo. Filed July 8, 1920. Serial No. 394,640. 1 Claim. (Cl. 12—123.)

The combination with a repair jack having a rectangular shaped head and a reduced portion of a shoe last, of



an extension member therefor, said extension member comprising an elongated member provided with sockets at its ends, the bottoms of which are disposed at an incline to the side walls of the sockets for the reception of the rectangular head of the repair jack and the reduced portion of the shoe last, said rectangular head of the repair jack and the reduced portion of the shoe last having inclined end surfaces for engaging the bottoms of the recesses in the extension member.

1,375,283. WELT-STRIP AND METHOD OF MAKING SAME. ERNEST W. DUNBAR, Hudson, Mass., assignor to Apsley Rubber Company, Hudson, Mass., a Corporation of Massachusetts. Filed Oct. 20, 1919. Serial No. 332,038. 2 Claims. (Cl. 154—2.)

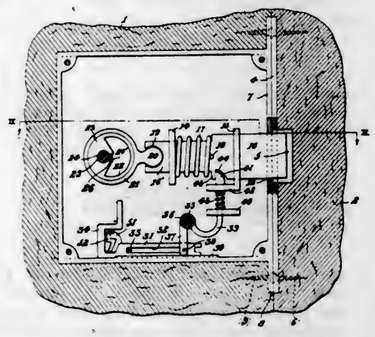
1. A welt strip for making rubber welts with fibrous core, consisting of a long strip composed of a plurality of sections of rubberized fabric with the fibers extending on the bias, said sections being spaced in lengthwise series and united together at their adjacent ends, and a continuous coating of rubber on one face of the strip of united sections in such manner as to form a smooth exterior surface on the rubber side.

1,375,284. CRANK-SHAFT-LAPPING TOOL. EDISON REED ELLIOTT, Champaign, Ill. Filed Aug. 19, 1920. Serial No. 404,532. 6 Claims. (Cl. 51—255.)

1. A crank shaft lapping tool comprising opposed relatively fixed and sliding frame elements, an abrasive element carried by the relatively fixed frame element, bolts having threaded ends secured in the relatively fixed frame element and opposite threaded ends passing loosely through the relatively sliding frame element, said bolts also having intermediate angular portions, fastening means for the abrasive element engaging said abrasive element and secured in position upon the first-named threaded ends of the bolts, a pair of transversely disposed rollers carried by the relatively sliding frame element and arranged on opposite sides of a line passing through the transverse center of the abrasive element, and nuts engaging the second-named threaded ends of the bolts for maintaining said frame elements in relatively adjusted position.

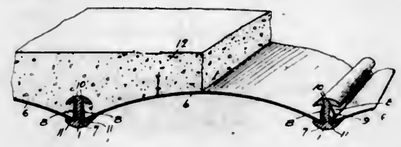
1,375,285. PULP-BLEACHING APPARATUS. HARRY ELLWOOD ELLIS, Leesburg, Fla. Filed Mar. 12, 1920. Serial No. 365,249. 8 Claims. (Cl. 8—2.)

1. A pulp bleaching apparatus comprising a chamber, conveyers located in said chamber, said conveyers moving in opposite directions, means for filling said chamber with a bleaching gas and means for feeding pulp onto said conveyers and removing said pulp from the bleaching chamber in such a manner that the pulp forms a seal for preventing escape of the bleaching gas.



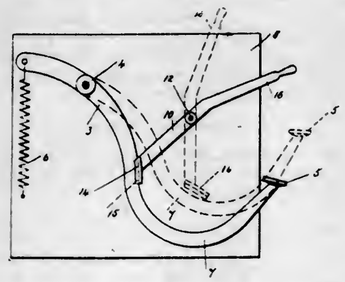
1,375,286. SUPPORT FOR TRAPS. WALTER A. GIBBS, Wilmington, Del. Filed Sept. 24, 1919. Serial No. 326,055. 3 Claims. (Cl. 43—96.)

1. The combination of a post, a trap and means for locking the trap to the post, said means being releasable by an initial vertical movement of the trap from the post.



1,375,287. LOCK. SIMO GJUKIĆ, Columbus, Ohio. Filed Oct. 30, 1920. Serial No. 420,705. 4 Claims. (Cl. 70—29.)

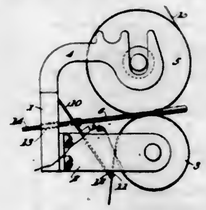
1. A door lock of the type described comprising a casing, a sliding latch bolt mounted therein, a latch device



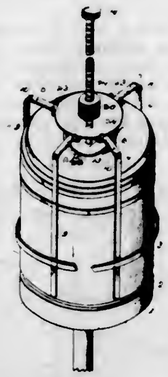
pivotally mounted within the casing and comprising a downwardly extending arm and an upwardly curved arm, a latch head carried by the upper end of the curved arm, a coil spring surrounding the curved arm and engaging the head of the latch device for normally forcing the same into positive engagement with the sliding latch bolt to hold the same in locked position, a sliding member guided in its movements by the lower wall of the casing and connected to the downwardly extended arm of the latch device, an angle arm extending upwardly from one end of the sliding member and adapted to be engaged by a key projection within the casing for shifting the sliding member to free the latch device from engagement with the sliding latch bolt and a knob spindle removed with the sliding latch bolt to retract the same to inoperative position.

1,375,288. COMBINED METALLIC AND CONCRETE FLOOR AND CEILING CONSTRUCTION. WILLIAM GOLDIE, Wilkinsburg, Pa. Filed Jan. 7, 1920. Serial No. 350,030. 6 Claims. (Cl. 72—70.)

1. In floor construction, the combination of recessed metal bars, spacer-sheets extending between the bars and fitting in said recesses, and expansible locking members fitting in the recesses of the said bars and holding said spacer-sheets in the said recesses.



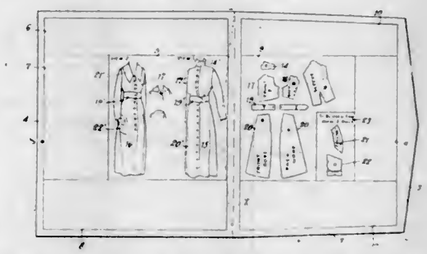
1,375,289. LEVER-LOCKING DEVICE. JOSEPH A. GRAHAM, Alleman, Iowa. Filed Apr. 21, 1920. Serial No. 375,441. 2 Claims. (Cl. 74—39.)



1. The combination, with a pivoted lever provided with a curved end portion, and automatic means for raising the said curved end portion, of a locking lever pivoted over the curved end portion of the first said lever in front of and below its pivot, said locking lever having a shoe at its lower end which is slidable on the said curved end portion and which is adapted to be pressed into frictional locking contact with it.

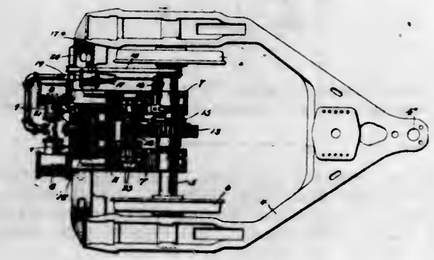
1,375,290. STOP-MOTION FOR TWISTER-FRAMES. EVERETT E. HEAFNER, Lincolnton, N. C. Filed July 24, 1920. Serial No. 398,608. 4 Claims. (Cl. 19—25.)

2. A stop motion for spinning machinery, comprising a frame adapted to be placed between upper and lower rolls about which the thread or yarn is passed, and a drop wire in contact with the thread or yarn to render the frame ineffective to stop the upper roll while the thread or yarn is running and having notches at its lower end to engage the broken end of a thread or yarn and thereupon to release the frame to permit the rolls to draw the frame in between them and thereby raise and stop the upper roll.



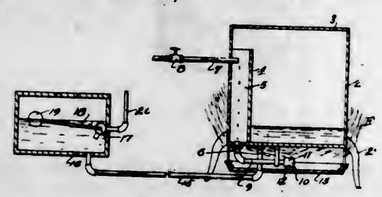
1,375,291. DEVICE FOR USE IN THE APPLICATION OF PISTON-RINGS TO PISTONS. JOE H. HUBBLE, Tekoa, Wash., assignor to Grant McCann and Robert L. Ragon, Tekoa, Wash. Filed Feb. 27, 1920. Serial No. 361,684. 11 Claims. (Cl. 29—86.4.)

1. A device for use in the application of piston rings to pistons comprising an assemblage of guiding members having parallel fingers to extend beside the circumferential surface of a piston to which the device is to be applied.



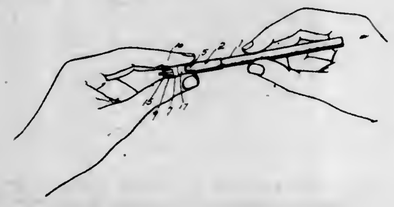
1,375,292. PATTERN-ENVELOP. FRANZ HUTTER, New York, N. Y., assignor to The McCall Company, a Corporation of New York. Filed Jan. 24, 1918. Serial No. 213,466. 1 Claim. (Cl. 283—1.)

A pattern envelop having thereon at least one illustration of a complete garment and a group of separate illustrations of the several component parts, the envelop including a flap, said illustration of the complete garment and said group of illustrations being delineated on different parts of the envelop and so arranged that when the flap is opened out all the illustrations will appear in sub-



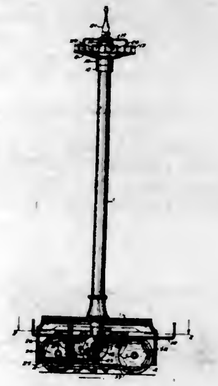
stantially one plane and the separate illustrations in said group will appear substantially in line with the locations in which they appear in the illustration of the completed garment.

1,375,293. BOOSTER-MOTOR FOR LOCOMOTIVES. HOWARD L. INGERSOLL, White Plains, N. Y. Filed Oct. 2, 1917, Serial No. 194,335. Renewed Feb. 16, 1920. Serial No. 359,201. 27 Claims. (Cl. 105—115.)



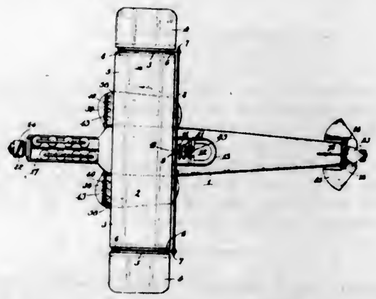
3. In combination with a locomotive having main driving wheels and steam operated means for driving the same, a trailer truck supporting a part of the weight of the locomotive, and a booster motor for aiding the main driving means or starting the locomotive and propelling the same at low speeds which is adapted to drive the wheels of the trailer truck.

1,375,294. OIL-BURNER. JAY JENKINS, Beaumont, Calif. Filed Feb. 5, 1920. Serial No. 356,470. 2 Claims. (Cl. 158—91.)



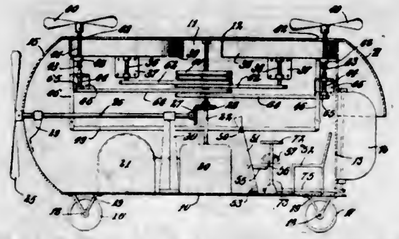
1. In an oil burning apparatus, a closed steam chamber having an oil compartment, means for supplying oil to the compartment, means for automatically supplying water to the chamber proper, and a retort connected to the oil compartment to receive oil and steam therefrom, the retort disposed under the steam chamber to generate steam from the water therein.

1,375,295. PENCIL-SHARPENER. SOREN JENSEN, Los Angeles, Calif. Filed Aug. 5, 1920. Serial No. 401,499. 4 Claims. (Cl. 120—93.)



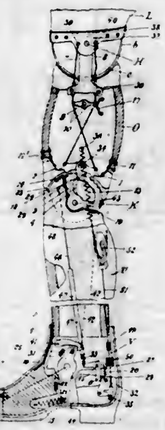
1. In a pencil sharpener, a tubular member having a tapered slotted forward end, a spring tongue projecting into the slot in said forward end, a plate positioned on the forward portion of said tubular member and retained in place by said spring tongue, an inclined finger projecting downwardly from said plate and positioned at one side of the slot in the tubular member and said finger being beveled on one side to form a cutting edge.

1,375,296. TRAVELING LAWN-SPRINKLER. ERIK JOHNSON, Chicago, Ill. Filed Apr. 12, 1919. Serial No. 289,618. 2 Claims. (Cl. 299—49.)



1. In a traveling lawn sprinkler, a wheeled casing, axles for said wheels journaled in said casing, a water pipe carried by said casing, a water wheel, having spaced inwardly converging blades, arranged upon said standpipe, a head carried by said standpipe and formed with two pairs of nozzles whereby water is directed from either pair upon said water wheel in either of two directions, the members of each pair of nozzles being disposed diametrically opposite each other, a rotary rod extending through said standpipe and water pipe, a tie bar connecting the blades of said water wheel and said rod, gearing connecting said rod and the wheel axles, a slide valve arranged in said standpipe for controlling the flow of water through one or the other of said pairs of nozzles, a shift rod carried by said casing for engagement and operation by an exterior object, and connection between said shift rod and slide valve.

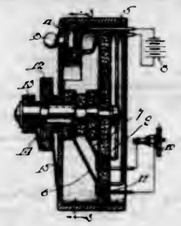
1,375,297. AEROPLANE. FRANK J. JUREK, Buffalo, N. Y. Filed May 28, 1918. Serial No. 236,974. 7 Claims. (Cl. 244—20.)



1. An aeroplane having oscillatory wings comprising two plate-like members in contact with each other and each having openings therein, and means for moving said members relatively for bringing said openings into or out of registration.

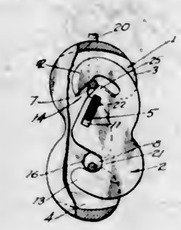
1,375,298. FLYING-MACHINE. MAX T. KION, Washington, D. C. Filed Mar. 23, 1920. Serial No. 368,009. 1 Claim. (Cl. 244—15.)

A flying machine comprising a body, a pair of segmental pockets formed in each side wall thereof one in front of the other, rotary helices rotating partially in said pockets, the said pockets having the adjacent sides of their arciform side walls extended beyond the sides of the said body.



1,375,299. ARTIFICIAL LEG. JENS PETER KNUDSEN, Kædeby, Denmark. Filed May 11, 1920. Serial No. 380,491. 9 Claims. (Cl. 3—2.)

1. Artificial leg consisting of a rigid hip-bandage, an upper leg, means for hingedly securing said upper leg to said hip bandage, a lower leg, means for hingedly securing the lower leg to the upper leg, a foot and means for hingedly securing the foot to the lower leg, the hinge between the upper and the lower leg (the knee-hinge), being, at an upright position of the leg, somewhat in front of the vertical line through the hip-hinge and the foot-hinge, respectively.

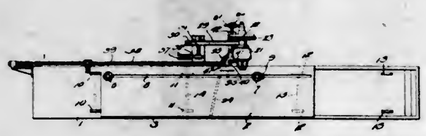


1,375,300. SLIDING SWITCH. LOUIS KOVACS, Chicago, Ill. Original application filed Jan. 21, 1918, Serial No. 212,930. Divided and this application filed June 21, 1919. Serial No. 305,845. 3 Claims. (Cl. 200—43.)

1. In an electric switch, a channel-sectioned member of insulating material, a pair of wire terminals mounted thereon and extending substantially flush with the bore of the channel at opposite sides thereof, a concealing plate continuously closing the mouth of the channel and longer than the latter and having a perforation, a cover over the concealing plate having a slot in alinement with the said perforation and the axis of the channel and having indicating markings thereon, a handle member extending through said slot and perforation into the channel, and a metal switching element carried by the handle member

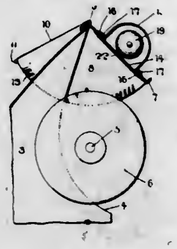
and bridging the said wire terminals when the handle member is opposite a predetermined one of the indicating markings on the cover.

1,375,301. SAFETY COUPLING-HOOK. DAVID C. KUFFEL, Randsburg, Calif., assignor of one-half to H. D. Williams, Randsburg, Calif. Filed Feb. 3, 1921. Serial No. 442,113. 3 Claims. (Cl. 24—242.)



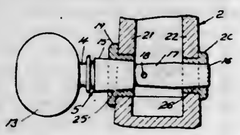
3. A safety coupling hook comprising a primary hook member and a secondary hook member slidably received in the same, each of said hook members having hooks at their respective ends, said hook members being assembled with the hooks at their ends extending in opposite directions and overlying one another to define openings extending through the coupling, rings in said openings, said hook members being swingable with relation to one another to close said openings by the respective overlying hooks, a tapering point upon the secondary hook member at the opening defined by the overlying hooks at one end of the device, the primary hook member having a slot therein and a bearing pin upon the secondary hook member received in said slot, a spring in said slot between the end of the same and said pin adapted to yieldably slide said hook members relative to one another to cause the tapering point to be impinged by the ring in the above mentioned opening for preventing relative rotation of said hook members from a position closing said openings, said point being disengaged from said ring when the members are reversely slid relative to one another against said spring so that the members may be reversely swung relative to one another so as to disengage the overlying hooks at the opposite end of the device for permitting of removal of the ring positioned in the opening defined by said hooks.

1,375,302. AUTOMATIC SPACING AND PUNCHING MACHINE. COLUMBUS K. LASSITER, Richmond, Va., assignor to Norman E. Woods, Paterson, N. J. Filed Apr. 7, 1920. Serial No. 371,977. 41 Claims. (Cl. 164—116.)



1. In a spacing and punching machine, a traveling work supporting table, a punch, a feed mechanism for advancing the table and returning it to starting position, a second feed mechanism intermittently operable for positively governing the advancing motion of the table to spaced punching positions and maintaining it in such positions

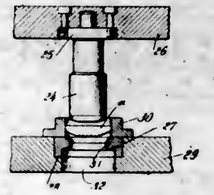
during punching periods against the driving action of the first named feed mechanism, and means for connecting said feed mechanisms with the driving element for a forward driving action of both of said feed mechanisms,



said means being operative to disconnect the first-named feed mechanism from the driving element and to connect the second-named feed mechanism to the driving element for a reverse drive action to return the table to starting position.

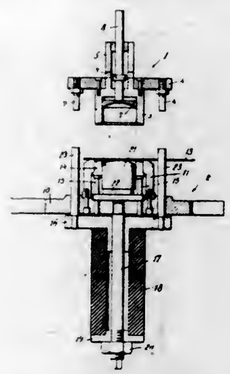
1,375,303. HOOD OF POLISHING AND BUFFING MACHINES. GUSTAVE A. LEIMAN, New York, N. Y. Filed Mar. 6, 1918. Serial No. 220,798. 4 Claims. (Cl. 51—268.)

4. The combination with a hood for polishing and buffing machines having a shield pivoted thereon and provided with yielding side walls arranged to frictionally engage said hood, said shield having an opening therethrough, of a lamp and holder slidably connected to the shield in position to cover said opening and direct light into the hood and a screen covering the opening for protecting the lamp.



1,375,304. TUNING-PEG AND MOUNTING FOR MUSICAL INSTRUMENTS. GEORGE C. LINDSEY, Los Angeles, Calif. Filed May 16, 1919. Serial No. 297,632. 1 Claim. (Cl. 84—305.)

A peg for stringed instruments having two bearing portions tapering toward the outer end thereof, and a central winding portion between the two bearings tapering inwardly the entire length of said winding portion from the outer bearing to the inner bearing.

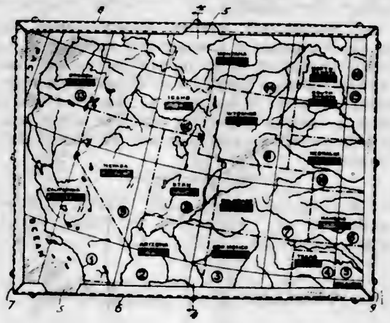


1,375,305. PROCESS AND APPARATUS FOR MAKING BATTERY-ELECTRODES. LORENZ MAISEL, Madison, Wis., assignor to Burgess Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed Oct. 11, 1918. Serial No. 257,691. 15 Claims. (Cl. 113—51.)

1. The herein-described method of making elongated seamless zinc battery cups of usual dimensions, which consists in subjecting a blank of sheet zinc to a preliminary shaping action while maintaining it under a uniform marginal pressure to convert it into a wide shallow cup, and thereafter subjecting said cup to a series of drawing

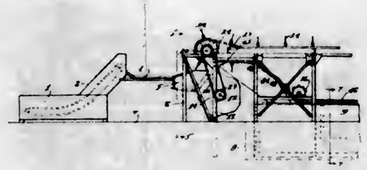
actions which are distinct from one another and during each of which the sides of the cup are slightly thinned, and the bottom thereof is left substantially unchanged as to thickness and diameter to gradually elongate the cup and simultaneously reduce its diameter.

1,375,306. BATTERY-ELECTRODE. LORENZ MAISEL, Madison, Wis., assignor to Burgess Battery Company, Madison, Wis., a Corporation of Wisconsin. Original application filed Oct. 11, 1918, Serial No. 257,691. Divided and this application filed Dec. 21, 1918. Serial No. 267,752. 3 Claims. (Cl. 204—38.)



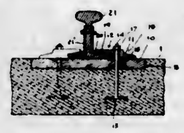
3. A dry battery electrode in the form of a seamless wrought zinc cup, the bottom of the cup being in substantially the same condition as when blanked and the sides of the cup being slightly thinner than when blanked, substantially as described.

1,375,307. TYPE FRACTIONS AND METHOD OF USE. CLARENCE C. MARDER, New York, N. Y., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 27, 1916. Serial No. 106,213. 4 Claims. (Cl. 101—398.)



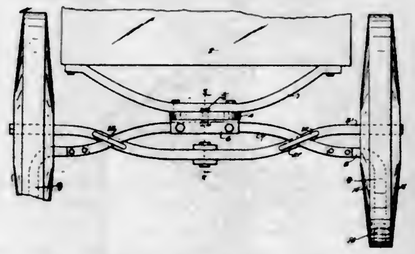
1. A font of type for setting up fractions in printing comprising en-set type each bearing a numerator and a denominator with a line separating the numerator and the denominator formed to the edge of the type whereby when two of the types are set together a continuous line is formed, substantially as set forth.

1,375,308. EDUCATIONAL APPLIANCE. JOHN A. MATHES, San Diego, Calif. Filed Apr. 21, 1919. Serial No. 291,666. 4 Claims. (Cl. 35—6.)



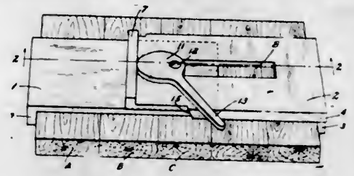
1. In an educational device, in combination: a single chart having appearing thereon the answers to possible questions; means for obscuring the answers only; means for manually indicating the answers while the answers are obscured.

1,375,309. ELECTROGALVANIZING-MACHINE. CONSTANTINE G. MILLER, Chicago, Ill., assignor to Meaker Galvanizing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 3, 1920. Serial No. 356,066. 27 Claims. (Cl. 204—5.)



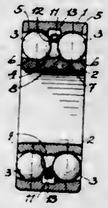
1. In a galvanizing machine the combination with a tank of electrolytic solution, stationary cathodes and anodes supported by said tank, an endless mechanism for carrying articles to be galvanized through the solution in said tank, means for automatically feeding articles to said mechanism, inclined bars disposed transversely in said tank adapted to intermittently elevate the articles to permit the hold on said articles to be changed, and means for automatically unloading the articles from said mechanism after the articles have been galvanized.

1,375,310. RAIL-CLAMP. WILLIAM F. MORRISON, Vallejo, Calif. Filed Jan. 3, 1921. Serial No. 434,439. 2 Claims. (Cl. 238—91.)



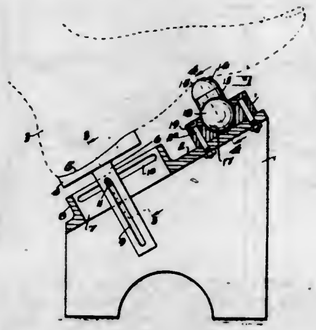
1. In combination with a rail tie, a rail and a fish plate a part of which extends over the base of the rail and is notched at its outer edge, of a rail supporting plate on the tie provided with a recess in its upper side, a rail clamping member engaging in the notch in said fish plate, a lug on the under side and between the ends of said member being engaged in said recess, a bolt extending through the plate, the lug and said member, and a nut threaded on the upper end of said bolt, said lug having engagement with the adjacent outer edge of the base of the rail.

1,375,311. RUNNING-GEAR FOR VEHICLES. RICHARD D. MORTON, Compton, Calif. Filed Dec. 23, 1919. Serial No. 346,961. 2 Claims. (Cl. 305—7.)



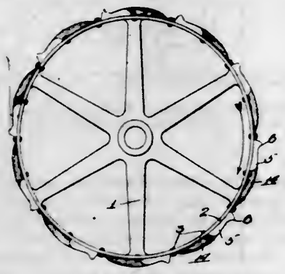
1. In a draft gear for wheeled vehicles, a circular wheel having an annular rim member and side plates attached thereto forming a substantially closed chamber with an axle opening at one side; an axle bearing concentrically mounted in the wheel; and an eccentric axle passing through the axle opening and having a downwardly turned arm with antifriction means rolling upon the lowermost portion of the said rim.

1,375,312. CLAMP. JOHN NICOL, Los Angeles, Calif. Filed Aug. 5, 1920. Serial No. 401,509. 1 Claim. (Cl. 144—299.)



A clamp including engaging members, one of said members having grooved edges arranged to engage the edges of the other member for sliding movement of said members relative to one another, actuating means carried by one of said members for drawing said members toward one another, the member having grooved edges having one of said grooved edges partially cut away to permit of assembly of the parts.

1,375,313. BALL OR ROLLER BEARING. JOHAN ABRAHAM OHLSSON, Stockholm, Sweden. Filed June 26, 1917. Serial No. 177,026. 4 Claims. (Cl. 64—57.)



4. In a bearing, the combination of a plurality of rows of supporting bodies of rotation, a solid outer ring, a solid inner ring, separated grooves provided for the said rows in one of the said rings, guide bodies of rotation located between the rows of supporting bodies and separating the bodies of each row from one another, a radially disposed opening in one of said solid rings for the insertion and removal of the supporting and guide bodies, a plug for closing said opening, and a guide member for the guide bodies, said member being interposed loosely between the solid outer and inner rings and between the rows of supporting bodies.

1,375,314. DEVICE FOR MANIPULATING THE BONES OF THE FEET. TYLER P. OVERTON, Los Angeles, Calif. Filed Apr. 20, 1920. Serial No. 375,354. 6 Claims. (Cl. 128—69.)

1. A device of the character described comprising a base, a heel support adjustably arranged on said base, and a yieldable member arranged on said base and provided with a convex upper surface that is adapted to engage the instep of a foot.

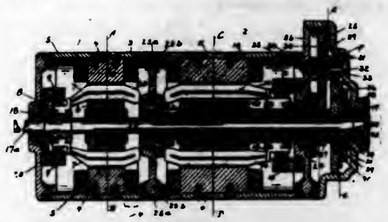
1,375,315. TRACTOR TREAD-SHOE. JAMES D. PARK, Duluth, Minn. Filed Dec. 16, 1918. Serial No. 266,953. 7 Claims. (Cl. 301—41.)

1. A tractor wheel tread shoe comprising a body portion, centrifugally and medially inclined side walls on the body portion, a centrifugally and forwardly inclined heel piece extending across one end of the body portion and connecting the side walls, and rounded cheeks integral with the side walls and heel piece and forming pockets with the body portion wherein the surface engaged by the wheel is entrapped and packed.

1,375,316. ADJUSTABLE DRESS-FORM. ANTHONY PECORARO, New York, N. Y. Filed Sept. 25, 1918. Serial No. 255,594. 7 Claims. (Cl. 223—18.)

1. An adjustable dress form comprising a plurality of body sections, a base-piece therefor, a resilient clamp for the neck sections having an extended boss providing a socket, and a standard extending through the base section and engaging the socket of the resilient clamp.

1,375,317. PROCESS FOR FORMING SECONDARY-BATTERY PLATES. JOHN M. PETERSON, Dawson, Minn. Filed Sept. 18, 1918. Serial No. 254,614. 4 Claims. (Cl. 204—29.)

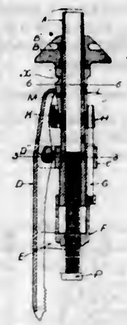


1. The process for forming Planté storage battery plates which consists in mechanically applying to a plate of metal capable of being formed into active material and having sufficient heaviness to maintain its shape and to supply a reserve of metal to be converted into active material, a coating embodying sufficient active material to initially provide for and maintain the desired electrical cell capacity.

1,375,318. BEAD-MAKING TOOL. FRANK W. PFEIFFER, Peekskill, N. Y. Filed May 25, 1920. Serial No. 384,194. 3 Claims. (Cl. 40—15.)

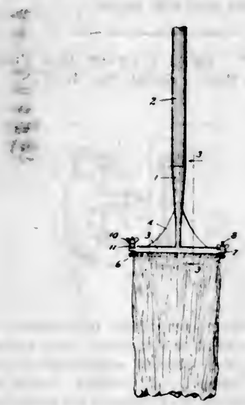
1. A tool for utilizing waste wire in bead making comprising a handle, a spindle in the handle, one end of the spindle forming a coupling for a flexible shaft connection, the other end of the spindle formed into a spring chuck.

1,375,319. ELECTRIC-MOTOR GENERATOR FOR STARTING AND LIGHTING GASOLENE-AUTOMOBILES. FRANK B. RAE, Cleveland, Ohio. Filed June 7, 1915. Serial No. 32,771. 2 Claims. (Cl. 171—252.)



1. An electric motor generator for starting and lighting gasolene automobiles consisting of a motor unit and a generator unit arranged end to end, having a common shaft on which the generator armature is mounted, and a hollow shaft surrounding the common shaft, the hollow shaft carrying and being driven by the motor armature, the common shaft being provided at one end with means for making a driving connection from it to the gasolene engine shaft and at the other end carrying an overrunning clutch, and reduction gearing between the hollow shaft and the overrunning clutch, said clutch being adapted to transmit motion from the hollow shaft to the common shaft in one direction only.

2. In an electric motor generator, a motor unit and a generator unit having casings arranged end to end, a common shaft extending through both casings, bearings for the common shaft, end housings for the bearings for the common shaft supported by the casings, a hollow shaft surrounding the common shaft within the motor unit, bearings for the hollow shaft intermediate the bearings for the common shaft, housings for the bearings for the hollow shaft supported by the casings, an armature for the generator unit mounted upon the common shaft, an armature for the motor unit mounted upon the hollow shaft, reduction gearing between the hollow shaft and the common shaft and an overrunning clutch between the common shaft and the reduction gearing.



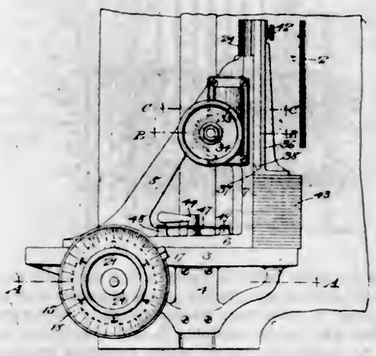
1,375,320. GRAPPLE FOR OIL-WELLS AND THE LIKE. CLARENCE E. REED, Houston, Tex. Filed July 21, 1919. Serial No. 312,300. 14 Claims. (Cl. 294—110.)

1. A grapple for oil wells comprising a main body, a plurality of gripper jaws pivotally connected thereto intermediate of their length at different points about the same, said jaws being in cross section of curved segmental form to provide a split tube-like body to conform to the bore of the well, a finder arranged coaxially with the segmental jaws, spreader means slidable on the main body

and coaxially arranged with and between the upper ends of the jaws, an operating connection between the finder and the spreader means, said main body at its upper end having means for attachment to a suspending member, substantially as described.

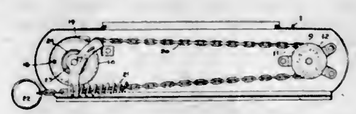
1,375,321. MOP-HOLDER. FRED ROUNDS, Los Angeles, Calif. Filed Oct. 11, 1920. Serial No. 415,968. 3 Claims. (Cl. 15—54.)

1. A mop holder comprising a bar having a rod pivoted to one end thereof with the swinging end of said rod provided with means for connecting the same to the other end of said bar to form a clamp, and means for yieldably drawing the pivoted end of said rod to said bar.



1,375,322. MAGAZINE FOR HAND-FIREARMS. WALDO E. ROSEBUSH, Spokane, Wash. Filed June 25, 1920. Serial No. 391,581. 3 Claims. (Cl. 42—50.)

3. A magazine for firearms, comprising a casing provided at the upper ends of the sides with upper and lower spring tongues and a main supporting portion, and of which the upper tongue forms part of the main portion and is adapted to be engaged by the uppermost cartridge and pressed outward by the same on the cartridge leaving the magazine and forms part of the corresponding lower tongue which latter receives an increased tension by the outward movement of the upper tongue to bear firmly

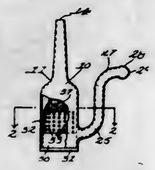


against the sides of the next following cartridge to hold the latter against displacing the uppermost cartridge.

1,375,323. DIMENSIONING-GAGE FOR LINOTYPE-SLUG CUTTERS. VERNON ROYLE, Paterson, N. J. Filed Apr. 8, 1915. Serial No. 19,996. 3 Claims. (Cl. 29—67.)

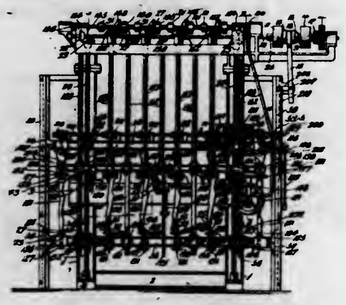
1. In a gage, the combination with a supporting frame and a knee frame arranged to slide along the supporting frame, of a screw for locking the frames in the desired adjustment and a spring arranged to coact with the screw to hold the frames in contact when the screw is loosened.

1,375,324. ROLL-FILM-TURNING DEVICE. KOTARO SAYO, San Francisco, Calif. Filed July 1, 1920. Serial No. 393,379. 4 Claims. (Cl. 95—31.)



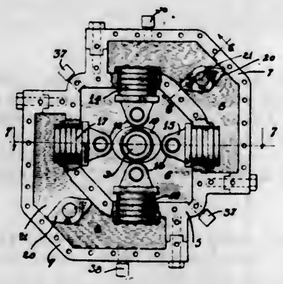
1. A camera having a film winding roll, a wheel operatively associated with said winding roll, and a flexible element rove around said wheel and which when pulled rotates the roll so as to wind the film thereon, said flexible element having one end free from connection with and disposed in the position to be grasped exteriorly of the camera.

1,375,325. INHALER. WILLIAM HENRY SCHAEFER, New York, N. Y. Filed June 29, 1920. Serial No. 392,762. 3 Claims. (Cl. 128—199.)



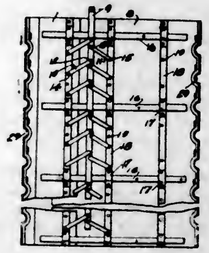
1. An inhaler comprising a cylindrical body, a pair of conical tubes formed integrally therewith, a hollow mouthpiece integral with said body, a flanged cap at the lower

open end of said body, and a perforated and slitted sheet, said perforate sheet being rolled up into a tube with its



slitted end overlapping the other end, the tube being carried by the cap and adapted to receive cellular material impregnated with a medicament.

1,375,326. COPYING-LATHE. CHARLES L. SCHWARZ, Philadelphia, Pa. Filed Nov. 6, 1916. Serial No. 129,738. 6 Claims. (Cl. 142—13.)



1. In a copying lathe, a frame having vertically directed stationary guides, an article carriage engaging said guides and having a cross bar, sleeves laterally adjustable on said cross bar, shafts rotatable in said sleeves and having means to engage an article blank, centering devices vertically and laterally adjustable on said carriage and engaging the article blanks, a master pattern on said carriage, means to rotate said shafts and said master pattern, means to reciprocate said carriage in a rectilinear path in a vertical plane, said shafts rotating in a reverse direction when the direction of movement of the carriage is reversed, and devices controlled by said master pattern to shape the article blanks to conform to said master pattern, said shaping devices including a cutting frame swingingly supported at its upper end, and yielding means to move the lower end of said cutting frame toward said carriage.

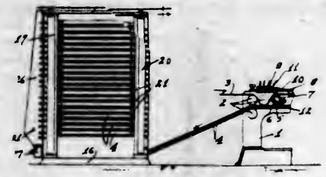
1,375,327. VARIABLE-SPEED POWER-TRANSMISSION DEVICE. ALFRED SHACKLETON, Chicago, Ill. Filed Apr. 20, 1917. Serial No. 163,340. 2 Claims. (Cl. 192—60.)

1. A fluid transmission comprising a casing, a plurality of fluid compartments therein, a plurality of pistons each provided with a roller at the inner end thereof and alternately reciprocative adapted to be projected into each of said compartments to alternately effect transfer of fluid from one end to the other in said respective compartments, means in each of said compartments between the pistons thereof controlling the transfer of fluid therethrough to vary the resistive pressure effect of the inward movement of a piston, and a driving cam cooperating with the rollers on the pistons and shaped to effect alternate reciprocative movements of the pistons in each of said compartments.

1,375,328. COLLAPSIBLE CONCRETE-FORM. JAMES CHARLES SHEELEY, Pasadena, Calif. Filed Apr. 7, 1920. Serial No. 372,035. 6 Claims. (Cl. 25—128.)

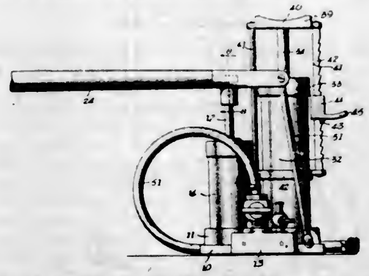
1. In a collapsible form for concrete construction, sidewalls, toggle means for longitudinally expanding and contracting said side walls, and toggle means for adjusting the distance between said side walls.

1,375,329. CLASP. EMMA I. SHOFF, East Prospect, Pa. Filed Nov. 29, 1920. Serial No. 427,178. 1 Claim. (Cl. 24—225.)



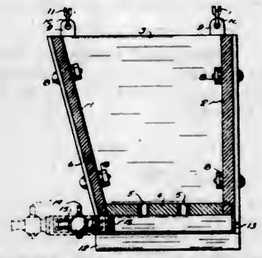
A clasp or fastener comprising independent members, a head carried by one of said members, said head having a constricted shank, the other of said members comprising a substantially U shaped body portion, means carried by said U shaped portion to facilitate its attachment to a support, a spring secured intermediate its ends to the intermediate portion of said U shaped portion, said spring having its ends bent transversely across said U shaped portion and curved toward the point of connection of the legs of said U shaped portion, and said head being adapted to enter said U shaped portion by passing said constricted shank between the curved ends of said spring substantially as described.

1,375,330. MANUFACTURE OF METALLIC SODIUM. ALBERT W. SMITH and WILLIAM R. VEAZEY, Cleveland, Ohio. Filed July 16, 1917. Serial No. 180,742. 9 Claims. (Cl. 204—21.)



1. The method of making metallic sodium, which consists in electrolyzing sodium carbonate in a fused mixture of such salt and another salt, the ingredients being proportioned so that such mixture has a lower melting point than any of its constituents.

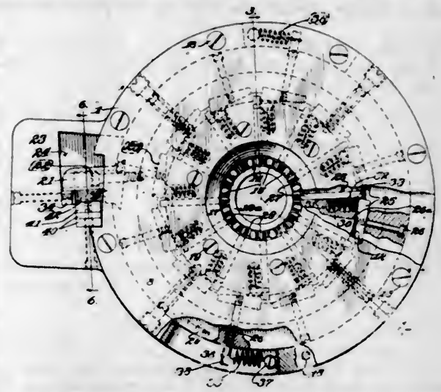
1,375,331. MUSIC-ROLL-STENCILING MACHINE. HAROLD J. SMITH, Chicago, Ill., assignor of one-half to Henry F. Baker, Chicago, Ill. Filed Feb. 19, 1920. Serial No. 360,021. 14 Claims. (Cl. 101—121.)



1. The combination with a stenciling machine, of a perforating machine, and means on said perforating machine for controlling the perforating and stenciling of music roll ribbons run through said machines.

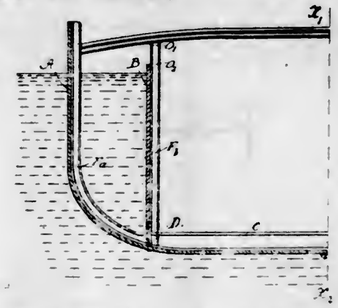
1,375,332. PNEUMATIC JACK AND PUMP. CLYDE STEPHENS, Rosendale, Mo. Filed Apr. 17, 1920. Serial No. 374,608. 5 Claims. (Cl. 138—9.)

4. In a device of the character described, a pneumatic jack having a cylinder, a piston mounted in said jack cylinder, a piston rod connected to said piston, a cross head mounted on said piston rod, depending bars carried by said cross head, and a guide collar carried by the lower ends of said bars and slidable on the periphery of said jack cylinder.



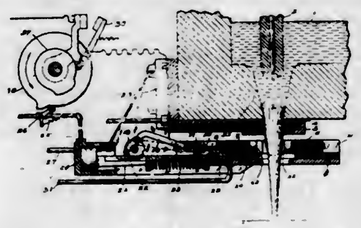
1,375,333. FLOWER-BOX. JOSEPH STRAUB, Rossville, Ga. Filed Oct. 9, 1919. Serial No. 329,422. 1 Claim. (Cl. 47—19.)

In a flower box, a body portion including body walls and a perforated bottom, cleats connecting said body walls and depending below said end walls to form feet, ears for said cleats, a pan removably disposed beneath said bottom upon said cleat terminations, a discharge faucet for said pan, and a perforated shield for said pan adjacent said faucet.



1,375,334. MACHINE FOR CLOSING CAGES OF ROLLER-BEARINGS. ERNEST G. STRONG and EARL C. ROHN, Canton, Ohio, assignors to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 19, 1920. Serial No. 367,050. 9 Claims. (Cl. 153—48.)

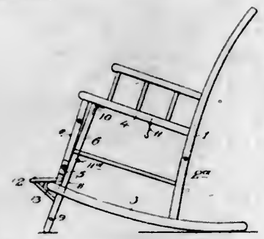
1. In a machine for closing in conical roller bearing cages, a press having a plurality of radially disposed horizontal plungers, angularly spaced to conform to the spacing of the bridges of a cage and having their inner



ends beveled to conform to the taper of such cage, cam means for simultaneously moving said plungers, and an operating member arranged to actuate said cam means.

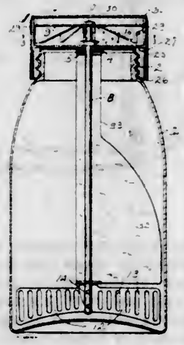
1,375,335. HYDRAULIC SHIP'S ARMOR. PIETER JACOBUS VAN POELVOORDE, Weltevreden, Batavia, Dutch East Indies. Filed Nov. 14, 1919. Serial No. 338,061. 1 Claim. (Cl. 114—240.)

A ship having outer and inner walls of which the outer wall is the usual wall of the vessel and the inner wall extends from the bottom of the ship in spaced apart relation to the outer wall and with its upper edge open, whereby to form with the outer wall an upwardly opening chamber for the reception of a water mass.



1,375,336. GLASS-WORKING MACHINE. FRANK L. O. WADSWORTH, Pittsburgh, Pa., assignor to Ball Brothers Glass Manufacturing Company, Muncie, Ind., a Corporation of Indiana. Filed June 27, 1918. Serial No. 242,266. 3 Claims. (Cl. 49—5.)

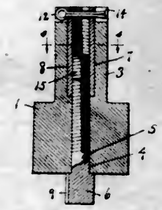
3. An apparatus for cutting streams of viscous materials comprising a pair of cup-shaped mating members



one having a cutting edge capable of entering the stream and the other having a projecting cutter capable of entering the stream overlappable upon the first-mentioned cup.

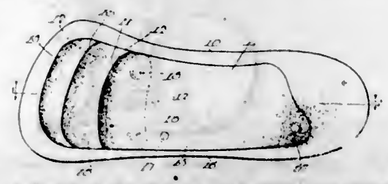
1,375,337. CHAIR. RUDOLPH WAGNER, Jersey City, N. J. Filed Jan. 19, 1920. Serial No. 352,375. 2 Claims. (Cl. 155—73.)

1. A chair having rockers to rock upon the floor and having a round above the rockers extending between the front side legs, a brace pivotally supported beneath the seat above the rockers and of sufficient length to extend below the rockers adapted to swing between the side legs of the chair and to extend in an upward direction against said round to retain the chair in a tilted position with the rockers upon the floor, and means upon the chair to cooperate with the brace to retain the latter above the rockers below the seat.



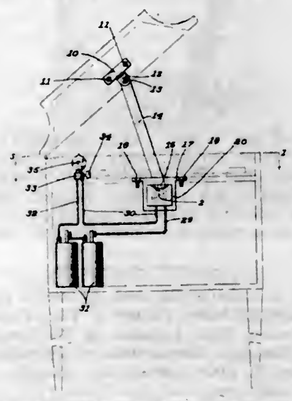
1,375,338. BEATER. OTTO P. WERNER and THEODORE W. ARNTZ, Milwaukee, Wis. Filed Aug. 11, 1920. Serial No. 402,933. 2 Claims. (Cl. 259—122.)

1. A beater comprising a cap having a fitting for operatively attaching said cap to a faucet, a jar adapted to be closed by said cap, a water motor carried by said cap and having a driving shaft extending into said jar, a whipper carried by said shaft adjacent the lower portion of said jar, and a baffle carried by said cap and extending from adjacent the upper side of said whipper a material distance upwardly toward the top of said jar and presenting a wide surface to allow the whipped material to build upwardly into the upper portion of said jar while preventing rotation of said whipped material, said motor being so positioned as to discharge waste water over the outer surface of said jar to maintain both the material being operated upon and the lighter, superposed, whipped material in a continuously cool state.



1,375,339. LOCK FOR CUTTING TOOL-PILOTS. FREDERICK WIARD, Detroit, Mich., assignor to American Standard Tool Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 23, 1919. Serial No. 319,323. 2 Claims. (Cl. 77—58.)

1. A tool of the character described comprising a body having cutting teeth formed thereon and a shank, said tool having a central hole extending its entire length and of two different diameters, that portion of the hole in the shank being greater than that in the body, a pilot and a threaded stem therefor extending through the smaller portion of the hole in the tool and into the larger portion,



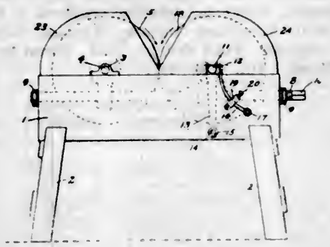
a tubular nut in the larger portion of the hole screwed onto said threaded stem of the pilot, a jam screw within said nut in contact with the end of said stem, and means to prevent the nut from turning in the shank of said tool said jam screw being removable independently of the pilot.

1,375,340. PLANTAR-ARCH AND METATARSAL FOOT-SUPPORT. LEE W. V. WILMS, Chicago, Ill. Filed June 30, 1919. Serial No. 307,702. 5 Claims. (Cl. 36—71.)

1. A device of the character described, consisting of an elongated supporting member adapted to fit and be worn within a shoe, a plantar muscle supporting plate secured near its front and rear ends to said member near its inner edge, said plate being of sufficient length to extend forwardly from the anterior portion of the heel to a point located about one inch under the long or metatarsal bones of the foot, said plate having its rear portion downwardly and transversely arched, and an upwardly curved section transversely mounted on said member above and extended forwardly of the front portion of said plate.

1,375,341. AUTOMATIC LIGHTING DEVICE FOR TALKING-MACHINES. EDWARD K. WIZNER, Milwaukee, Wis. Filed Aug. 2, 1919. Serial No. 314,957. 1 Claim. (Cl. 240—2.)

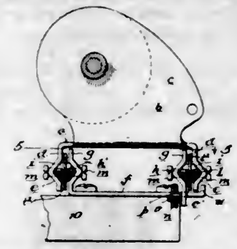
In an automatic lighting device, the combination with a talking machine cabinet, and a cover hingedly engaged



therewith, of a source of electrical energy disposed within said cabinet, a slotted bracket secured upon one side of the cabinet, a block removably engaged in said slotted bracket, said block having a concave recess in its upper edge, a pair of electrical contacts engaged in said block entering into said recess, an electric lamp, connections between said lamp and one of said contacts, other connections between the opposite contact and said battery, an arm pivotally engaged with the cover of said cabinet, and a contact carried at the lower end of said arm, said contact being adapted to rest in said recess upon said contacts when said cover is in a raised position.

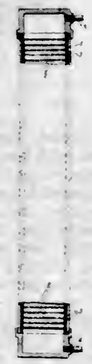
1,375,342. CUTTING-TOOL. JAMES M. YATER, Nowata, Okla. Filed Apr. 5, 1920. Serial No. 371,564. 6 Claims. (Cl. 77—72.)

1. A tool of the class described comprising an elongated member, outstanding pins carried by the member, said pins comprising a series of pairs with the pins of one pair spaced longitudinally of the member, a block coacting with each pair of pins and provided with openings into which said pins extend, expanding members engaged with the elongated member adjacent the opposite ends of the blocks, said expanding members forcing the blocks outwardly upon movement inwardly of the elongated member, and cutting blades carried by each of the blocks.



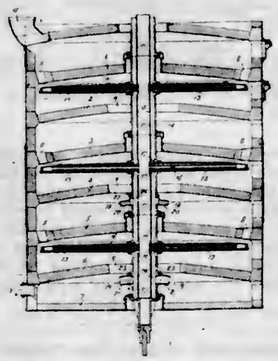
1,375,343. GRINDSTONE. SHERMAN R. ADAMS and LLOYD C. ADAMS, Long Beach, Calif. Filed Mar. 30, 1920. Serial No. 369,893. 1 Claim. (Cl. 51—168.)

A grind stone including a frame, a grinder wheel journaled in said frame, a pair of arms fulcrumed in said frame, a shaft journaled in the upper ends of said arms, a second grinder wheel secured on said shaft for engaging said first grinder wheel, springs engaging said arms for maintaining said second grinder wheel in engagement with said first grinder wheel, means for driving said grinder wheels for sharpening a tool therebetween, and means for varying the tension of said springs.



1,375,344. TYPEWRITING-MACHINE. FRANK H. ARMSTRONG, Auburn, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Oct. 16, 1917. Serial No. 196,867. Renewed Sept. 24, 1919. Serial No. 325,962. 28 Claims. (Cl. 197—69.)

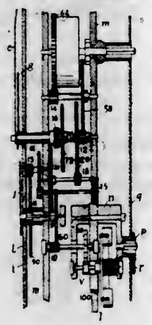
1. In combination, a platen carriage and a support therefor, the carriage and the support being provided with coöperating raceway flanges, one of the flanges being movable and means being provided for normally pressing it toward its companion flange, said movable flange being



composed of independently-movable sections, for the purpose set forth.

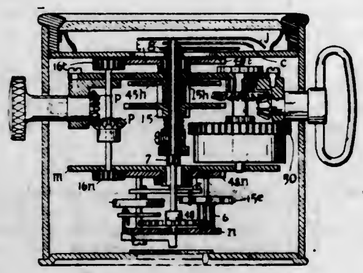
1,375,345. METHOD OF PRODUCING CATALYZERS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 15, 1918. Serial No. 240,223. 13 Claims. (Cl. 23—28.)

1. The process which comprises producing catalyst by treating a copper body to form a copper salt thereon and then depositing finely divided reduced copper from said salt upon the same.



1,375,346. METALLURGICAL FURNACE. DUDLEY BAIRD, Berkeley, Calif., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed June 17, 1920. Serial No. 389,702. 5 Claims. (Cl. 263—26.)

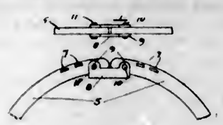
1. In a metallurgical furnace the combination with a plurality of hearths and means for causing a stream of



material to fall from one hearth to another, of an air conduit whose exit end is so positioned that, when the furnace is in operation, said end is immediately behind said stream, thus being adapted to direct a blast of air into contact with the falling material.

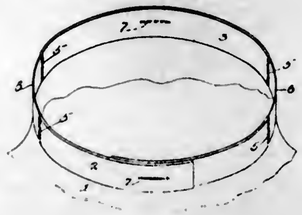
1,375,347. HAND-SETTING MECHANISM FOR TIMEPIECES. SAMUEL W. BALCH, Montclair, N. J. Filed June 5, 1920. Serial No. 386,874. 6 Claims. (Cl. 58—7.)

1. In a timepiece, hands therefor, controlling means therefor, a main frame with bearings for the hand arbors, a connecting gear train, an auxiliary frame by which the controlling means is carried and which is circularly adjustable about the axis of one of the arbors of the connecting gear train for setting the timepiece, a setting indicator and connecting means between the auxiliary frame and the setting indicator by which the setting of any portion of a minute is indicated.



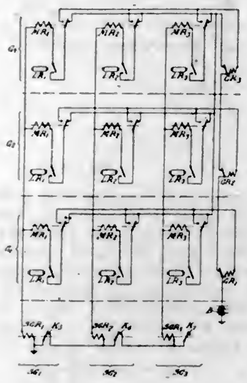
1,375,348. HAND-SETTING MECHANISM FOR TIMEPIECES. SAMUEL W. BALCH, Montclair, N. J. Filed Sept. 23, 1920. Serial No. 412,281. 3 Claims. (Cl. 58—7.)

1. In a timepiece, hands therefor, controlling means therefor, a main frame with bearings for the hand arbors, a connecting gear train, an auxiliary frame by which the controlling means is carried and which is circularly adjustable about the axis of the second hand arbor for setting the timepiece, a setting indicator, and connecting means between the auxiliary frame and the setting indicator by which the setting of any portion of a minute is indicated.



1,375,349. ARMORED TREAD FOR TIRES. ARTHUR L. BENNER, Elgin, Ill. Filed July 7, 1919. Serial No. 308,999. 2 Claims. (Cl. 152—16.)

2. In a means for holding tire armor onto a wheel, a pair of rings, one of said rings being composed of two parts hinged together and a trough shaped link pivoted to one of said members near the unhinged end thereof with the floor of the trough toward the inside of the ring,



lugs on the walls of said trough embracing the other part of said ring and a bolt extending through said lugs and said last named part.

1,375,350. NECKBAND FOR SHIRTS. ALEX BERNSTEIN, Chicago, Ill. Filed Feb. 3, 1919. Serial No. 274,779. 2 Claims. (Cl. 2—41.)

1. A neck band comprising an outside surface ply, an inside surface ply and reinforcing material between said plies, the reinforcing material being in several pieces, the total length of which is less than the length of the neck band and means for fastening these pieces in place, whereby separated portions of the neck band are left without reinforcement.

1,375,351. CALL-DISTRIBUTING ARRANGEMENT FOR TELEPHONE PLANTS. GOTTHILF ANSGARIUS BETULANDER, Södertörns Villastad, and NILS GUNNAR PALMGREN, Stockholm, Sweden, assignors to The Relay Automatic Telephone Company, Limited, Strand, London, England. Filed Nov. 23, 1920. Serial No. 426,044. 8 Claims. (Cl. 179—18.)

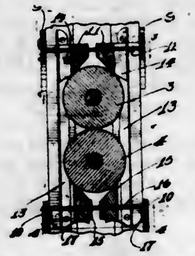
1. In means for effecting the successive connection of simultaneously calling telephone lines, the combination of a number of lines, a number of relays adapted to mark corresponding lines as calling, the lines and relays being divided into a plurality of groups, a group relay allotted to each group and adapted to operate upon a call occurring in its group, and means adapted upon such group relay operating to prevent more than one of the marking relays from remaining operated.

1,375,352. PAINT VEHICLE. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed June 12, 1917. Serial No. 174,253. 3 Claims. (Cl. 134—56.)

1. A mixture of a hydrogenated oil; tung oil; and marine animal oil.

1,375,353. PAINT COMPOSITION. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed June 12, 1917. Serial No. 174,254. 11 Claims. (Cl. 134—39.)

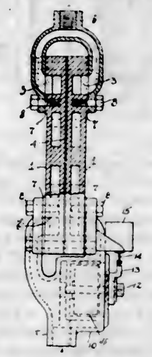
1. As a new composition of matter, a mixture of a soft and flowing hydrogenated oil, and an anhydrous pigment, the mixture being devoid of water, free or combined.



1,375,354. PAINT VEHICLE FOR ANHYDROUS PIGMENTS. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed June 12, 1917. Serial No. 174,257. 8 Claims. (Cl. 134—56.)

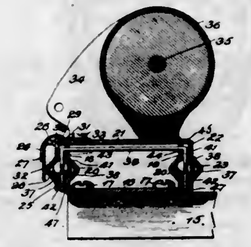
1. A paint-vehicle comprising marine animal oil and tung oil, in their untreated commercial condition.

1,375,355. PAINT COMPOSITION. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed June 12, 1917. Serial No. 174,258. 8 Claims. (Cl. 134—39.)



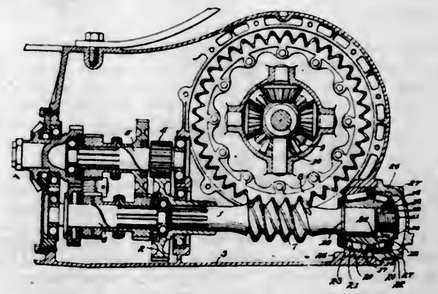
1. A paint-composition comprising marine animal oil and tung oil, in their untreated commercial condition; and an anhydrous pigment.

1,375,356. STRIPPING MECHANISM FOR WRINGER-ROLLS. THOMAS J. BONNIWELL, Chicago, Ill. Filed Oct. 2, 1919. Serial No. 327,977. 3 Claims. (Cl. 68—32.)



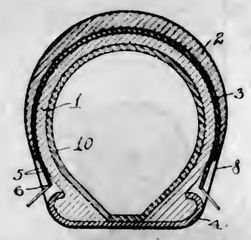
1. In a wringer, the combination with the rolls thereof, of stripper bars contacting with the rolls, and means for securing said bars in place, comprising a transverse rod at each end, extending transversely through said bars, to non pivotally secure said bars within the wringer frame.

1,375,357. ELECTRIC WATER-HEATER. CYRUS M. BOSWORTH, Lakewood, and ALOYSIUS G. BOESEL, Cleveland Heights, Ohio. Filed Feb. 7, 1920. Serial No. 356,896. 8 Claims. (Cl. 219—39.)



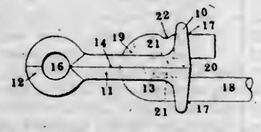
1. A unit for an electric water heater comprising a flat hollow body provided with water inlet and outlet openings, and a heating electric resistance element applied to one face of said body, such openings nowhere intersecting such face.

1,375,358. TYPEWRITING-MACHINE. LEWIS B. BALDGES, Brooklyn, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Dec. 22, 1917. Serial No. 208,403. Renewed Sept. 21, 1920. Serial No. 411,813. 30 Claims. (Cl. 197—69.)



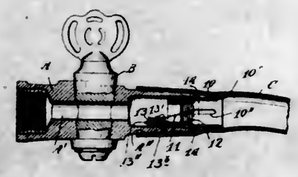
1. A platen-supporting structure for a typewriting machine comprising a traveling platen-carrying member provided with a pair of raceway rails, a bed member provided with a pair of raceway rails coöperating with the rails on the traveling member to form raceways, the rails on one of said members being rigid and immovable relatively to the member and both having their edges extending into close proximity to the adjacent face of the other member and adapted to engage the same to prevent movement of the members toward each other, and antifriction rolling elements in the raceways.

1,375,359. THRUST-BEARING. TRACY V. BUCKWALTER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 21, 1920. Serial No. 352,938. 16 Claims. (Cl. 64—50.)



16. In gearing, a driving shaft, an inner bearing member sleeved on one end of said shaft and having reversely coned bearing surfaces, said driving shaft having an annular shoulder near one end against which the inner end of said inner bearing member abuts and having a reduced end portion adjacent to the outer end of said inner bearing member, a member adjustably mounted on the reduced end of said driving shaft, said member having a portion adapted to engage the outer end of the inner bearing member for clamping the same against the annular shoulder of said driving shaft, series of rollers for the reversely coned surfaces of said inner bearing member, outer bearing members for said rollers and means for maintaining said outer bearing members at a predetermined distance apart.

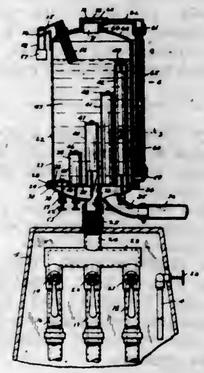
1,375,360. APPARATUS FOR VULCANIZING RUBBER. WILBUR B. BURKE, Cleveland, Ohio, assignor to The Electric Vulcanizing Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Feb. 16, 1916, Serial No. 78,572. Divided and this application filed Jan. 10, 1917. Serial No. 141,570. 6 Claims. (Cl. 219—19.)



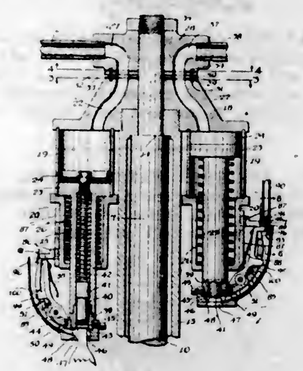
1. As an article of manufacture, a vulcanizing element, consisting of a layer of unvulcanized rubber and an electric heating element held in direct contact therewith.

1,375,361. BRAKE-ROD JAW. STERLING H. CAMPBELL, St. Louis, Mo. Filed Oct. 15, 1919. Serial No. 330,944. 4 Claims. (Cl. 287—20.5.)

1. A brake rod jaw having a pair of arms, a rod seat arranged between said arms, a rod base provided with a pair of openings each completely surrounding one branch of a looped rod and a retaining recess between said base and seat into which the rod is adapted to be bent to prevent retrograde movement of the rod relative to the jaw.



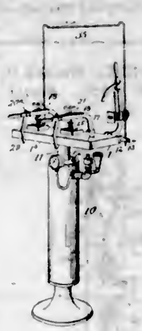
1,375,362. AUTOMATIC VALVE FOR GAS-COCKS AND THE LIKE. JOHN J. CAREY, Brooklyn, N. Y. Filed Feb. 17, 1920. Serial No. 359,405. 10 Claims. (Cl. 284—18.)



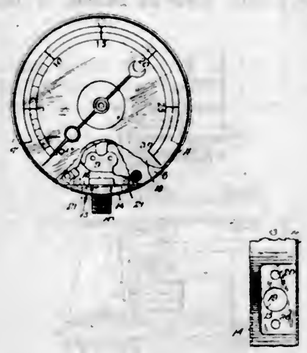
1. In a device for controlling the flow of fluids, a casing having a passage for the fluid, a tube secured to said casing within said passage and projecting therefrom at one end, a valve carrier movable lengthwise of said tube, a valve connected with said carrier and adapted to close the passage through the tube, a spring tending to move the carrier so as to seat the valve, and a member movable longitudinally on the outside of the exposed portion of the tube so as to be engaged by a hose applied on the tube, said member being adapted to move the valve carrier to the valve-opening position.

1,375,363. LIQUID-DISPENSING DEVICE. FREDERICK S. CARY and GEORGE E. RUSSELL, Wilmington, Calif. Filed Aug. 18, 1919. Serial No. 318,407. 1 Claim. (Cl. 221—100.)

In a liquid dispensing device, a hollow supporting member, a plurality of supply pipes extending upwardly therethrough, valves arranged in said supply pipes, a tank arranged above said support, said tank having a secondary bottom to form a separate discharge chamber at the lower end of the tank, a tubular member connecting the upper ends of the supply pipes with the chamber in the upper portion of the tank, the discharge chamber at the lower end of the tank being provided with an outlet opening, a plurality of discharge tubes seated in the bottom of the tank and extending upwardly therefrom, the lower ends of which tubes communicate with the discharge chamber at the bottom of the tank, valve stems passing upwardly through the bottom of the tank and through said tubes, valves carried by the upper ends of said stems and normally closing the upper ends of said tubes, and handles on the lower ends of said stems.



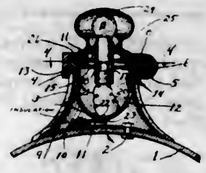
1,375,364. RECEPTACLE CAP OR CLOSURE APPLYING APPARATUS. ROBERT G. CLARK, Brooklyn, N. Y., assignor to Aaron Johnson, Brooklyn, N. Y. Filed Jan. 29, 1918. Serial No. 214,298. 21 Claims. (Cl. 226—84.)



1. In receptacle capping apparatus, the combination of a revoluble receptacle support; fluid actuated plunger mechanism superposed to and rotatable with said support; cap applying means carried by said plunger mechanism; a fixed head contiguous to the plunger mechanism having a port connected to the source of motive actuating fluid and to which port the plunger mechanism is connected at a predetermined point in the movement of said mechanism; and a port in said head with which the plunger mechanism is placed in communication during a predetermined portion of its movement to exhaust the plunger actuating motive fluid.

1,375,365. GENERATOR UNIT. WARREN F. CLARK, Cleveland, Ohio, assignor to The Steam-Electric Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 24, 1919. Serial No. 292,520. 16 Claims. (Cl. 18—18.)

1. In a device of the character described a combination with a plate member, a rod mounted adjacent one side of the plate member, of a clamping device comprising an arm, one end of which is pivotally mounted upon such rod, capable of sliding along the rod and a movable presser member carried by the said arm and capable of moving upon the arm and transversely with respect to the hot plate.

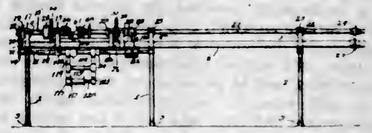


1,375,366. PRESSURE-GAGE. ERNEST B. CAOCKER, Bridgeport, Conn., assignor to The Ashcroft Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 10, 1918. Serial No. 227,671. 4 Claims. (Cl. 73—109.)

1. In a pressure gage, the combination with a dial and pointer mechanism and sensitive element associated therewith, and a socket piece having a plane flat seating surface, of a drawn or pressed metal inclosing case of circular contour having a portion of its peripheral wall depressed to form a flat bearing surface to receive the flat bearing surface of the socket piece, and means for attaching the socket piece to its seating.

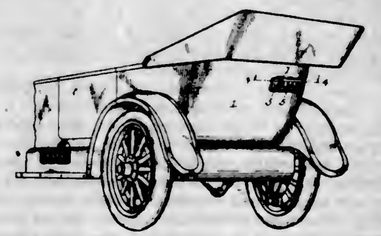
1,375,367. DETECTOR-SIGNAL. SIDNEY DAWSON, Chicago, Ill., assignor, by direct and mesne assignments, to Dawson Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1917. Serial No. 171,881. 6 Claims. (Cl. 177—314.)

3. A hollow standard, a signal, seating means on the standard and coöperating seating means on the signal between its ends whereby the signal may be positioned in the standard with one end exposed and the other end concealed within the standard, locking means for securing the signal in either position, illuminating means in one end of said signal, and a contact on the other end thereof,



and a coöperating contact on the standard and connections whereby when the signal is positioned with its contact within the standard, the illuminating means will be active.

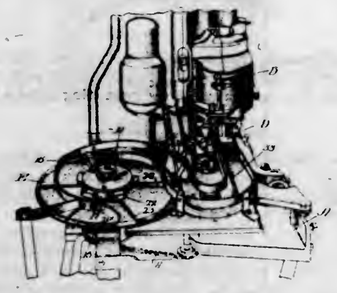
1,375,368. PROCESS OF MAKING CATALYTIC MATERIAL. SAMUEL DRUCKER and WILLIAM SIECK, Jr., Chicago, Ill. Filed Nov. 7, 1919. Serial No. 336,448. 2 Claims. (Cl. 23—28.)



1. The process of making a nickel catalyzer which consists in first precipitating nickel carbonate from an aqueous solution of nickel salt by means of a soluble carbonate, then washing the precipitate to remove all soluble salts, then adding a powdered inert non-reducible material, then drying the mixture without calcining, and finally reducing the dry mixture in an atmosphere of hydrogen.

1,375,369. WRAPPING-MACHINE. OTTO E. EDSTROM, San Francisco, Calif., assignor, by direct and mesne assignments, of one-third to Albert B. Olston, Barrington, Ill., and two-thirds to Edstrom Machinery Company, Gary Station, Ill., a Corporation of Illinois. Filed Sept. 19, 1918. Serial No. 254,801. 18 Claims. (Cl. 242—7.)

5. In a machine of the class described the combination of spaced spring controlled cam actuated members for holding a plurality of cable portions side by side, a rotatable support therefor, and means for winding a wire around said cable portions.



1,375,370. IDENTIFYING MEANS FOR AUTOMOBILES. HARRY W. FALCONER, Wood county, near Perrysburg, Ohio. Filed Mar. 3, 1919. Serial No. 280,204. 1 Claim. (Cl. 40—10.)

In an automobile, a frame, a casing without said frame having an opening therein, said opening having its marginal edge wall outwardly bulged, and means fixed to

said frame and having an outwardly protuberant portion complemental to and fitting into the bulged wall of said opening, and said protuberant portion having an identification part in register with said opening.

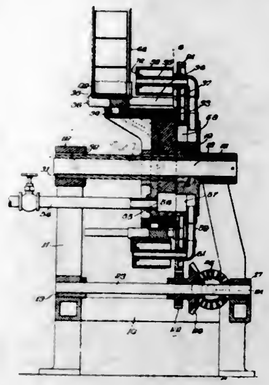
1,375,371. CAN-FEEDING MECHANISM. PAUL W. FLEISCHER, West Hoboken, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 3, 1916. Serial No. 101,471. 7 Claims. (Cl. 193—1.)

1. A can conveying mechanism comprising, in combination, a continuously rotating can support having a can-carrying surface on which cans may slide, fixed guides extending around the center of rotation for guiding the cans away from said center, can-propelling members movable to points below and to points above the can-carrying surface of said support, and yielding can-spacing means movable radially toward and from said center and on and relative to which the cans may roll rearward for the purpose of being spaced before said can-propelling members rise to can-engaging and propelling position.

2. A can-conveying mechanism comprising, in combination, a continuously rotating can support having a can-carrying surface on which cans may slide, fixed guides extending around the center of rotation for guiding the cans away from said center, can-propelling members movable to points below and to points above the can-carrying surface of said support, and can-spacing means movable radially toward and from said center and on and relative to which the cans may roll rearward for the purpose of being spaced before said can-propelling members rise to can-engaging and propelling position, said can-spacing means being arranged substantially in radial line with said can-propelling members.

3. A can-conveying mechanism comprising, in combination, a continuously rotating can support having a can-carrying surface on which cans may slide, fixed guides extending around the center of rotation for guiding the cans away from said center, inclinable can-propelling members mounted at their inner ends on pivots which are arranged transversely to said members and movable to points below and to points above the can-carrying surface of said support, and can-spacing means movable radially toward and from said center and on and relative to which the cans may roll rearward for the purpose of being spaced before said can propelling members rise to can-engaging and propelling position.

4. A can-conveying mechanism comprising, in combination, a continuously rotating can support having a can carrying surface on which cans may slide, fixed guides extending around the center of rotation for guiding the cans away from said center, can-propelling members movable to points below and to points above the can-carrying surface of said support, and can-spacing means movable independently of said can propelling members for the purpose of entering between and spacing the cans, and actuating means for moving said can-propelling members and said can spacing means.

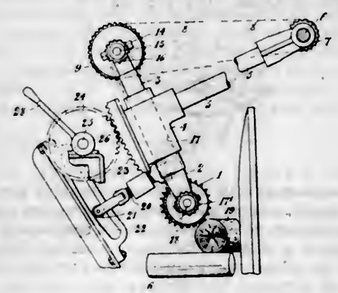


5. A can-conveying mechanism comprising, in combination, a continuously rotating can support, fixed guides extending around the center of rotation for guiding the cans away from said center, and tiltable can-propelling members mounted at their ends only on pivots which are arranged transversely to said members, said members having their other ends movable to points below and to points above the can-carrying surface of said support.

1,375,372. DISK WHEEL. GEORGE H. FORSYTH, Harvey, Ill. Filed Aug. 6, 1920. Serial No. 401,709. 15 Claims. (Cl. 301—64.)

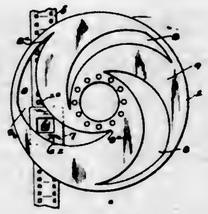
1. In a wheel, the combination of hub plates, a disk forwardly concave and having its central portion disposed between the plates, and clamping bolts securing the plates upon the disk, the disk provided adjacent the hub plates with radially elongated pockets.

1,375,373. PROCESS OF DRYING CANS. FRED G. FOSS, Newark, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 3, 1919. Serial No. 280,496. 6 Claims. (Cl. 34—24.)



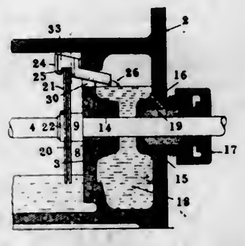
6. A process for drying cans and the like comprising applying a rapidly moving current of air to a circumferential portion of the can and advancing the application of said current to successive portions of the body lengthwise of the can.

1,375,374. BARKING-MACHINE. PER ALBERT FRESK, Robertsfors, Sweden. Filed Aug. 26, 1919. Serial No. 320,033. 5 Claims. (Cl. 144—208.)



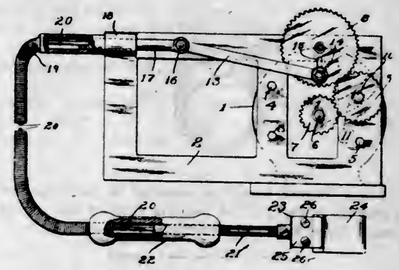
1. In barking machines wherein a toothed roller is resting on the log to be barked the said roller not only turning the log, but feeding it also in the longitudinal direction, the roller permitting of being positioned obliquely with

respect to the log, an arrangement involving that the shaft transmitting motion to the roller is yieldingly dis-



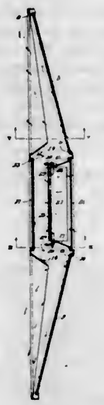
posed to the turning movement of the roller spindle which is required to enable the roller to assume an oblique position.

1,375,375. MOTION-PICTURE-PROJECTION-MACHINE SHUTTER. ARCHIE C. FEIST, Long Beach, Calif. Filed June 24, 1920. Serial No. 391,365. 6 Claims. (Cl. 88—19.3.)



1. A motion picture projection machine shutter having substantially crescent shaped openings arranged to mask and unmask a film diagonally across the same.

1,375,376. OIL-SEAL FOR BEARINGS. VALÈRE A. FYNN, St. Louis, Mo., assignor to Western Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 30, 1920. Serial No. 355,051. 10 Claims. (Cl. 286—26.)

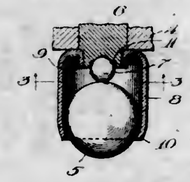


10. The combination with the crank case of a compressor or the like, of a crank shaft, a stuffing box for said crank shaft carried by said case, a partition in said case carrying one of the main bearings for said crank shaft and forming an auxiliary oil chamber at the side of said bearing adjacent to said stuffing box and a main oil reservoir at the opposite side of said bearing, and means for maintaining the pressure in the auxiliary oil chamber above that in said main reservoir.

1,375,377. POLISHING-MACHINE. HERMAN W. GABEL, San Francisco, Calif. Filed Nov. 11, 1920. Serial No. 423,461. 2 Claims. (Cl. 51—175.)

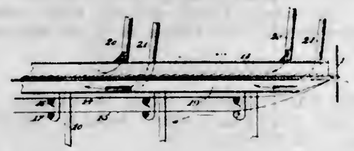
1. A polishing machine comprising a motor, a frame carried thereby and having a slide bearing, a rod in said slide bearing, suitable gears to reciprocate said rod, a flexible shaft connected with said rod, and a polishing pad connected with said flexible shaft and reciprocated thereby.

1,375,378. VENTILATOR. HARRY W. GADDESS, Baltimore, Md. Filed Jan. 9, 1920. Serial No. 350,378. 9 Claims. (Cl. 98—31.)



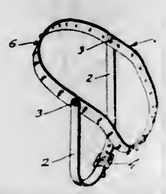
5. A ventilator of the class described comprising a casing of substantially trapezoid shape in plan and having front and rear walls with an air inlet in that portion of its front wall which is parallel to its rear wall, normally open and wind closed shutters for controlling the flow of air through the inlet into the casing, angularly arranged front wall members at the opposite sides of said air inlet, the rear wall of said casing being provided with outlets at the end portions thereof, and air deflecting members extending inwardly of the casing from said rear wall thereof, said air deflecting devices each comprising a U-shaped member comparatively wide at its inner end and tapering toward its outer end.

1,375,379. CASTER AND THE LIKE. JOHN A. GAMBLE, Chicago, Ill., assignor of one-fifth to John B. Arata, Chicago, Ill. Filed Jan. 31, 1921. Serial No. 441,149. 2 Claims. (Cl. 16—151.)



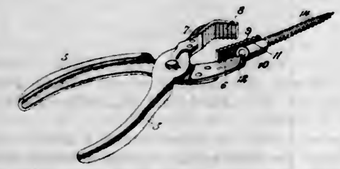
1. As a new article of manufacture, a caster or the like comprising in combination a stem adapted for engagement with an article of furniture, there being a circular socket on the lower end of said stem, a cylindrical shell secured to the lower end of the stem, a relatively large ball in the lower portion of the shell, the lower edge

of the shell being inturned and of a size smaller than the central portion of the relatively large ball to retain said ball in position within the shell, and a relatively small



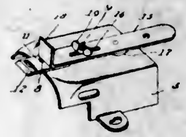
ball having its upper portion working in the socket of the stem and its lower portion bearing against the top of the relatively large ball, substantially as described.

1,375,380. CHOCOLATE-COOLING MACHINE. HENRY C. GATES, Cedar Rapids, Iowa. Filed June 24, 1918. Serial No. 241,688. 4 Claims. (Cl. 34—12.)



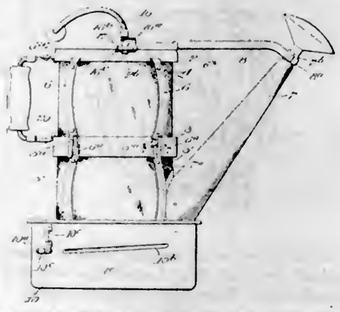
3. Delivery apparatus for chocolate-coating machines, comprising an endless apron to receive the candies as coated and to carry them from the coating machine, a supporting and carrying apron therefor, a support for the double apron, an air-tunnel inclosing the same through the larger part of its outward travel from the coating machine, and cold-air conduits connecting with said tunnel.

1,375,381. HAIR-NET HOLDER. JAMES MARTIN GOLDEN, Los Angeles, Calif. Filed Feb. 14, 1921. Serial No. 444,749. 4 Claims. (Cl. 132—49.)



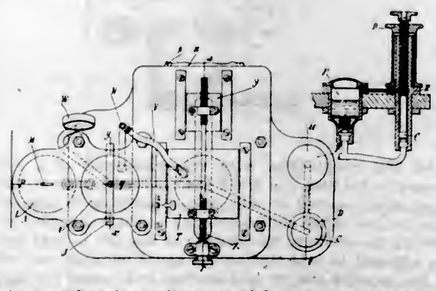
4. The combination with a hair net of a head encircling member having means for engaging said net, and a chin strap connected to the head encircling member for holding the latter in position.

1,375,382. CORK-EXTRACTOR. GEORGE W. GOMBER, Conyngham, Pa., assignor to A. W. Drake Manufacturing Co., Hazleton, Pa., a Corporation of Pennsylvania. Filed June 8, 1920. Serial No. 387,380. 5 Claims. (Cl. 65—48.)



1. A cork extractor comprising a pair of pivoted levers having jaws, and a screw mounted on one of the jaws and extending outwardly and longitudinally therefrom.

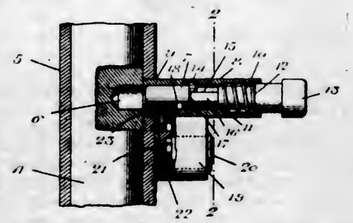
1,375,383. NEEDLE-PLATE HOLDER. ROBERT E. GOSNEY, Bishop, Calif., assignor of one-half to Henry C. Traver, Bishop, Calif. Filed Dec. 16, 1919. Serial No. 345,342. 1 Claim. (Cl. 112—45.)



In combination with the cap of a stitching machine, of longitudinally alining spaced lugs adjacent one end thereof and designed to be received in the openings of a knife needle plate or a lip needle plate, a headed bolt passing through the bottom of the cap, a binding nut thereon, a bar having an elongated slot through which the bolt passes, said bar having its outer end formed with an upstanding lip, a compressible element upon the under face of the bar to the rear of the slot therein, the lipped end of the bar adapted to rest on the plate engaged by the studs, and a winged nut engaging with the bolt and contacting with the bar for compressing the latter against the plate.

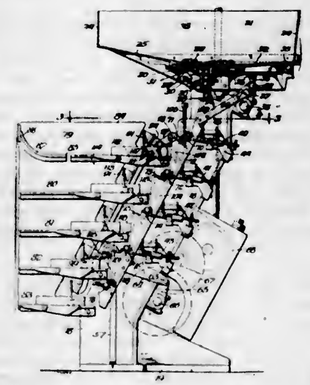
1,375,384. COLLAPSIBLE CAN. AUGUST C. GUHL, Chicago, Ill. Filed Mar. 17, 1920. Serial No. 366,541. 13 Claims. (Cl. 150—49.)

13. In a collapsible can, in combination with rigid top and bottom members, a flexible fabric member which connects said rigid member, and struts for holding the flexible members extended, said fabric member having a pouring spout leading from its lower part, and having at the top a partial closure flange or web extended from the side walls inward toward the middle at the side of the fabric member toward the spout.



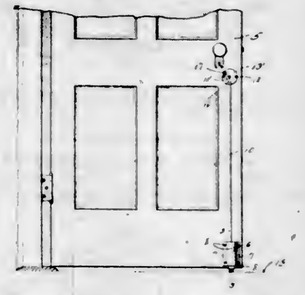
1,375,385. METHOD OF TESTING MATERIALS AND MACHINE EMBODYING THE SAME. RENÉ GUILLERY, Paris, France. Filed Apr. 2, 1920. Serial No. 370,864. 4 Claims. (Cl. 265—14.)

1. A method for testing material consisting in applying varying force to a test specimen of the material by means



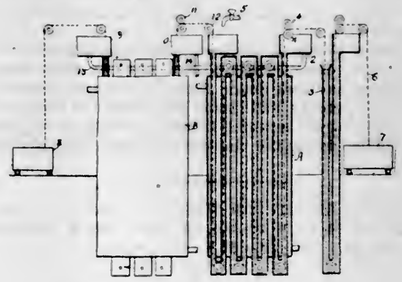
of fluid under pressure, causing such pressure to produce a proportional change in the volume of liquid in a container, causing the yield of the specimen to effect a proportional change in the volume of said container, then determining the limiting load for proportionality by observation of the amount of compensation required to annul the variations of the volume of liquid in said container subjected to an increase which is a function of the amount of elongation or of sag of the test specimen, and to diminution which is a function of the value of the load.

1,375,386. AUTOMOBILE-LOCK. ROBERT J. HALE and WILLIAM T. DOYLE, Lexington, Ky., assignors of forty-five per cent. to said Hale, one-tenth to James A. Wilmore and Fred. H. Ryan, and forty-five per cent. to Carrie Doyle, Lexington, Ky. Filed Feb. 2, 1920. Serial No. 355,847. 1 Claim. (Cl. 70—90.)



A lock comprising a tubular casing, a plunger bolt slidable therein and having one end projecting therefrom for manual operation to project said bolt at its other end from the casing, said casing and bolt having shoulders within the casing, a coiled spring surrounding the bolt and confined between said shoulders for retracting said bolt, said bolt having a reduced portion with a flat side, the member carried by said casing and bearing against said flat side to prevent the bolt from turning and to limit the movement thereof by said spring, said casing having a slot and the bolt having a notch to register with said slot, a second casing secured to the tubular casing, and a spring-pressed key controlled bolt within the second casing slidable at an angle to the plunger bolt within said slot to bear against the plunger bolt and snap into said notch when the plunger bolt is projected.

1,375,387. SORTING-MACHINE. HANS N. HALVERSEN, Vineland, N. J., assignor to Kimble Glass Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 13, 1919. Serial No. 344,616. 12 Claims. (Cl. 83—92.)

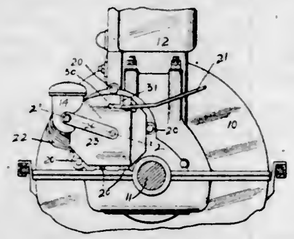


1. In a sorting appliance of the character described, the combination of a plurality of scales arranged in an inclined series in the same vertical plane adjusted for different weights, a plurality of classification-compartments arranged in an inclined series in the same vertical plane, and conveying means to individually convey the bodies to be sorted to the scales in succession and to deliver such bodies to the classification compartments corresponding to the scales which they overbalance, substantially as described.

1,375,388. DOOR-STOP. WALDO HARALSON, Las Animas, Colo. Filed Nov. 14, 1919. Serial No. 337,972. 2 Claims. (Cl. 292—167.)

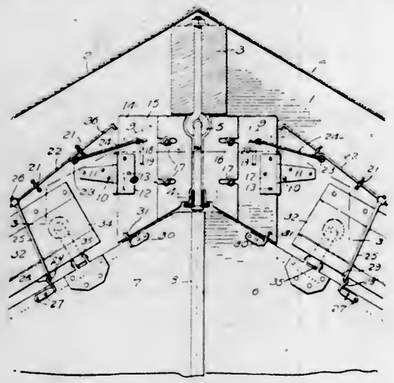
1. A door stop comprising a casing having a movable floor engaging foot and means for holding the latter yieldably in engaging position, a lifting rod connected with the foot, a crank to one end of which the lifting rod is pivoted and having at its other end a handle movable on said pivot into and out of contact with the lifting rod and a pivot engaged through the crank at one side of a line connecting the pivot and the crank handle.

1,375,389. WARP-DYEING MACHINE. WALTER F. HASKELL, Westbrook, Me. Filed Apr. 4, 1918, Serial No. 226,591. Renewed Sept. 15, 1920. Serial No. 410,482. 2 Claims. (Cl. 8—19.)



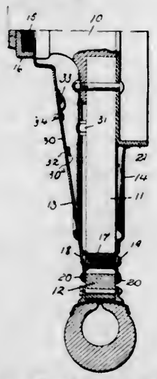
1. In a warp dyeing machine of the character described wherein the warp is drawn through a continuous coil of tubes containing the dyeing solution, a series of unit coils through which the warp is drawn in succession, said coils having inlets for the dye, means for supplying the last unit with the regular dyeing solution, the overflow for the exhausted liquor from the last unit being connected with the inlet of one of the preceding units.

1,375,390. TIMER-COVER DEVICE. JENS JESPERSEN, Des Moines, Iowa. Filed Feb. 10, 1920. Serial No. 357,675. 1 Claim. (Cl. 200—23.)



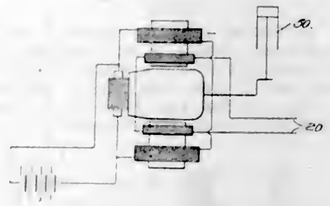
In combination with an engine housing having a plurality of bolts therein and a timer thereon, a cover member of a single piece of resilient material formed to have a body portion to extend over the timer and a flange formed from the edge of said body portion, said flange being designed to rest against the engine housing and have its edge against the bolts of said engine housing, the

parts being so arranged that said cover member may be sprung to position where it will be received between said



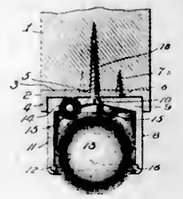
bolts and when released it will be yieldingly held over said timer by said bolts.

1,375,391. CLOSURE FOR HAY-FORK-TRACK OPENINGS. JOHN A. JOHNSON, Walcott, N. D. Filed Apr. 28, 1920. Serial No. 377,304. 10 Claims. (Cl. 20—16.)



1. In a device as set forth, the combination with the front of a barn provided with a hay fork track opening, of sliding hay fork doors, hingedly mounted closures for the track opening, and means connecting the sliding doors and the hingedly mounted closures, whereby upon opening the sliding doors, the closures will simultaneously swing open.

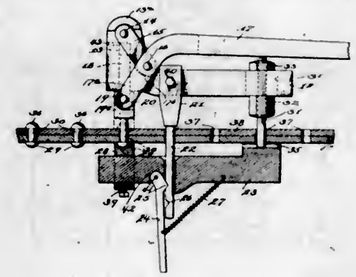
1,375,392. GUARD FOR WHEELS. JOHN O. JOHNSTON, Newark, N. J. Filed Jan. 30, 1920. Serial No. 355,107. 2 Claims. (Cl. 301—37.)



1. A guard for wheels comprising members fitting against the sides of the wheel, one of the members having an opening adjacent to the brake band of the wheel, the member having slits at the edge of the opening, a lid for the opening, lips on the lid and adapted to project into the slits, and a spring on the lid and bearing against the inside of the member.

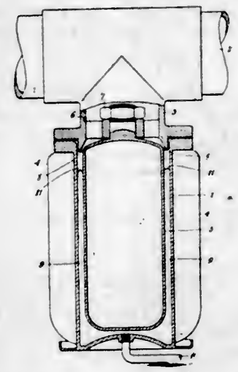
1,375,393. HIGH-FREQUENCY MOTOR-ALTERNATOR. GEORGE A. JOHNSTONE, Chicago, Ill. Filed Oct. 7, 1918. Serial No. 257,162. 1 Claim. (Cl. 290—31.)

The combination with a gas engine and a storage battery of a motor alternator having its shaft connected with that of the gas engine, the said motor alternator having a direct current field system and a direct current winding whereby it may run as a motor for starting said gas engine on current supplied by the said battery and as a generator for charging the said battery with power supplied by the engine, and an alternating current winding giving a frequency higher than that resulting from the number of main poles and comprising conductors which are inductively operated upon simultaneously, said conductors being connected into a single circuit and spaced so that the electro-motive force generated is in the same direction at any instant throughout the circuit, whereby the device may be utilized in radio signaling.



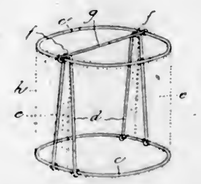
1,375,394. BALL-CASTER. THOMAS KELLY, Poulton-Wallasey, England. Filed Apr. 2, 1920. Serial No. 370,776. 4 Claims. (Cl. 16—151.)

1. A ball bearing caster comprising an upper or ball race member comprising a flat disk or plate having a depending marginal flange, a ball cage member having its upper portion fitted within said flange and comprising a flat disk or plate and a depending marginal flange, a relatively large ball arranged within the flange of the cage member, means for holding the ball therein, a series of small balls resting upon the large ball at spaced points around the top thereof, and a plurality of ball seats provided in the disk of the cage member, said seats opening out at the top, whereby the small balls are adapted to contact with the roll against the upper member.



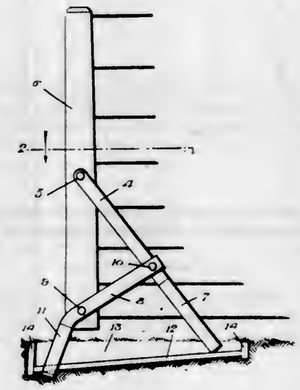
1,375,395. RIVETING-MACHINE. JOHN L. L. KROOK, Proctor, Vt., (now deceased and by decree of distribution to A. Elizabeth Krook.) Filed Aug. 12, 1918. Serial No. 249,456. 5 Claims. (Cl. 78—48.)

1. A riveting machine or device comprising the combination with a supporting bar having a recessed part, of toggle links jointed to said bar adjacent said recessed part, a pin or plunger working in said recessed part and carrying a riveting block, a forked lever to which said links are jointed and the forked forward toggle part of which lever has jointed connections with said riveting block, a resistance bar provided with an aperture, a second



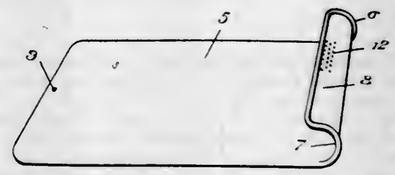
riveting block attached to said resistance bar, a steadying bar attached to said supporting bar, locking means for said steadying bar, and additional steadying means attached to said supporting bar.

1,375,396. REFRIGERATING APPARATUS. ERNST GOTTHARD ERICSSON LANGBERT, Stockholm, Sweden. Filed Dec. 26, 1918. Serial No. 268,382. 4 Claims. (Cl. 62—1.)



1. A cooling apparatus having an outer cooling surface and consisting of an outer heat conducting casing adapted to contain a refrigerant, a receptacle adapted to contain a congealable substance and arranged inside said casing so as to be surrounded by the refrigerant, and means for circulating the refrigerant through the casing.

1,375,397. BUTTER-COOLER. GEORGE LAWRENCE, Adelaide, South Australia, Australia, assignor to William Usher, Norwood, South Australia, Australia. Filed Jan. 31, 1919. Serial No. 274,233. 2 Claims. (Cl. 45—132.)

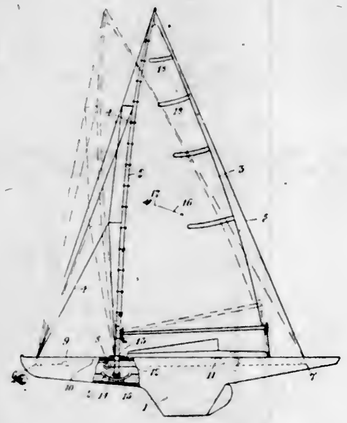


2. In a butter cooler of the character described a collapsible cover comprising top and bottom rings, a diagonal bar carried by the top ring, inverted U-shaped members swingably connected at opposite points on the bottom ring and having their medial portions formed with depressions adapted to engage and bear against the diagonal bar, when the members are swung upwardly so as to maintain the frame in an extended position, flexible connecting members between the rings and a covering of absorbent material secured to the rings and forming the sides and top of the cover.

1,375,398. POST-ANCHOR. CASWELL LEE LEONARD, Corinth, Miss. Filed Feb. 27, 1920. Serial No. 361,611. 4 Claims. (Cl. 189—29.)

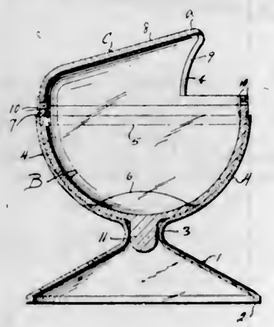
1. In a post anchoring device, the combination with a post, of bars secured to the post, one bar having a loop shaped anchor below the post and the other bar having a loop-shaped foot at one side of the post, and an anchor plate to be embedded in the ground on which said foot bears, and under which said anchor extends.

1,375,399. PASTRY-BOARD. CASWELL LEE LEONARD, Corinth, Miss. Filed Apr. 27, 1920. Serial No. 377,106. 2 Claims. (Cl. 146—15.)



1. A device of the character described comprising a plate to lie on a support having one end bent back upwardly in overhanging position and forming a trough at said end of the plate, said bent back portion having a grater, whereby the grated material will fall on the plate and into the trough.

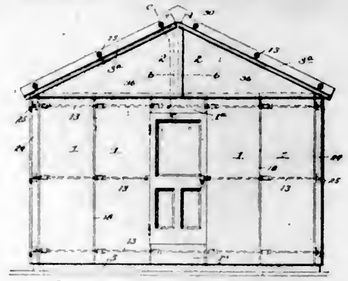
1,375,400. SAILBOAT-RIGGING. FREDRIK LJUNGSTRÖM, Brevik, Lidingön, Sweden. Filed Mar. 3, 1920. Serial No. 363,058. 7 Claims. (Cl. 114—91.)



1. A rigging for sail boats, characterized by the mast with the rigging being adjustable in the longitudinal di-

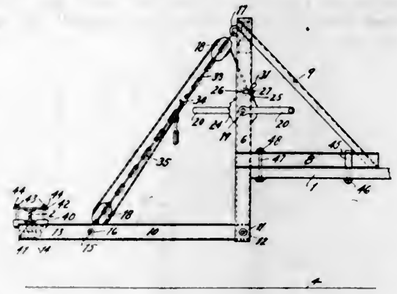
rection of the boat, and provided with an operating device by means of which the mast may, when sailing, be caused

to assume different slanting positions, in order to change the relative position of the pressure center of the wind on the sail.



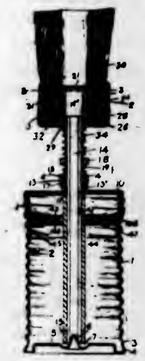
1,375,401. SERVING-BOWL. PAUL W. LUDDY, Brookland, D. C. Filed Nov. 3, 1920. Serial No. 421,562. 1 Claim. (Cl. 65—15.)

A device of the class described comprising, in combination, a stand provided with an upstanding hollow neck, a supporting base integral with and above the hollow neck, a plurality of webs and arms extending upwardly from the base, the arms extending upwardly farther than the webs, a continuous member supported by the arms, a bowl insertible through the continuous member and supported on the said base and webs, a cover for said bowl, depending fingers carried by the cover and contacting with the opposite faces of the bowl for holding the cover in applied position, said cover having its crown portion tapered toward a point to one side of the axial center of the bowl, the crown portion of the cover being provided with an entrance opening, the high point of the taper being adjacent the top of said opening.



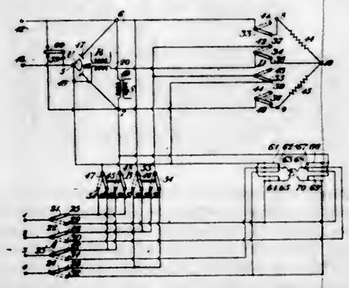
1,375,402. SECTIONAL BUILDING. CHARLES FREDERICK MCAVOY and DANIEL EDWARD MCAVOY, Long Island City, N. Y. Filed Jan. 9, 1919. Serial No. 270,340. 22 Claims. (Cl. 20—2.)

1. A sectional building having walls each composed of a series of like framed, double-walled, hollow units in a common plane; and tie-rods extending from end to end of



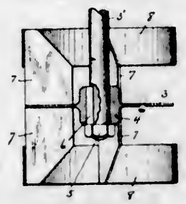
each wall through the several units, concealed therein, and holding said units under compression.

1,375,403. AUTO-TRANSPORTING DEVICE. JAMES M. MCDERMOTT, Springfield, Mass. Filed Mar. 17, 1920. Serial No. 366,497. 13 Claims. (Cl. 254—166.)



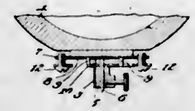
1. The combination, in an auto-transporting device, with a frame attachable to the rear end of a truck, and a lifter pivotally connected at the front end with said frame at the bottom, of means to support said lifter from said frame with the rear end of said lifter at different elevations from the ground.

1,375,404. FOUNTAIN LATHER-BRUSH. FRANK MCLAUGHLIN, Toronto, Ontario, Canada. Filed Oct. 12, 1920. Serial No. 416,549. 4 Claims. (Cl. 15—50.)



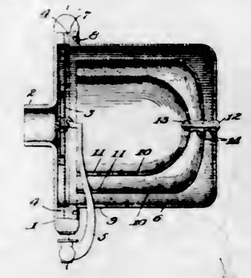
1. In a brush, a reservoir, a discharge tube leading from the reservoir, means for forcing the reservoir contents through the tube, a brush head longitudinally movable on said tube, whereby the discharge end of the tube may be carried from the brush base to and away from the free ends of the bristles of the brush.

1,375,405. APPARATUS FOR TESTING CAPACITY OF ELECTRIC CONDUCTORS. WILLIAM H. MARTIN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 22, 1918. Serial No. 213,174. (Cl. 175—183.)



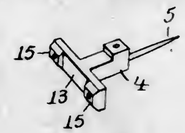
1. A testing apparatus comprising a Wheatstone bridge arrangement, an adjustable capacity forming one arm of the bridge, a circuit to be tested forming another arm of the bridge, and means included in part in each of said arms to adjust said capacity until the bridge is balanced.

1,375,406. AGITATOR. IRVING S. MERRELL, Syracuse, N. Y., assignor to Merrell-Soule Company, Syracuse, N. Y., a Corporation of New York. Filed July 2, 1919. Serial No. 308,339. 7 Claims. (Cl. 259—96.)



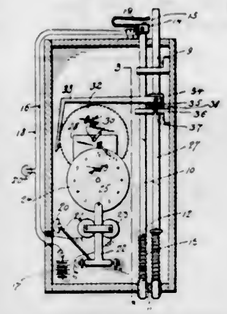
1. The combination with a tank of an agitator adapted for rotation about a substantially vertical axis and arranged within and eccentrically of the tank and closely adjacent a portion of the side wall of the tank, said agitator comprising means for producing outward radial throw of liquid drawn axially from opposite directions.

1,375,407. REPRODUCER. FRANK W. MINOR, Richmond, Va. Filed June 2, 1920. Serial No. 385,996. 3 Claims. (Cl. 274—35.)



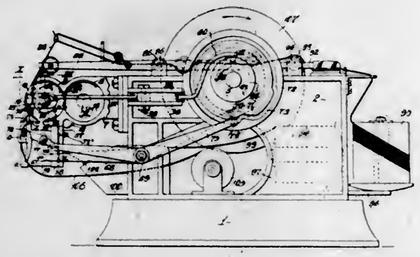
2. A tension bridge for sound reproducers comprising a substantially oblong body having a central opening therethrough, curved arms extending from opposite sides of the body at the opposite ends of the same and having their ends provided with openings alined with the central opening through the body, and fulcrum posts rising from the ends of the body at the sides opposite the respective arms.

1,375,408. RESONATOR-DOME FOR REPRODUCERS. FRANK W. MINOR, Richmond, Va. Filed June 2, 1920. Serial No. 385,998. 6 Claims. (Cl. 274—27.)



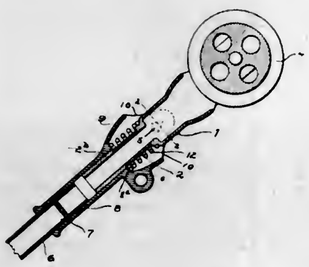
1. A sound reproducer provided on its open front side with a resonator comprising a tubular body having a closed front end and having an open rear end presented to and secured upon the reproducer and covering the front side of the same.

1,375,409. SOUND-BOX. GEORGE A. MOORE, Medford, Mass. Filed Apr. 3, 1920. Serial No. 372,377. 4 Claims. (Cl. 274—35.)



1. A sound box having a resonator diaphragm, a pivotal diaphragm, a needle arm, a pair of cross members clamping the pivotal diaphragm between them and disposed for the pivotal support of said needle arm, an end of the latter being attached to the resonator diaphragm, said parts being so constructed that substantially the ends alone of the cross members contact with the pivotal diaphragm.

1,375,410. SIGNAL AND REGISTERING MECHANISM FOR WELL-DRILLING RIGS. GEORGE D. MORRISON, Louisville, Ky. Filed Apr. 21, 1920. Serial No. 375,508. 8 Claims. (Cl. 234—1.)

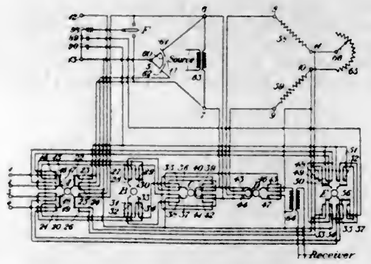


1. The combination with the rocking beam of a well-drilling rig; of a clock-driven record chart, a marker for making impressions on the chart, and actuating means for the marker operated by abnormal movements of the rocking beam.

1,375,411. STITCHING-MACHINE. CHARLES H. MYERS, St. Louis, Mo., assignor, by mesne assignments, to Acme Lock Stitch Sewing Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed June 17, 1918. Serial No. 240,291. 8 Claims. (Cl. 112—32.)

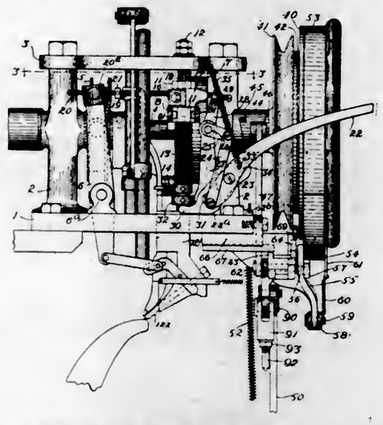
1. In a stitching machine, an oscillating arc shaped needle, a reciprocating thread-carrying bar, said needle and said bar each adapted to form a thread loop, a pushing element adapted to feed a locking thread into one of said loops, and means for severing said locking thread.

1,375,412. ELECTRICAL COLLECTOR. JACOB M. OLINGER, Springfield, Ohio. Filed Oct. 27, 1919. Serial No. 333,431. 8 Claims. (Cl. 191—52.)



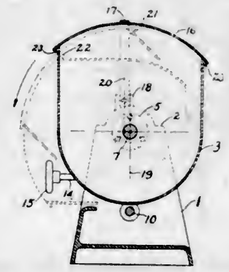
1. In a device of the character described, a contact carrying member, a pole member, said pole member having a portion arranged to receive a portion of said contact member in the individual assembled condition of the parts of each of said members, the interior of said pole member having notches the walls of which overhang, lugs on the exterior of said contact member, and a spring between said members to hold said lugs in said notches.

1,375,413. RADIATOR-OVERFLOW CONDENSER. LESLIE E. OPIE, Cedar Rapids, Iowa. Filed Apr. 21, 1919. Serial No. 291,515. 2 Claims. (Cl. 257—25.)



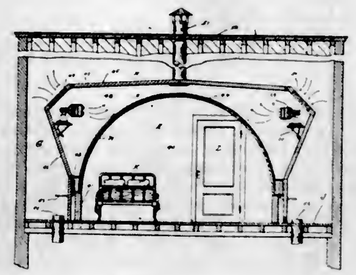
1. A condenser for engine radiators, comprising in combination with the radiator and its overflow pipe, a vessel, divided by an internal cone into two chambers, a tubular connection of the overflow pipe with the primary chamber, a passageway for steam and water extending from near the top of the primary chamber to near the bottom of the other chamber, and an air-vent at the top of the vessel.

1,375,414. APPARATUS FOR TESTING CAPACITY DEVIATIONS AND UNBALANCE OF ELECTRIC CONDUCTORS. HAROLD S. OSBORNE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 22, 1918. Serial No. 213,191. 8 Claims. (Cl. 175—183.)



7. A system for testing capacity unbalance and deviation comprising circuit terminals to which may be connected a plurality of conductors capable of arrangement in phantom and side circuit relation, means to arrange said conductors in phantom circuit relation with certain of said conductors in side circuit relation, a current source and a receiving device, and means to associate the one with the phantom circuit and the other with the side circuit thereby producing a cross-talk effect in the receiver, means for balancing out said cross-talk effect and thereby indicating the capacity unbalance between the phantom and side circuit, a standard capacity element, means to associate said conductors with said standard capacity element, and means to balance the difference between the capacity of said conductors and of said standard, said means being arranged to directly indicate the difference between the capacity of said conductors and said standard.

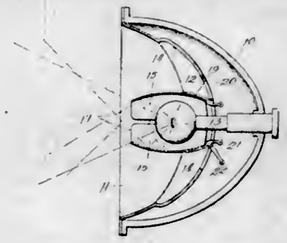
1,375,415. SEWING-MACHINE. WALTER PEARSON, Whitman, Mass. Filed June 29, 1914. Serial No. 847,865. 2 Claims. (Cl. 192—116.)



1. In a sewing machine, in combination, the driving shaft from which the stitch-forming instrumentalities are actuated, friction-driving devices for said shaft, manually-operated means for closing said devices together with graduated force to drive the machine with varying degrees of speed, a spring tending to open said devices to suspend the driving action, a detent for holding said devices closed together but under partly decreased pressure and driving with reduced energy, and a tripping device moving in unison with the driving shaft by which said detent is tripped to occasion arrest of the driving action.

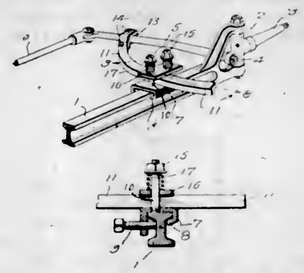
1,375,416. COVER FOR MIXERS. BRYAN D. PINKNEY, Newport, Ky. Filed Sept. 1, 1920. Serial No. 407,507. 1 Claim. (Cl. 259—45.)

A cover for mixers comprising a stationary curved member, a supporting framework for said member, a bowl with a curved top edge adapted to be trunnioned in a frame and fitting beneath said curved member, and means to tilt said bowl; the radius center of said curved member being eccentric with the axis of said bowl so that a clearance space under the curved member results as said bowl is tilted forward.



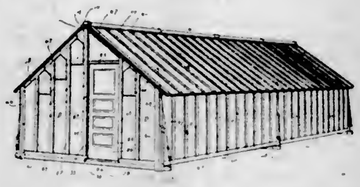
1,375,417. SLEEPING-COMPARTMENT. ROBERT N. RICHARDSON, Los Angeles, Calif. Original application filed Aug. 22, 1917, Serial No. 187,633. Divided and this application filed Mar. 4, 1919. Serial No. 280,546. 1 Claim. (Cl. 261—104.)

An apparatus of the character disclosed, including an arched wall, walls associated with and closing the ends of the arched wall, a door-way in one of said last named walls, and means for producing evaporation in intimate association with the arched wall, including a housing enveloping and being spaced from the arched wall, said housing having an air intake opening and an air outlet opening therein, means for moistening the outer surface of the wall, and means within the space between the housing and wall for producing currents of air and directing the currents over the outer moistened surface of the wall.



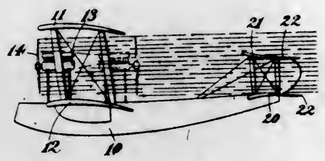
1,375,418. DIMMING DEVICE FOR HEADLIGHTS. WILLIAM A. SCHROEDER, Seattle, Wash. Filed Sept. 27, 1919. Serial No. 326,744. 7 Claims. (Cl. 240—45.)

1. In a headlight, the combination of a source of illumination, an outer reflector and a plurality of adjustable screens brightened on their inner surfaces to constitute reflectors, adapted when in open position to constitute a portion of the outer reflecting surface and adapted when in closed position to screen the light of the outer reflector and reflect the rays of light laterally, each of the screens



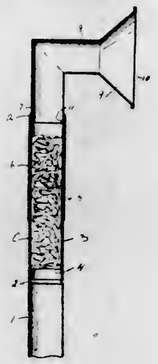
at its lower portion being configured to reflect rays of light upwardly toward the companion screen, substantially as described.

1,375,419. ATTACHMENT FOR STEERING MECHANISM OF MOTOR-DRIVEN VEHICLES. HARRY L. SCHULER, Bloomington, Ill. Filed Mar. 29, 1920. Serial No. 369,669. 2 Claims. (Cl. 280—89.)



1. The combination with a front axle of a motor driven vehicle having a knuckle joint, of a rearwardly extending arm on the hub body of the joint, a friction device carried by the axle, an arcuate element carried by the rearwardly extending arm of the hub body of the knuckle and operatively engaging with said friction device for frictionally holding the arm in the position in which it is set, said friction device including means between which the arcuate element engages to prevent excessive movement of the arcuate element sidewise, thereby relieving strain on the element and the rearwardly extending arm.

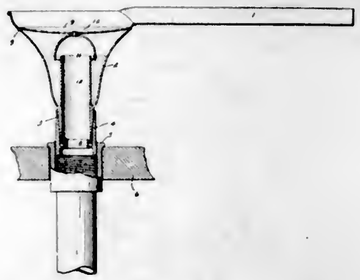
1,375,420. COLLAPSIBLE AND EXPANSIBLE SHELTER. JOSEPH E. SCHUMACHER, Los Angeles, Calif. Filed June 20, 1917. Serial No. 175,930. 4 Claims. (Cl. 20—2.)



4. A portable house including a frame, interengaging plaster board panels fitted upon the frame, said plaster board panels being reinforced by strips applied to opposite sides thereof, certain of the strips on one side of the panels being arranged to overlap adjacent panels, while certain strips on the opposite side of the panels abut each other at the meeting edges of the panels, and fastening means connecting the abutting strips to lock the panels together.

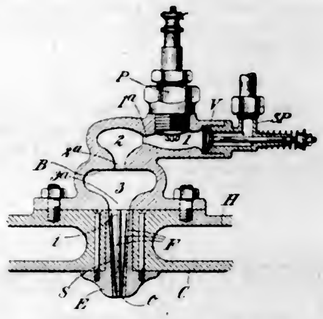
1,375,421. TAIL-PLANE AND THE LIKE FOR AIRCRAFT. HUBERT SCOTT-PAINE, Southampton, England. Filed Mar. 17, 1920. Serial No. 366,459. 2 Claims. (Cl. 244—29.)

1. In an aircraft, a trailing plane-structure provided with a plane formed with a reversed lifting chamber and so situated with relation to the airscrew that the said plane of reversed lifting chamber is fully exposed to the slip-stream.



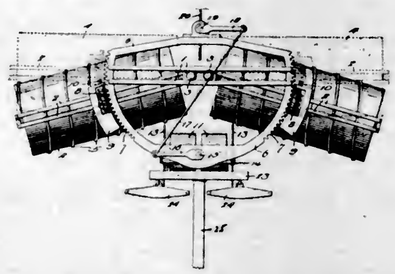
1,375,422. AIR-FILTERING DEVICE. GLEN D. SHEBER, Connell, Wash., assignor of two-fifths to Logan L. Long, Connell, Wash. Filed May 3, 1920. Serial No. 378,567. 3 Claims. (Cl. 183—49.)

1. An air filtering device of the character described comprising a tubular air inlet member, a sleeve larger in diameter than the inlet member, one end portion of said sleeve being extended inwardly and secured to the inlet member, a portion of said inlet member extending inwardly of the sleeve in annular spaced relation to the sleeve, an air filtering cartridge having a flared end, said flared end being disposed between and frictionally engaging the inwardly extending portion of the inlet member and the sleeve, and a tubular member disposed between and frictionally engaging the cartridge and the sleeve.



1,375,423. ADJUSTABLE DRAIN AND TRAP FOR REFRIGERATORS. BERNARD P. SMITH, St. Louis, Mo. Filed Jan. 5, 1921. Serial No. 435,260. 1 Claim. (Cl. 182—13.)

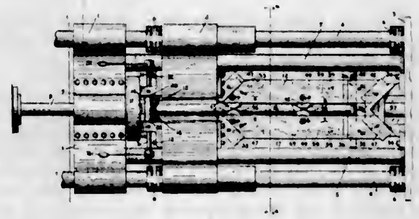
An adjustable drip-pan for refrigerators, composed of a horizontal-arm portion, a conical body to which one end of said arm is connected, a main gas-trap in said body, a strainer above said main gas-trap, a bearing-nipple to be connected to the drain-connection of the room, a U-shaped trap member on the interior of said nipple, and a tapered portion at the lower end of said conical body, projecting downwardly into the said U-shaped trap member, and forming a seal thereat between said nipple and said lower



end of the conical body, as the latter is rotated or rests within said nipple.

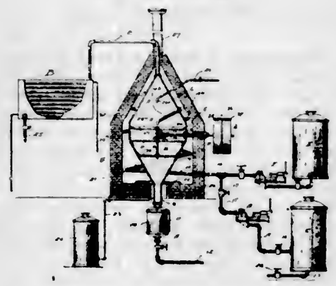
1,375,424. IGNITION DEVICE FOR INTERNAL-COMBUSTION ENGINES. FREDERICK ARTHUR SMITH, Brasted, England. Filed Jan. 19, 1920. Serial No. 352,424. 4 Claims. (Cl. 123—143.)

1. An ignition device which at its inner end has an inlet for an ignition charge of explosive mixture and is provided with an electric igniter and at its outer end terminates in a spout or flame-nozzle that extends toward or into the combustion-chamber of the engine, and which comprises a succession of chambers terminating at the inner end of the spout, each said chamber having a contracted outlet and being shaped so that its inner wall forms a baffle to check back-flow toward the igniter.



1,375,425. PULVERIZER. JESSE D. SMITH, Holton, Ind. Filed Apr. 10, 1920. Serial No. 372,771. 6 Claims. (Cl. 55—21.)

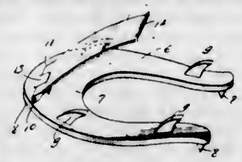
1. In a farm implement of the class described, the combination of a main frame including opposite gear faces,



secondary frames pivotally mounted on the main frame and carrying worms in operative engagement with the gear faces of the main frame, means for adjusting said worms to change the position of the rollers relative to the main frame, spirally ribbed rollers mounted on the secondary frames, a front truck, and means operatively connected to the front truck for steering the apparatus, said means including reversely controlled guiding disks.

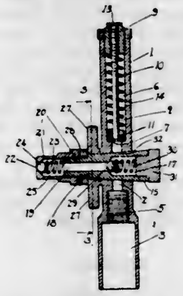
1,375,426. EXTRUSION-PRESS FOR THE MANUFACTURE OF STEEL TUBES. JAMES P. SNEDDON, Bayonne, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed July 27, 1918. Serial No. 246,977. 18 Claims. (Cl. 207—7.)

1. In a press of the class described, comprising a mandrel and means to present a blank for treatment thereby, means to support said mandrel and treated blank successively, said supporting means being constructed and arranged to be moved to blank-supporting position by action thereupon of the advancing blank.



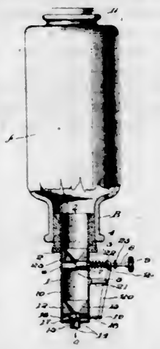
1,375,427. APPARATUS FOR REFINING OIL. SAMUEL F. STEPHENS, Los Angeles, Calif., assignor of one-third to Willis J. Boyle, Sr., and one-third to Charles G. Grant, Los Angeles, Calif. Filed Nov. 14, 1918. Serial No. 262,469. Renewed Jan. 24, 1921. Serial No. 439,692. 9 Claims. (Cl. 196—1.)

1. An apparatus for distilling hydro-carbons and the like, including a still, means for heating the still, a substantially flat and horizontally disposed rotary distributing and agitating plate mounted within the still, means for feeding hydro-carbon to the plate, and means for rotating the plate to cause the hydro-carbon to flow outwardly in a thin film over the flat face thereof and be discharged violently from the periphery of the plate in a thin spray which is distributed upon the walls of the still.



1,375,428. REMOVABLE HORSESHOE. HARRY D. TOBIN, Empire, Mich. Filed Mar. 18, 1920. Serial No. 366,883. 3 Claims. (Cl. 168—11.)

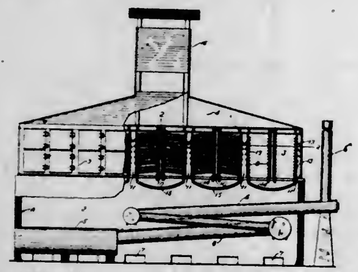
2. A horseshoe, comprising in combination a base plate having a transverse slot near its toe, a lock bar formed across the plate to the rear of the slot, an auxiliary plate, and a spring lock plate pivoted to the latter and adapted



to be received first in said slot and then snapped on said lock bar.

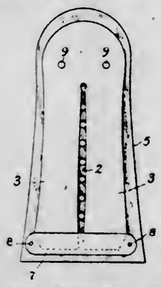
1,375,429. TIRE-VALVE DEVICE. GORDON VAN CAMP, Drayton, N. D. Filed July 17, 1920. Serial No. 397,045. 5 Claims. (Cl. 152—11.5.)

1. A tire valve device including a casing adapted to be affixed to a tire stem, an air passage in the casing and providing communication with the tire interior, a valve member carried by the casing and operable to open or close said communication, and an air chamber in said member communicable with the air passage when the member is in open position, means on said member adapted to be connected to a source of air under pressure, an airway in said connecting means extending from the exterior to said air chamber, and an inwardly opening check valve in said air chamber to prevent outward escape of air through said air-way.



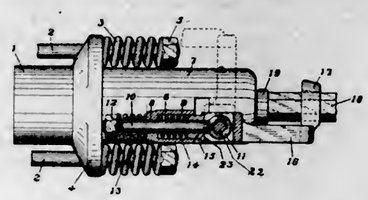
1,375,430. MEDICINE-MEASURING DEVICE. CLARENCE J. WALKER, Conneaut Lake, Pa. Filed Mar. 13, 1919. Serial No. 282,303. 2 Claims. (Cl. 221—112.)

1. In combination with a bottle having a neck communicating with the interior of the bottle and extending downwardly when the bottle is in inverted position, a second neck extending upwardly from the bottom of the inverted bottle, a removable stopper for the last-mentioned neck, a stopper for the first-mentioned neck having a bore therethrough, a tube having its upper end entering the bore in said last-mentioned stopper and communicating



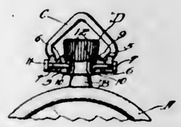
with the interior of the bottle, an obstruction within the tube and located intermediately of the ends thereof, said obstruction having a hopper-shaped upper portion with an opening at its apex, said obstruction provided with a transverse passage immediately beneath said opening, the bottom of said transverse passage having a second opening in alinement with the first-mentioned opening, a piston fitted to reciprocate in said transverse passage and adapted to cover both of said openings, a stem connected to said piston and projecting through the side of said tube, a button on the outer end of said stem, a lever having its upper end freely fitted about the stem, a bracket extending from the tube and carrying said lever, a coil spring extending about the stem and acting on the stem and said lever whereby to hold the piston and lever in an initial position, a collar on the stem spaced from the end of the lever when the parts are in the initial position but adapted to engage the lever end when the stem is moved, a second obstruction in the base of the tube provided with a hopper-shaped upper portion with an opening in its apex and a transverse passage beneath the opening and having a discharge port in its bottom vertically beneath the opening, a piston traveling in said last-mentioned passage, and a stem connected to the piston and to the lever end of said lever, said pistons adapted to alternately open and close their respective openings.

1,375,431. EVAPORATOR. JOHN T. WANN, Berkeley, Calif., assignor, by mesne assignments, to Robert C. Newell and Wm. C. Murdoch, Jr., San Francisco, Calif. Filed May 4, 1920. Serial No. 378,754. 4 Claims. (Cl. 34—39.)



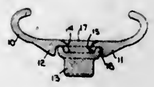
1. An evaporator comprising a housing, a heating, a drying and an exit chamber formed therein, a plurality of pairs of interspaced tray receiving chambers formed in the drying chamber, inlet flues arranged on one side of each of said chambers and communicating with the heating chamber, an exit flue on the opposite side communicating with the exit chamber, and a heat deflecting means positioned below each pair of tray receiving chambers.

1,375,432. TWIN-SPRING ARCH-SUPPORTER. JOSEPH H. WILBER, Winthrop, Mass. Filed July 28, 1919. Serial No. 314,372. 1 Claim. (Cl. 36—71.)



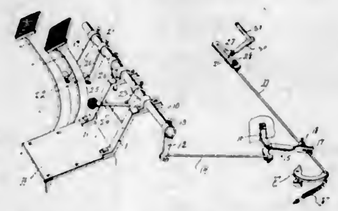
A twin-spring arch supporter comprising a plurality of separate parallel fingers, and a resilient plate having laterally projecting lugs adapted to be bent about the edges of one of said fingers for attaching it thereto.

1,375,433. TOOL-RETAINER FOR HAMMER-DRILLS. RUSSELL H. WILHELM, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 16, 1919. Serial No. 304,569. 3 Claims. (Cl. 121—32.)



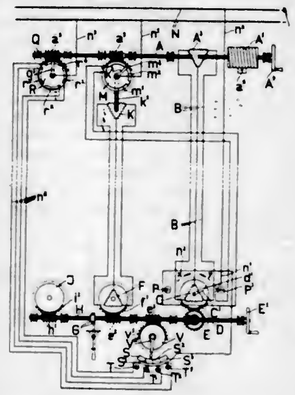
1. In a tool retainer for percussive tools, the combination of a front head having a plurality of counterbores, bolts in said counterbores, compression springs surrounding said bolts between the bases of said counterbores and the rear ends of the bolts for yieldingly resisting forward movement of the bolts, a steel retainer pivotally secured to the forward ends of the bolts, collars surrounding the bolts at the forward ends and adapted to bear on flat portions at the ends of the steel retainer and compression springs surrounding said bolts between the before mentioned ends of the counterbore and said collars for continuously exerting pressure to force the collars against said flat portions of the retainer and maintain the retainer in open or closed position.

1,375,434. WATCH-BOW FASTENER. EDWARD J. WITTMAN, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed Nov. 5, 1920. Serial No. 421,854. 3 Claims. (Cl. 58—97.)



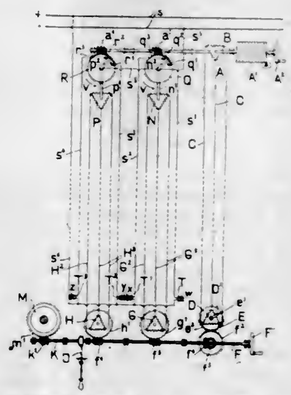
1. In combination, a watch pendant provided with a pair of oppositely disposed shoulders on each of which is formed a bore that alines with the other, there being an annular channel between the two shoulders which intersects each bore, and a pocket formed in the channel at each such point of intersection, a bow having its ends arranged adjacent the pendant shoulders, there being in each bow end a bore adapted to aline with the bores in the shoulder, a pin connection extending through each bow end and proximate shoulder, the pin end lying toward the center of the pendant being disposed within the annular channel and having a bend toward the pocket therein, and a crown associated with the pendant arranged partly within the annular channel in a manner to conceal the bent ends of the pin therein substantially as described.

1,375,435. DEMOUNTABLE RIM. ALVA W. WOODWARD, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed July 29, 1920. Serial No. 399,719. 1 Claim. (Cl. 301—11.)



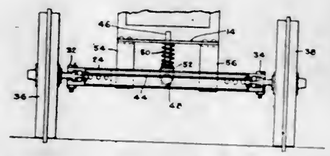
In a tire carrying rim, an aperture in said rim, an inwardly extending flange on said rim surrounding said aperture, and a driving lug secured in said aperture, being riveted over on the outer periphery of said rim, and having a circumferential flange to fit over said inwardly extending flange on the rim.

1,375,436. ACCELERATING DEVICE FOR MOTOR-CARS. FAY J. YOUNG, Wayland, N. Y., assignor of one-half to John Kiel, Wayland, N. Y. Filed Feb. 21, 1920. Serial No. 360,316. 3 Claims. (Cl. 74—39.)



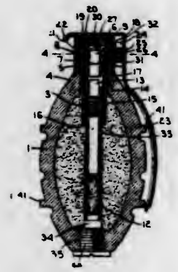
1. In a motor car, the combination with a speed controlling pedal and a throttle valve, of a shaft extending in front of said pedal and having thereon an outwardly extending arm operatively engaged by the edge face of the pedal whereby the shaft will be rocked by a depression of the pedal, operative connections between said rock shaft and the throttle valve to cause the opening of the throttle valve upon a rocking of the shaft in one direction, and an independent accelerator pedal operatively connected to said shaft and including an arm adjustably mounted upon the shaft, a rod pivotally connected to said arm, and a pedal plate detachably engaging the outer end of the rod.

1,375,437. LONG-DISTANCE SIGNAL AND CONTROL SYSTEM. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,069. 3 Claims. (Cl. 177—337.)



1. An apparatus of the class described, comprising a transmitter, a transmitter shaft, a receiver operated by and synchronously with said transmitter, a pointer rotatable with said receiver, a coöperating pointer coordinate to the pointer of the receiver, an object to be adjusted, means for adjusting said object, said cooperating pointer being operated by said object-adjusting means, electrical means for indicating the direction of rotation required for the object-adjusting means, said means being controlled by a contact device, said contact device being controlled jointly by said object-adjusting means and said transmitter shaft, a series of optical signals for indicating the amount of adjustment required for the object, a movable pointer coöperating with said signals, said pointer being positively connected to and operated by the object adjusting means, and electrical means controlled by the transmitter shaft for selectively operating the series of optical signals.

1,375,438. LONG-DISTANCE CONTROL AND SIGNAL DEVICE. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,071. 4 Claims. (Cl. 177—337.)

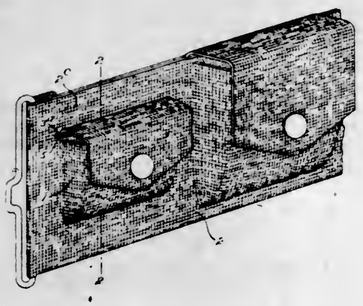


1. An apparatus of the class described comprising a transmitter, a transmitter shaft, a receiver, means connecting said transmitter and said receiver whereby they are actuated synchronously, a pointer operated by said receiver, a coöperating pointer, an object to be adjusted, means for adjusting said object, said coöperating pointer being connected to said object adjusting means, auxiliary transmitters operatively connected to the object adjusting means, auxiliary receivers operatively connected to said auxiliary transmitters, contact devices comprising sets of disks and arms operable by said transmitter shaft and said auxiliary receivers respectively, signaling devices, means connecting said signaling devices to said contact devices, one of said sets of disks which is connected to said transmitter shaft and one of said auxiliary receivers being provided with a greater ratio of rotation than the others, said sets of disks having means thereon for carrying along said arms when the transmitter shaft is rotated against the directing force exerted by the auxiliary receivers.

1,375,439. FRONT-AXLE DEVICE. GILBERT AMONSEN and GEORGE H. AMONSEN, Minneapolis, Minn. Filed Jan. 19, 1920. Serial No. 352,307. 3 Claims. (Cl. 280—112.)

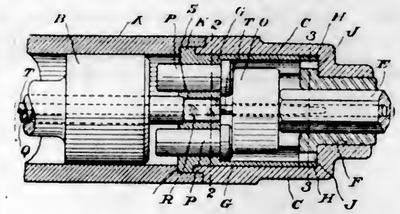
1. A front axle device comprising a normally-horizontal member, an eye-bolt extending upwardly from said member and passing through a hole in the front portion of the vehicle frame, cushioning means upon which the front of the vehicle frame rests, a member secured to the front of the vehicle frame and provided with a vertical slot, and a pivot bolt extending through said horizontal member, the lower end of said eye-bolt and said vertical slot.

1,375,440. GRENADE. MARCUS O. ANTHONY, New York, N. Y., assignor of one-half to A. Kimball Company, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1918. Serial No. 257,101. 18 Claims. (Cl. 102—29.)



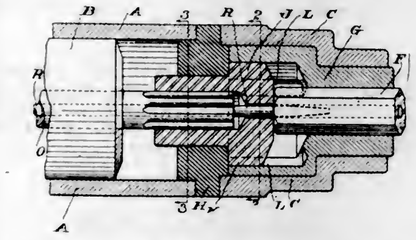
2. In a grenade, the combination with a grenade body, of a firing pin, a sleeve carried by the body and adapted to sustain a fuse and a detonator, a primer holder movably carried by the sleeve, and a spring-impelled hammer normally separated from the holder and adapted when released to drive said holder toward the firing pin.

1,375,441. PROCESS FOR THE EXTRACTION OF VALUES FROM HIGHLY-DILUTE SOLUTIONS. MARIE LOUIS EMILE BAUDIN, Besancon, France. Filed Apr. 7, 1917. Serial No. 160,568. 11 Claims. (Cl. 75—18.)



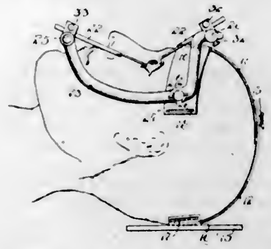
1. The process of extracting mineral compounds from highly diluted solutions thereof, which consists in producing a support having a colloidal absorbent coated on the surface thereof, and in bringing the highly diluted solution in contact with said adsorbent.

1,375,442. WOVEN POCKETED CARRIER. FRANK R. BATCHELDER, Worcester, Mass., assignor to Mills Belt Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 11, 1919. Serial No. 344,182. 2 Claims. (Cl. 224—23.)



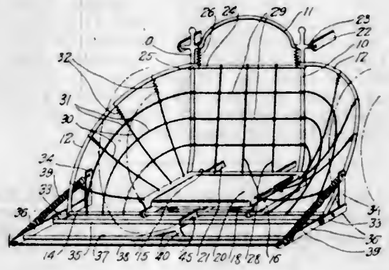
1. A pocketed carrier comprising a backing or belt-portion with a pocket thereon having its top at a distance below the upper edge or margin of said backing or belt-portion, said backing or belt-portion having a housing-slit formed therein and within the thickness of the backing or belt portion with its mouth-opening in the front face of the portion of backing or belt-portion which is exposed above the top of the pocket, and a cover-flap for the said pocket having its attaching end secured in the said housing-slit.

1,375,443. ROTATING CONSTRUCTION FOR PERCUSSIVE TOOLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,833. 3 Claims. (Cl. 121—7.)



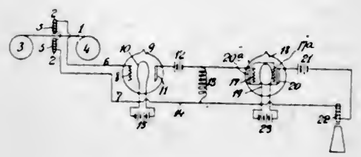
1. In a percussive tool, a cylinder, a piston reciprocating therein, a front head, a chuck in said front head adapted to receive the drill steel, an anvil block, a rotation sleeve engaging the said chuck, a rotary shaft passing through the piston and connected to rotate said rotation sleeve, and at least one tappet slidably mounted in said rotation sleeve and adapted to receive and transmit the impact blow of the piston.

1,375,444. ROTATING DEVICE FOR PERCUSSIVE TOOLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,835. 3 Claims. (Cl. 121—7.)



1. In a percussive tool, the combination of a cylinder casing, a piston reciprocating therein, an anvil block adapted to receive the impact of the piston, a chuck for receiving the drill steel, the chuck and anvil block having sliding but non-rotating engagement, and a rotating shaft passing through the piston and slidably but non-rotatably engaging the anvil block for imparting rotation to the drill steel.

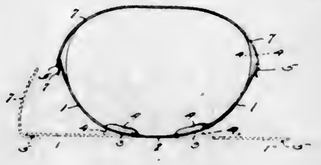
1,375,445. APPARATUS FOR USE IN SURGICAL OPERATIONS ON THE EYE. ELIJAH R. CROSSLEY, Chicago, Ill. Filed Apr. 2, 1917. Serial No. 159,122. 9 Claims. (Cl. 128—20.)



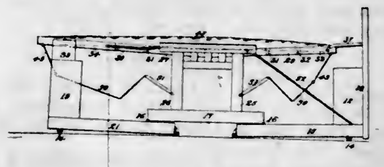
1. A device of the character described embodying adjustable means adapted to be secured to the head of the patient, said means embodying an element resting upon and extending across the forehead, spaced supports connected with the element and means mounted upon the support and adjustable across the space between the suports for retracting and holding the eyelid out of contact with the eyeball.

1,375,446. CAR-FENDER. HUGH DAVISON, New York, N. Y. Filed July 23, 1920. Serial No. 398,423. 4 Claims. (Cl. 293—40.)

1. A vehicle fender comprising a substantially convex frame, yielding interlaced elements secured to said frame, a spring supported receiving platform carried by the frame, a webbed backing at the rear of said platform, means for resiliently supporting said backing, a folding trip pivoted to the frame, a lever operated by said platform, a plate fixed to said trip, said plate having an opening at each side of the axis of said trip, a fork formed with said lever adapted to engage in the mentioned openings, and means for raising said fork upon depression of said platform.



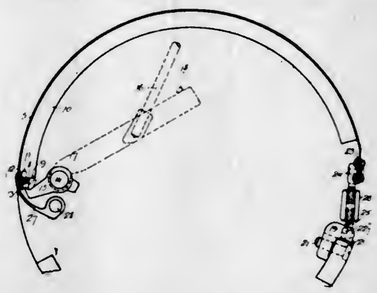
1,375,447. MEANS FOR AMPLIFYING CURRENTS. LEE DE FOREST, New York, N. Y., assignor, by mesne assignments, to De Forest Radio Telephone and Telegraph Company, a Corporation of Delaware. Filed June 24, 1913. Serial No. 775,529. 29 Claims. (Cl. 179—171.)



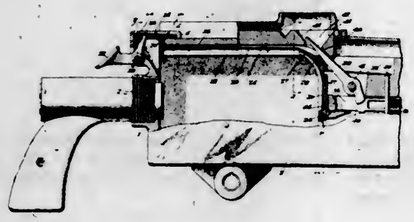
1. The combination with a source of weak undulatory current, of an electric circuit including a source of current, means to vary the conductivity of said circuit by and in accordance with said undulatory current, a reactance connected across said circuit, and an audion conductively connected with said circuit.

1,375,448. TRUSS. JAMES H. DOWNIE, San Antonio, Tex. Filed Sept. 10, 1919. Serial No. 322,889. 2 Claims. (Cl. 128—107.)

1. In a flat spring truss, the combination of an integral spring metal plate having spaced oval enlarged portions and having an upwardly arched connecting portion, and having upwardly arched end portions extending beyond the oval portions, said end portions being of sufficient length to project beyond the hips of the wearer when the truss is applied, flat rubber pad members cemented to the oval portions to form flat truss elements, and a waterproof band adjustably attached to the end portions of the spring metal plate to secure the device about the wearer.



1,375,449. COMBINATION TABLE AND BED. THOMAS B. DRAPER, Oakland, Calif. Filed Oct. 24, 1918. Serial No. 259,517. 20 Claims. (Cl. 5—17.)



1. An article of furniture having a top, legs, one of which is disposed beneath each of the corners of the top and to one set of which the top is fixed, cross-braces to which the legs are pivotally secured, an articulately constructed spring frame supported from and above said cross-braces directly beneath the table top and normally concealed by the table top and means whereby the legs may be swung outwardly and downwardly to completely expose the springs and to lower them to the height of an ordinary bed.

1,375,450. PRINTING-PRESS. FRED S. ENGLISH, New London, Conn. Filed June 30, 1919. Serial No. 307,789. 4 Claims. (Cl. 272.)

1. In a printing press the combination with the impression cylinder, of a jacket for the impression portion thereof, a strip secured to the leading end of the jacket, and adapted to lie inside the peripheral line of said cylinder, dowel pins at the forward edge of the impression portion of the cylinder adapted to enter said strip, clamps for holding said strip engaged with said dowel pins, and detachable means for securing the rear end of said jacket to the cylinder.

1,375,451. TRIGGER AND SEAR MECHANISM FOR MACHINE-GUNS. ELBERT FOWLER, U. S. Army. Filed Dec. 6, 1918. Serial No. 265,609. 4 Claims. (Cl. 89—27.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

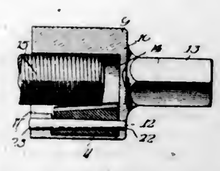
1. In a machine gun, a sear, a sear-actuating cam-member, comprising a plate bifurcated to form legs, the ends of which bear upon said sear, a trigger, and a connection between said cam-member and said trigger.

1,375,452. CAP FOR ARMOR-PIERCING PROJECTILES. ROBERT ABBOTT HADFIELD, Westminster, England. Filed May 22, 1920. Serial No. 383,605. 4 Claims. (Cl. 148—21.)

1. The herein described process of producing a steel cap having a stiffened or hardened front end portion for use with an armor piercing projectile, said treatment consisting in heating the cap to a high temperature, then cooling it, first rapidly and afterward more slowly to about the temperature of the atmosphere, reheating it to a high temperature but below that to which it was first heated, allowing it to partly cool, again reheating it but to a lower temperature than the first reheating, then suddenly cooling it, afterward heating its forward end or nose to a high temperature and then cooling the whole cap by completely immersing it point downward in a cooling liquid.

1,375,453. MANUFACTURE OF SHOVELS, SPADES, AND LIKE SHOVELING OR DIGGING DEVICES. ROBERT ABBOTT HADFIELD, Westminster, England. Filed May 25, 1920. Serial No. 384,209. 3 Claims. (Cl. 148—12.)

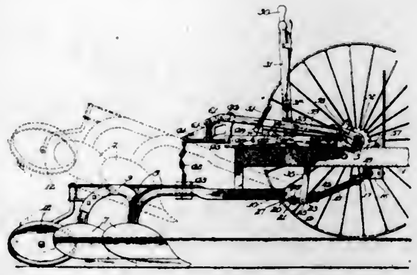
1. The manufacture of a manganese steel shovel having its handle socket in one piece with its blade, said manufacture consisting in reducing a plate of manganese steel into a sheet of the desired thickness by forging, annealing the resulting sheet, cutting the sheet to shape to form the desired shovel blade with shank for handle socket, bending the sheet to form the desired shovel blade with handle socket, heating the said blade and socket quickly to a high temperature and quenching it quickly in water.



1,375,454. ELECTRICAL-RESISTANCE ALLOY. FRANK F. HANSEN, Chicago, Ill., assignor to Hansen-Halliburton Mfg. Company, Chicago, Ill. Filed Sept. 19, 1919. Serial No. 324,983. 4 Claims. (Cl. 75—1.)

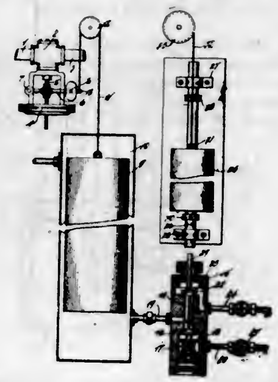
1. An electrical resistance alloy containing principally chromium and copper in approximately equal amounts and small amounts of tungsten and molybdenum, the combined amount of tungsten and molybdenum being less than 10% with the tungsten in excess of the molybdenum.

1,375,455. ALLOY FOR ELECTRICAL RESISTANCE. FRANK F. HANSEN, Chicago, Ill., assignor to Hansen-Halliburton Mfg. Company, Chicago, Ill. Filed Sept. 19, 1919. Serial No. 324,985. 4 Claims. (Cl. 75—1.)



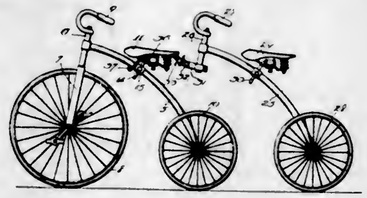
1. An electrical resistance alloy containing, chromium, tungsten and aluminum, the chromium being in preponderating amount compared with the combined amount of tungsten and aluminum, and the amount of tungsten being greater than the amount of aluminum.

1,375,456. CHUCK FOR STAYBOLTS. JOHN B. HASTY, San Bernardino, Calif., assignor to Tom Brown, Chicago, Ill. Filed July 26, 1915. Serial No. 41,818. 3 Claims. (Cl. 81—53.)



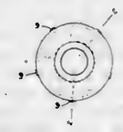
1. A chuck for stay-bolts and the like comprising a hollow head in which the end of a stay-bolt may be inserted, and a rocking clutching element inserted in said head and held in place by a pin extending through the head.

1,375,457. TRACTOR-PLOW. HENRY J. HEIDER, Carroll, Iowa, assignor to Rock Island Plow Company, Rock Island, Ill., a Corporation of Illinois. Original application filed July 27, 1917, Serial No. 183,114. Divided and this application filed July 29, 1918. Serial No. 247,310. 8 Claims. (Cl. 97—60.)



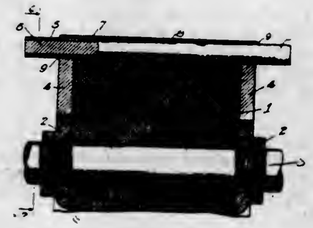
1. The combination of a wheel-supported vehicle, a draft frame pivotally supported thereby to swing vertically, a plow arranged to trail in the rear of the tractor and pivoted to said draft frame to swing vertically, means rigidly associating the plow with said draft frame for rotative movement upon a substantially longitudinal axis, lever controlled means for warping said draft frame to rotate the plow into proper working level, and lever controlled means for swinging the draft frame upon its pivot to regulate the working depth of the plow.

1,375,458. HEAT-REGULATING SYSTEM. BENJAMIN POST HERMES, New York, N. Y. Filed Apr. 28, 1920. Serial No. 377,256. 16 Claims. (Cl. 161—7.)



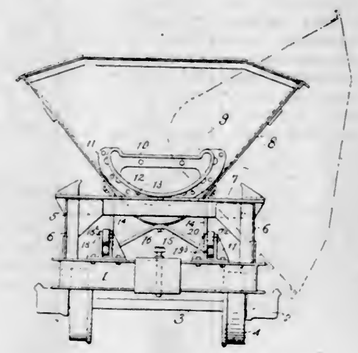
1. In a heat regulating system, in combination, time controlled means for turning on and cutting off a source of heat supply at independent and variable time intervals of such duration that the temperature of the space being heated is substantially constant.

1,375,459. VELOCIPEDE. EMIL C. HESSE, Chicago, Ill. Filed July 14, 1919. Serial No. 310,619. 1 Claim. (Cl. 208—109.)



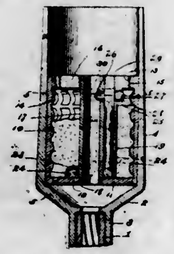
A velocipede having a main frame at whose forward end is a generally vertical tube having connection with a steering wheel by which the velocipede is in part supported, the frame being extended both rearwardly and downwardly and providing at its rear end a mounting for a pair of wheels, a seat carried on the frame, and a trailer for the velocipede and of construction generally similar thereto, comprising a main frame at whose forward end is a generally vertical tube, a device secured to said tube and extending forwardly thereof, and a loose connection between the forward end of said device and the frame of the vehicle adapted to afford support to the forward end of the trailer, the trailer frame being extended both rearwardly and downwardly and having its rear end supported by a pair of wheels, substantially as described.

1,375,460. ADJUSTABLE REAMER. WILLIAM B. JOHNSON, Elkhart, Ind., assignor to Foster-Johnson Reamer Company, a Corporation of Indiana. Filed Feb. 10, 1919. Serial No. 276,222. 4 Claims. (Cl. 77—76.)



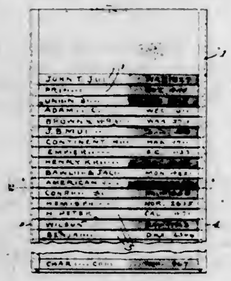
1. A metal cutting tool comprising, in combination, a body member or holder provided with a central bore; a plurality of radially movable blades mounted in said holder; a longitudinally movable plunger mounted in said holder bore and adapted to radially actuate said blades when longitudinally moved; and means for longitudinally actuating said plunger, said means comprising a revoluble adjustment nut sleeving said plunger, a complementary spiral connection between said nut and said plunger, a slotted abutment member carried by said holder, and an annular shouldered member carried by said nut and revolubly arranged within said abutment slot.

1,375,461. INDUCTION-MOTOR. AUSTIN KIMBLE, Wausau, Wis., assignor to Marathon Electric Mfg. Company, Wausau, Wis., a Corporation of Wisconsin. Filed May 12, 1919. Serial No. 296,649. 2 Claims. (Cl. 172—120.)



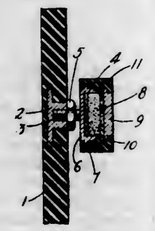
1. A squirrel cage winding comprising a pair of low impedance end rings, in combination with a peripheral series of compound bars connecting said rings, each bar including a core of high-reactance metal and a covering of low impedance metal.

1,375,462. LOCKING DEVICE FOR DUMPING-HOPPERS. JAMES LOCKHART, Lakewood, Ohio., assignor to The Lakewood Engineering Company, Lakewood, Ohio, a Corporation of Ohio. Filed May 26, 1919. Serial No. 299,739. 1 Claim. (Cl. 105—264.)



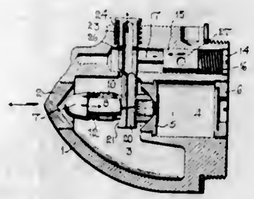
The combination with a frame, of a hopper, coöperating trunnion members upon the frame and hopper, a member carried by the hopper and provided with slanting sides, a pair of spaced pivoted members, said pivoted members engaging the said member carried by the hopper to lock the hopper in non-discharging position, movement of either of said pivoted members permitting the hopper to move to discharging position upon the opposite side of the frame with respect to the pivoted member, the other of said pivoted members retaining the hopper against movement in a direction opposite to that in which it is released for dumping.

1,375,463. RIFLE-GRENADE. JOHN V. MCADAM, U. S. Army. Filed Sept. 20, 1918. Serial No. 255,015. 11 Claims. (Cl. 102—29.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



5. In a rifle grenade, the combination with a discharger adapted to fit the muzzle of a rifle, a grenade constructed to fit said discharger and having a closed and open end, a removable closure fitting the open end, and a projectile guide and fuse holder carried by said removable closure.

1,375,464. VISIBLE INDEX. FRANK L. MACDONAGH, Chicago, Ill., assignor to Acme Card System Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 26, 1917. Serial No. 157,304. 1 Claim. (Cl. 40—64.)

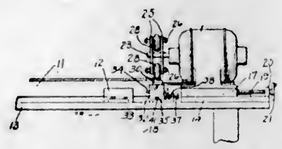


In visible indexes, the combination with a channel frame member, a plurality of transparent slip holders mounted therein, a slip detachably seated in each holder and extending substantially throughout the length thereof and a plurality of transparent different colored indicators detachably mounted on selected ones of said slip holders and extending across only a portion of the length of the latter.

1,375,465. DEVICE FOR CONVERTING SOUND OR OTHER VIBRATIONS INTO VARIATIONS IN AN ELECTRICAL CIRCUIT. CHARLES R. MOORE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 18, 1918. Serial No. 235,417. 4 Claims. (Cl. 179—122.)

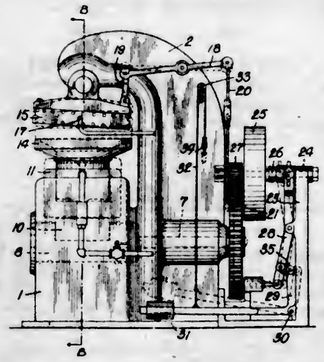
1. In a device of the inertia type for translating vibrations into impulses in an electrical circuit, a pair of electrodes, energy-absorbing material holding said electrodes in spaced relation, and means to reinforce internally said energy-absorbing material against flexure.

1,375,466. IMPACT-FUSE. EARL J. W. RAGSDALE, U. S. Army, assignor to Secretary of War, trustee for Government of United States of America. Filed July 30, 1918. Serial No. 247,381. 6 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



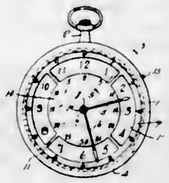
1. In a fuse for projectiles, the combination of a fuse body provided with an opening; firing mechanism in the body; combined holding and retarding means for retaining said mechanism in safe condition during acceleration; and means for ejecting said combined means through said opening.

1,375,467. MOUTHPIECE FOR CLARINETS. JOHN A. REDFIELD, Houston, Tex. Filed Aug. 21, 1920. Serial No. 405,142. 2 Claims. (Cl. 84—383.)



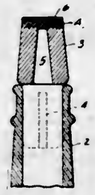
1. A clarinet mouthpiece having a cylindrical bore the upper base of the mouthpiece being a plane oblique to the axis of the bore which upper base serves as a table for the reed to rest upon.

1,375,468. METHOD AND APPARATUS FOR TREATING SELVAGE. MARK A. REPLOGLE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 12, 1919. Serial No. 310,347. 23 Claims. (Cl. 26—2.)



23. An apparatus for treating selvage comprising a motor having a shaft, an adjustable supporting base for said motor, adjustable means for supporting a strip of fabric adjacent said motor, a head carried by said motor shaft, said head including a plurality of spaced elements, and a plurality of members loosely supported by said elements, and means whereby the adjustment of said base may be effected to cause said members to intermittently strike the selvage of said fabric upon rotation of said shaft and head.

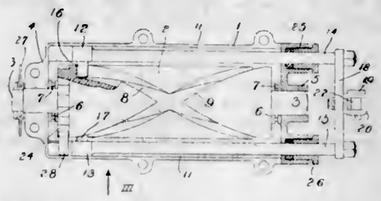
1,375,469. LEATHER-PRESS. ELIE RICHARD, Quebec, Quebec, Canada. Filed Oct. 23, 1919. Serial No. 332,721. 18 Claims. (Cl. 149—23.)



1. In a press, the combination of a base provided with a pair of superposed openings; a cylinder movable vertically in the upper opening; mechanism located in the lower opening for positively operating on the cylinder to bodily raise and lower it; a piston in said cylinder; means for effecting vertical movement of the piston independently of and relatively to the cylinder; a jaw secured to the piston to move therewith; and a jaw coöperative with the first jaw.

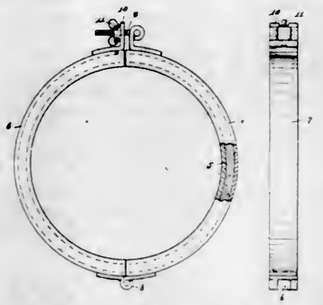
1,375,470. ADJUSTABLE WATCH-DIAL. HARRY L. SHAW, Lorain, Ohio. Filed Sept. 22, 1919. Serial No. 325,464. 2 Claims. (Cl. 58—128.)

1. In a watch, the combination of relatively movable superimposed dials, the movable dial carrying standard hour numerals, the stationary dial carrying two sets of minute numerals, said minute numerals reading from fixed points and consisting of inner and outer circles on the fixed dial, and webs connecting the inner minute circle with the outer minute circle.



1,375,471. BOTTLE-STOPPER. ARTHUR G. SHERMAN, Detroit, Mich. Filed Oct. 17, 1919. Serial No. 331,460. 4 Claims. (Cl. 215—45.)

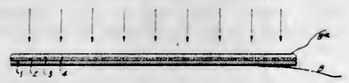
1. The combination with a bottle for receiving hypodermic solutions, said bottle having a neck portion, of a stopper inserted in said neck portion, formed of elastic material and having a central opening extending therethrough for a major portion of its length, and having integral therewith a portion of relatively soft elastic material subjected to compression through confinement in the bottle neck and normally closing said opening.



2. The combination with a bottle for receiving hypodermic solutions, said bottle having a cylindrical neck portion, of a normally frusto-conical bottle stopper inserted in said neck portion, with its larger end innermost, and compressed to cylindrical form by such insertion, the outer end of said stopper having a cap portion of softer elastic material, and an opening being extended centrally of the stopper from its inner end to said cap portion, said opening conforming to the frusto-conical shape of the stopper prior to insertion in the bottle.

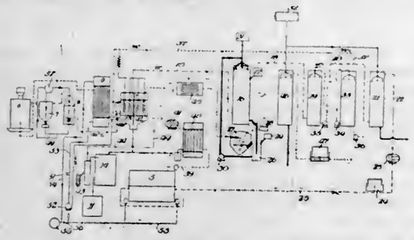
1,375,472. MECHANICAL STARTER FOR INTERNAL-COMBUSTION ENGINES. HERBERT JAMES SIMPSON, Norton-on-Tees, England. Filed July 31, 1920. Serial No. 400,564. 1 Claim. (Cl. 74—40.)

A manually operated starting apparatus for internal combustion engines, comprising, in combination, a cylindrical casing provided with a longitudinal slot, a thrust bearing at each end of said casing, a rotary drum journaled therein, a ratchet wheel at one end of said drum, an endless inclined groove formed in the surface of the drum proceeding from a point near one end of the drum and coinciding with one end of a cross-sectional diameter of the same along one side of the drum to a point near the other end of the latter coinciding with the opposite end of said diameter, returning along the opposite side of the drum to the first-mentioned point, a reciprocating member supported near one side of the casing and parallel to the axis of the drum, a projection upon said member engaging in the endless groove in the drum and working on said groove in the casing, a pawl within the casing adapted to engage the said ratchet to permit rotary movement in one direction only, manually operated means for reciprocating said member and means for transmitting the rotation of the drum to an engine shaft.



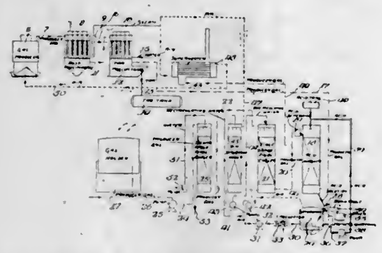
1,375,473. BELT-VULCANIZING MOLD. CLYDE L. SMITH and EMMETT S. WEBSTER, South Bend, Ind. Filed Oct. 15, 1919. Serial No. 330,932. 3 Claims. (Cl. 18—38.)

1. A vulcanizing mold for making endless belts comprising a mounting ring for assembling the belt material



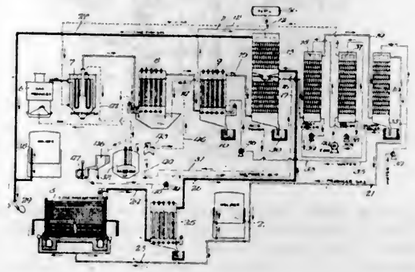
thereon, a sectional channeled ring adapted to encompass the mounting ring to form a circular chamber, and means for drawing said ring sections together to confine and compress the belt material within said chamber.

1,375,474. PHOTO-ELECTRIC APPARATUS. WALTER O. SNELLING, Allentown, Pa. Filed July 9, 1920. Serial No. 395,082. 7 Claims. (Cl. 219—63.)



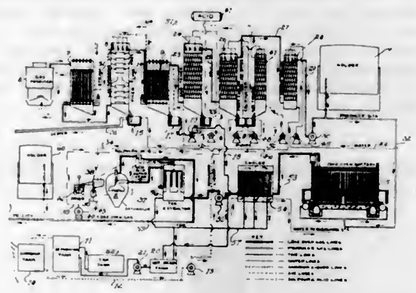
7. A photo-electric cell comprising a plate of metal in contact with a film of photo-electric material and a grid of wire in contact with a film of an aqueous electrolyte, the film of aqueous electrolyte and the film of photo-electric material having a surface of contact.

1,375,475. AMMONIA AND TAR RECOVERY PROCESS. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1919. Serial No. 318,868. 3 Claims. (Cl. 23—21.)



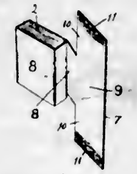
2. In a process for the recovery of tar and ammonia from producer gas, the combination of steps that consists in: concurrently cooling and precipitating the dust from the hot producer gas from the producer; further cooling and washing said producer gas with water; then precipitating the residue of the tar from such partially cooled but still hot gas; and then passing said gas through an acid wash to absorb the ammonia, substantially as specified.

1,375,476. AMMONIA AND TAR RECOVERY PROCESS. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1919. Serial No. 318,890. 9 Claims. (Cl. 23—21.)



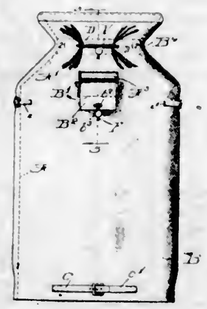
7. In a process for the production of tar and ammonia from producer-gas, the combination of steps that consists in: effecting a heat exchange between the hot gas from the producer and water to cool the gas and generate steam; removing the tar and ammonia from the cooled gas; mixing such steam with the air going to the producer, to augment the production of ammonia in the producer; firing tar and ammonia freed producer-gas and utilizing the heat generated thereby for superheating the steam charged air; substantially as specified.

1,375,477. AMMONIA AND TAR RECOVERY PROCESS. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 25, 1919. Serial No. 319,733. 17 Claims. (Cl. 23—21.)



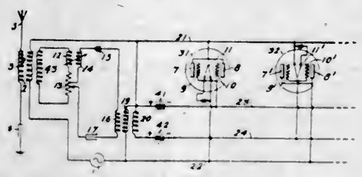
17. In a process for the recovery of ammonia from producer-gas, the combination of steps that consists in: passing tar-freed producer-gas, at about its saturation-temperature, through an acid-wash to absorb the ammonia from the gas and concurrently precipitating water from such gas; conveying the dilute mother-liquor from such acid-wash to a saturation-bath; passing super-heated air through said saturation-bath to effect deposition of ammonium sulfate, and saturate said air with substantially the full water content required for the production of said producer-gas; and then conveying said air to the producer; substantially as specified.

1,375,478. AMMONIA AND TAR RECOVERY PROCESS. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 25, 1919. Serial No. 319,734. 14 Claims. (Cl. 23—21.)



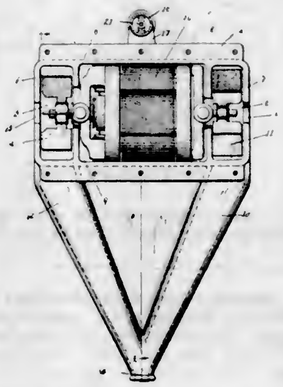
13. In a process for the recovery of tar and ammonia from producer-gas, the combination of steps that consists in: passing dust-freed gas, at a temperature substantially above its saturation-point, through an ammonia-liquor condensate to effect distillation of the ammonia from such ammonia-liquor; then passing the commingled gas and still-vapors through an electrical precipitator to precipitate the tar residue from the gas and the water from the still-vapors; then passing the commingled gas and still-vapors through an acid-wash to absorb both the ammonia of the gas and the ammonia of distillation; substantially as specified.

1,375,479. PACKAGE FOR DENTAL SOLDER AND THE LIKE. GEORGE L. VAN ALLEN, Prince Bay, N. Y., assignor to Baker & Company, Inc., a Corporation of New Jersey. Filed Sept. 21, 1918. Serial No. 255,069. 3 Claims. (Cl. 229—87.5.)



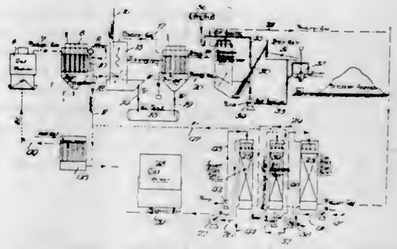
1. The combination with an envelop divided transversely into separable sections and adapted to fold on the lines of division, of a wrapper having a portion secured to one end edge of said envelop in alinement therewith and another portion transverse to said first-mentioned portion at a sufficient distance from the envelop so that the part of said alined portion intermediate the envelop and transverse portion may first wrap around the folded envelop in one direction and then the said transverse portion wrap around the whole in the other direction.

1,375,480. CAN-JACKET. WALTER A. WEST, Elkhorn, Wis. Filed Oct. 6, 1917. Serial No. 195,006. 2 Claims. (Cl. 150—52.)



1. A can jacket adapted to be passed over the can from the top and retain the cover upon the can while the jacket is in place, the jacket having apertures through which laterally-projecting handles of the can may extend, and flaps secured to the jacket above the apertures, adapted to extend through the can handles and overhang the lower margin of the apertures, and means for releasably and sealably securing the flaps to the jacket body at the opposite side of the handle from that at which the flaps are secured to the body of the jacket.

1,375,481. POWER-MODULATOR FOR RADIOTRANSMISSION. HAROLD D. ARNOLD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Continuation of application Serial No. 46,842, filed Aug. 23, 1915. This application filed Nov. 4, 1916. Serial No. 129,470. 13 Claims. (Cl. 250—6.)

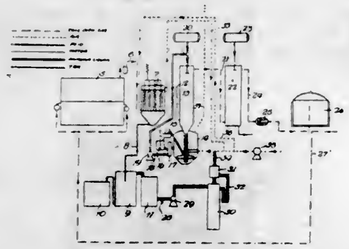


1. The method of transmission which consists in variably impeding a pulsating electron stream in accordance with modulated radio frequency waves to produce a modulated current and transmitting the electrical energy of said current to a distant station.

1,372,482. BLOWER. EDWARD C. H. BARTLETT, Cleveland, Ohio. Filed June 12, 1919. Serial No. 303,582. 2 Claims. (Cl. 230—11.)

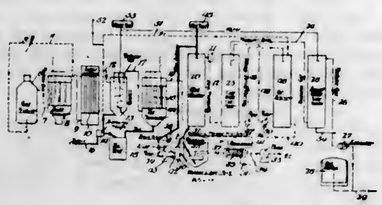
1. A blower casing comprising upper and lower sections with two closed transverse partitions across the same, forming a fan chamber at each end of the casing and an intermediate motor chamber, the partitions having bearings for the motor shaft, the lower section having an outlet from each fan chamber.

1,375,483. AMMONIA AND TAR RECOVERY PROCESS. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1919. Serial No. 318,908. 22 Claims. (Cl. 23—21.)



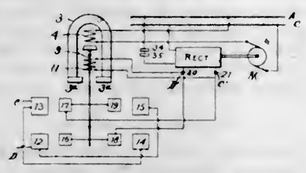
22. The process for the recovery of tar and ammonia from producer-gas, which consists in: subjecting such gas to a cooling operation, precipitating the dust from the gas, precipitating the tar from the gas, and then directly effecting the precipitation of ammonium sulfate, by passing such gas through an acid wash, the ammonia being absorbed from the gas by the acid-solution and the gas acting as the carrier for the evaporation from the acid-solution through which the gas passes; substantially as specified.

1,375,484. AMMONIA AND TAR RECOVERY PROCESS. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 22, 1919. Serial No. 319,254. 13 Claims. (Cl. 23—21.)



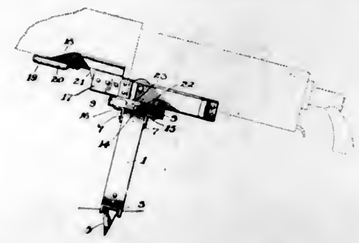
1. In a process for the recovery of tar and ammonia from coke-oven gas, the combination of steps that consists in: concurrently extracting the tar from the coke-oven gas, and cooling the gas by passing it in counter-current with air; passing such cooled gas through an acid-wash to absorb the ammonia of the gas; discharging the

mother-liquor from such acid-wash into a saturation-bath; and passing the heated air from the tar-extraction opera-



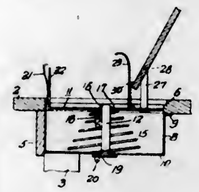
tion through said saturation-bath, to effect deposition of the ammonium sulfate; substantially as specified.

1,375,485. AMMONIA AND TAR RECOVERY PROCESS. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 25, 1919. Serial No. 319,811. 13 Claims. (Cl. 23—21.)



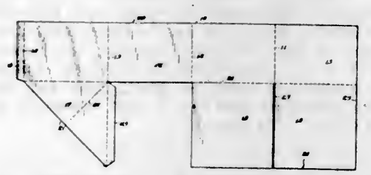
13. In a process for the recovery of tar and ammonia from producer-gas, the combination of steps that consists in: passing tar-freed producer-gas, at about its saturation-temperature, through an acid-wash to absorb the ammonia from the gas; conveying the mother-liquor from such acid-wash to a saturation-bath; passing super-heated air through said saturation-bath to effect deposition of ammonium sulfate; reheating the air from said saturation-bath; and conveying such air to the producer; substantially as described.

1,375,486. ELECTRICAL SYSTEM AND CONTROL THEREFOR. ARTHUR R. BULLOCK, Lakewood, Ohio. Filed Aug. 2, 1917. Serial No. 184,018. 20 Claims. (Cl. 175—364.)



14. In an electrical system, an energizing A C circuit, a rectifying device connected with said A C circuit, an electro-magnetic device connected with the A C circuit, a switching device said switching device being included in a circuit connected to the rectifier said switching device being controlled by the operation of the electro-magnetic device first mentioned.

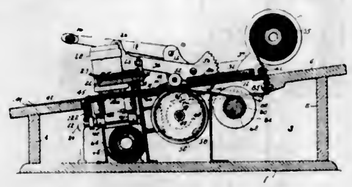
1,375,487. BIPOD. JOHN S. BUTLER and SAMUEL G. GREEN, U. S. Army. Filed Jan. 17, 1919. Serial No. 271,728. 13 Claims. (Cl. 42—94.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A bipod including a removable turret mounted for traverse, and a resiliently-supported member in the path of movement of said turret for limiting traverse and preventing accidental removal of the turret.

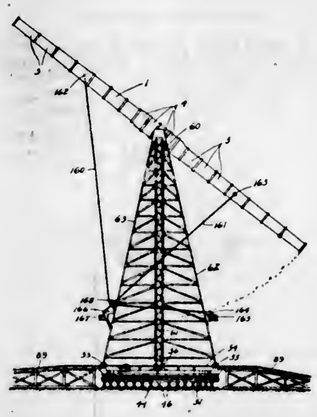
1,375,488. TABLE. PETER W. CHMIELOWSKI, Chicago, Ill. Filed Nov. 13, 1920. Serial No. 423,871. 8 Claims. (Cl. 45—31.)

1. The combination with a table having a flat top with an opening within the margin thereof, of a flat board to fit in and close said opening, said board having a game surface on one side and a plain surface finished like the table top on the other side, depressible means for supporting said board and raising the same above the table top, latch mechanism for holding the board depressed flush with said top means on the table for operating said latch mechanism for releasing said board, and means detachably connecting said board with said depressible means in a manner permitting said board to be reversed.



1,375,489. FOLDING BOX. JOHN N. DAVIS, Three Rivers, Mich., assignor to O. B. Andrews Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed Feb. 4, 1920. Serial No. 356,312. 1 Claim. (Cl. 229—16.)

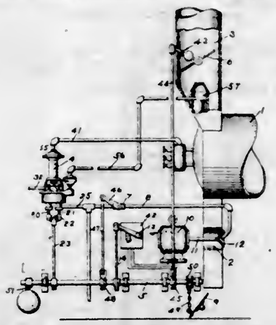
A one-piece blank for forming a folding box including a relatively long strip scored to form four side sections and a securing flap at one end, one side edge of said strip provided with three extensions separated from each other by spaces at least as wide as two thicknesses of the blank and scored at the joint to permit ready bending, two of said extensions being of rectangular form and forming continuations respectively of two of the side sections at one end of the strip and adapted to form



respectively an intermediate bottom and a top bottom section of the completed box, the other extension being of right triangular shape with one side edge joined to the side section at the end of the strip opposite to the end provided with intermediate and top bottom sections, said triangle shaped extension having its hypotenuse facing away from the other extensions and said triangular shaped extension constituting the lower bottom section of the completed box and said lower bottom section provided with a securing flap on that edge thereof which extends perpendicularly from the length of the strip and facing the other extensions.

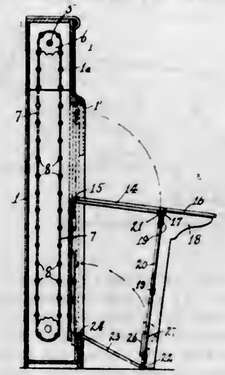
1,375,490. CASH-RECORDING DEVICE. WILLIAM L. DEMING, Salem, Ohio. Filed Dec. 23, 1918. Serial No. 268,029. 30 Claims. (Cl. 281—8.)

1. In a recording device, the combination of means for receiving a record strip, a support therefor exposing a portion of the strip to receive a notation, means for advancing the strip, strip severing mechanism including a spring as actuating means therefor, and a device controlling the actuation of the severing mechanism consequent on the movement of the advancing mechanism.



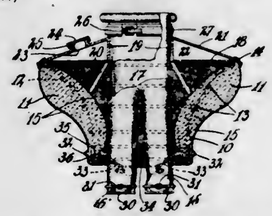
1,375,491. HEAVY ARTILLERY. KENNEDY DOUGAN, Minneapolis, Minn. Filed Apr. 26, 1915. Serial No. 23,869. 20 Claims. (Cl. 89—37.)

1. A gun comprising a gun mount and a barrel, said barrel being formed of a plurality of transverse sections, means for successively securing said sections together to erect the gun, and means including said gun mount, for supporting the assembled sections while erecting the gun.



1,375,492. LIQUID-FUEL-CONTROL SYSTEM. SIDNEY G. DOWN, Berkeley, Calif., assignor to Associated Engineering and Supply Company, San Francisco, Calif., a Corporation of California. Filed July 5, 1919. Serial No. 308,886. 2 Claims. (Cl. 158—45.5.)

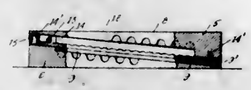
1. The combination with a steam boiler and furnace, of an electric motor, means operated by said motor for atomizing liquid fuel, a valve for regulating the supply of liquid fuel to said means, a rheostat for regulating the



speed of the motor, a shaft operatively connected to said valve and rheostat, and means governed according to the pressure of steam in the boiler for operating said shaft.

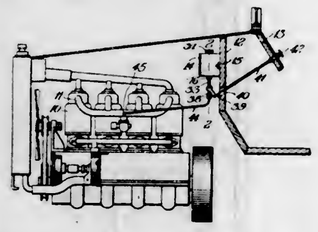
1,375,493. SELECTIVE ROLLER FILING-CABINET. WILLIAM F. DREW, San Francisco, Calif. Filed Sept. 10, 1918. Serial No. 253,351. 1 Claim. (Cl. 211—16.)

A filing cabinet for the described purposes, comprising a case having an exposure opening in its front; a door to control said opening and adapted when dropped to serve as a table in front of said opening; an extension leaf hinged to the outer edge of said door; legs hinged to the door; struts hinged to the case and to the legs; side-swinging brackets hinged to the legs for supporting the extension leaf; and an endless movable series of sheet-carrying rollers, adapted to be selectively brought into position behind the exposure opening, whereby the sheet may be drawn out from any given roller through the opening and lie on the dropped door for inspection.



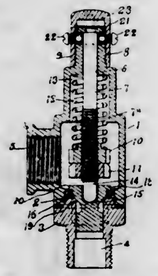
1,375,494. LIFE-BUOY. ANDREW DUDAS, Homestead, Pa. Filed Feb. 7, 1921. Serial No. 442,929. 6 Claims. (Cl. 9—20.)

1. A life-buoy comprising an inverted-bell-shaped annular float, a garment comprising legs and a waist portion



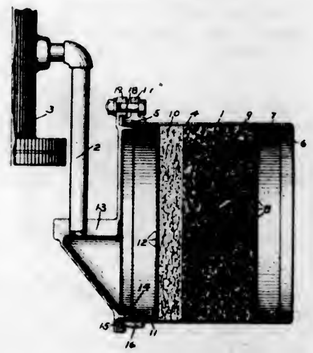
surrounded and carried by said float, and bracing means extending between the upper part of the float and the said waist portion.

1,375,495. PRINTER'S QUOIN. GEORGE DUNCANSON, Jr., Jersey City, N. J. Filed Apr. 27, 1920. Serial No. 377,056. 2 Claims. (Cl. 254—42.)



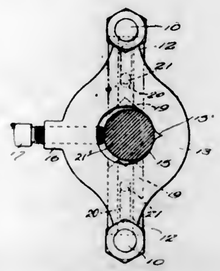
1. A printer's quoin comprising two members having angular faces in sliding contact with each other, a pair of spaced lugs formed on one of the members, a spaced bar carried by the other of said members and adapted to travel between the spaced lugs to form guiding means, and a transversely-extending pin overlying the spaced bar whereby relative movement of the members is prevented.

1,375,496. PRIMER AND HUMIDIFIER FOR INTERNAL-COMBUSTION ENGINES. CHESTER C. ECKHARDT, Rochester, N. Y. Filed Apr. 25, 1919. Serial No. 292,705. 5 Claims. (Cl. 123—180.)



1. An attachment for internal combustion engines comprising a container, an air inlet communicating therewith adjacent its bottom and means for closing the latter, a conduit communicating at one end with the intake of the engine and extending at its other end through said container and communicating with the latter adjacent its top, and means for opening and closing communication between said conduit and the bottom portion of said container.

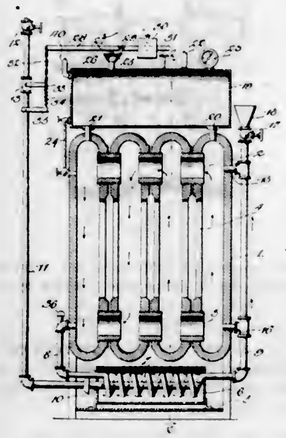
1,375,497. VALVE. ELMER H. EICKMAN, Dayton, Ohio, assignor to Buckeye Iron and Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 2, 1919. Serial No. 320,994. 4 Claims. (Cl. 251—3.)



1. In a valve, the combination, with a valve housing having an inlet and an outlet port respectively, a detached valve head coöperating with the inlet port, a spring actuated valve stem acting normally to hold the valve head in closed position relative to said port, and projecting exteriorly of the housing, and a valve actuating cap completely inclosing the projecting end of the stem and forming a fluid-tight joint with the housing.

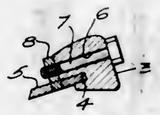
1,375,498. SUCTION AIR-STRAINER. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 4, 1919. Serial No. 321,622. 2 Claims. (Cl. 183—45.)

1. An air strainer comprising a casing having an inwardly folded flange at one end forming a recess, a cup shaped member mounted in said recess, an outwardly turned flange at the opposite end of the casing, a bracket, and a ring engaging the outwardly turned flange to clamp the casing to the bracket.



1,375,499. LATHE-DOG. CHET C. FESSENDEN, Derby, Conn. Filed Apr. 29, 1919. Serial No. 293,515. 1 Claim. (Cl. 82—41.)

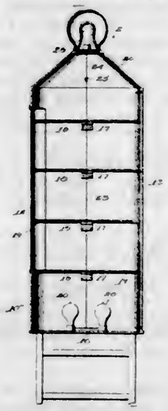
A lathe dog having a central opening therethrough and an offset at one side of the opening to provide clamp shoulders, a set screw operating through the body and into the opening and diametrically opposite to the offset, clamp blocks movably engaging the body with object engaging teeth at their contiguous ends, and coacting with the shoulders and set screw.



1,375,500. RADIATOR. ROSE FEVOLA and ANTONIO FEVOLA, Brooklyn, N. Y. Filed Sept. 25, 1920. Serial No. 412,751. 3 Claims. (Cl. 237—7.)

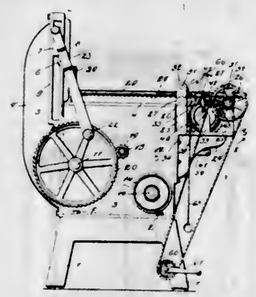
1. In a device of the class described, the combination of a plurality of radiator sections connected at their tops and bottoms for permitting free circulation, a water heating coil connected to said sections, a burner associated with said coil, a steam drum mounted on said radi-

ator sections and communicating therewith, and automatic means connected with said drum and adapted to control the flow of fuel to said burner.



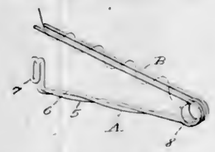
1,375,501. KNIFE. PHILIP GANZHORN, Chicago, Ill. Filed May 22, 1918. Serial No. 236,069. 1 Claim. (Cl. 17—20.)

In a knife of the character described, the combination with a substantially rectangular supporting arm having a longitudinal slot in one side face and a transversely disposed centrally located perforation above said slot at right angles thereto; of a reversible blade with longitudinal cutting edges beveled in reverse directions, either edge being adapted to be positioned in said slot, said blade having a central perforation therein, a bolt extending through the perforation of said supporting arm, one end of said bolt projecting out over said blade above the perforation therein, a blade retaining nut threaded on said projecting end of the bolt, and a peripheral radial stem on said nut to be received in the perforation of said blade, the inner end of said slot serving to limit the inward travel of the blade.



1,375,502. POPCORN HOLDER AND DISPLAY CABINET. FRANK R. GIDDINGS, Kalamazoo, Mich., assignor of one-half to Allan M. Giddings, Battle Creek, Mich. Filed Mar. 29, 1920. Serial No. 369,615. 5 Claims. (Cl. 34—21.)

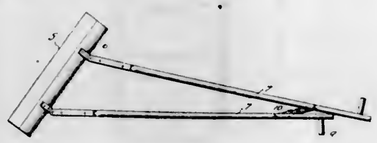
1. A vertical cylindrical pop-corn tank having a window at one side, a hinged door opposite the window, vertical series of diametrically opposed brackets within the tank between its window and its door, circular shelves of foraminous material loosely disposed upon the said brackets, and lighting means within the tank and disposed in the lower portion thereof whereby the heat generated by this



lighting means will circulate through the several shelves and the material supported thereby.

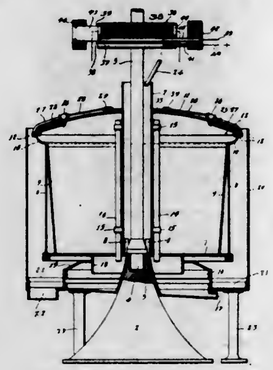
1,375,503. LYE-CRUSHING MACHINE. JOHN R. GILDA, St. Louis, Mo., assignor of one-half to Wm. Schield, St. Louis, Mo. Filed Nov. 1, 1918. Serial No. 260,652. 12 Claims. (Cl. 146—7.)

1. A material crushing machine comprising, in combination, a table, a reciprocatory cutting-blade, a ram for feeding material along the table to the blade, and mechanism for synchronously reciprocating the blade and effecting a progressive step-by-step movement of the ram, said mechanism including a rack-bar fixed to the ram, a driving gear meshing with the rack-bar, a pawl and ratchet having driving connection with the gear, pitmen pivotally connected to the cutting-blade, a rotary shaft, and operating connections between the shaft and both the pawl and pitmen.



1,375,504. HAIR-CRIMPER. MYRTIE GRABLE, Nahcotta, Wash. Filed Oct. 27, 1919. Serial No. 333,589. 1 Claim. (Cl. 132—41.)

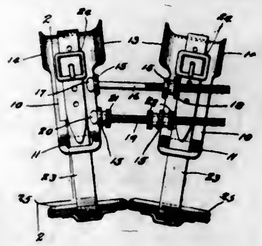
In a hair crimper of the class described, comprising a frame formed of a single length of wire bent to provide



an intermediate twisted portion of the frame and opposed hook and coiled extremities thereto, and parallel spaced extensions of equal length projecting from the coils and formed by the ends of the wire to provide double prongs for detachable engagement in the hooked extremity and extending beyond the same, said prongs being disposed at the outer sides of the coils whereby the hair will be crimped when said prongs are retained by the hook.

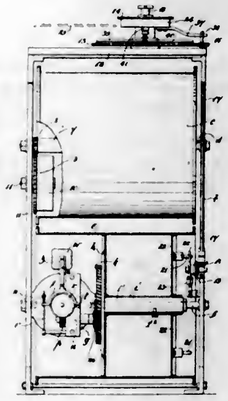
1,375,505. STREET-CLEANING DEVICE. FRANK M. GRADY, Butte, Mont. Filed Jan. 4, 1921. Serial No. 434,935. 3 Claims. (Cl. 294—54.)

2. A cleaning device, including a cleaning element, a pair of handles each having one of its ends hingedly secured to said cleaning elements, and a link extending between said handles, and having its ends pivotally secured one to each of the same.



1,375,506. CENTRIFUGAL SEPARATOR. EDWIN D. GRAY, Richmond, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a Corporation of California. Filed Sept. 2, 1920. Serial No. 407,792. 5 Claims. (Cl. 233—19.)

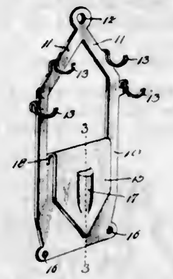
5. A centrifugal separator having a bowl provided with a peripheral pocket at its top and with a top forming a closed chamber, an axial inlet pipe communicating into said chamber, near the bottom thereof, a substantially axially outlet pipe leading from said chamber, from a point above the level of said pocket, the top of said bowl provided with an outlet near its outer edge, and an outlet chamber forming casing outside said bowl into w. ich said last named outlet communicates.



1,375,507. PATELLA-SPLINT. WILLIAM GRUNDMANN, St. Louis, Mo. Filed May 31, 1919. Serial No. 300,874. 2 Claims. (Cl. 128—83.)

1. A patella splint comprising a pair of strips of resilient material which are curved lengthwise and adapted to fit over the limb immediately above and below the knee joint, both edges of the central portion of each strip being curved upwardly, a flexible member associated with each strip and adapted to pass beneath the limb for retaining the strip in position for use, rods connecting the end portions of said strips, adjustable means on said rods for retaining said strips in spaced relationship, and ad-

justable means connecting said strips for determining the angular positions of said strips with respect to each other.



1,375,508. ADVERTISING AND OTHER DEVICE. HENRY KINGSFORD HARRIS, Westminster, London, England. Filed Aug. 14, 1917. Serial No. 186,207. 16 Claims. (Cl. 40—53.)

1. In an advertising device, a movable element adapted to be brought into any one of a series of positions, means for operating the same, and a setting and direction determining mechanism, said mechanism including a movable selector member adapted to be moved away from a fixed stop to determine the position to be taken by the movable element, a movable counter member displaceable with respect to the selector member and movable in unison with the said element, set in position by the selector member, means for throwing the operating means out of action when the element comes in position, and means for reversing the direction of movement of said element, whereby the element is moved in one direction when the selector member moves the greater distance and in the other direction when it moves a less distance.

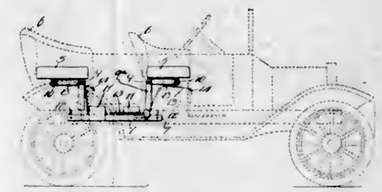
1,375,509. ENVELOP-GRIP AND PEN OR PENCIL RACK. WILLIAM C. HEATLIE, Beverly, Mass. Filed July 20, 1920. Serial No. 397,757. 2 Claims. (Cl. 120—1.)

1. A letter grip body formed from a blank consisting of a single piece of metal having substantially elongated pentagonal form, two of the sides being perpendicular to the base and the remaining two sides converging upwardly therefrom, said blank being cut along lines parallel to the upper part of the perpendicular sides and to the converging sides to form a tab, said body being formed from the blank by pressing a cam groove into the tab

and then bending the tab outwardly at its attachment to the remainder of the body and then downward in spaced relation thereto whereby a ball may be held between the tab and the lower part of the body in said cam groove to constitute the movable part of the letter grip.

1,375,510. PROCESS OF MAKING PUNCTURE-CLOSING COMPOSITION. CHARLES O. HOPPING, Long Beach, Calif. Filed Nov. 22, 1919. Serial No. 339,947. 4 Claims. (Cl. 134—17.5.)

1. The process of making a puncture-closing composition which includes boiling a vegetable fiber pulp in water, and adding a mucilaginous substance to the pulp and water mixture while the mixture is hot.

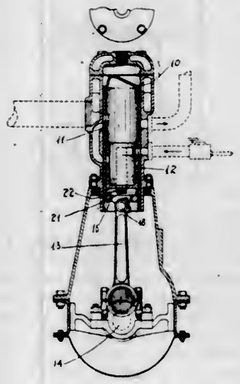


1,375,511. COMBINED HAT PROTECTOR AND ENVELOP. FRANK W. HOWARD, New York, and GEORGE B. CANNON, Jr., Brooklyn, N. Y. Filed Nov. 3, 1919. Serial No. 335,330. 4 Claims. (Cl. 2—108.)

1. A combined hat protector and covering for a raincoat consisting of an envelop having two opposite elongated side walls connected together along a folding edge and connected together adjacent their ends so as to permit the side walls to swing apart and assume a position forming a dihedral angle to each other at said edge, thereby enabling the envelop to cover one's hat, said side walls operating to fold together to cover a folded raincoat, and cords attached to the envelop for securing the same about the folded raincoat, and having means for attaching the same to opposite sides of the envelop, for securing the envelop in its open condition over one's hat.

1,375,512. SHOCK-ABSORBING MEANS FOR VEHICLES. HARRY HOWE, Stoughton, Wis. Filed Oct. 7, 1918. Serial No. 257,149. 8 Claims. (Cl. 155—9.)

1. The combination with an automobile having a movable seat, of a lever-like device fulcrumed between its ends on the automobile and adapted to support said seat at one side of its fulcrum, said device being counter-

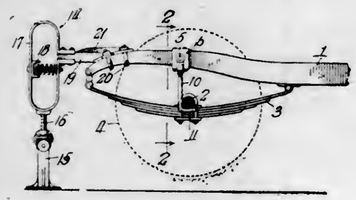


weighted at the other side of its fulcrum to counterbalance the weight of said seat and the occupant thereof.

1,375,513. REAGENT FOR LIQUID-BATTERY CELLS. DAVID L. HUMPHREY and CARL L. PITTMAN, Avoca, Tex. Filed Apr. 24, 1917. Serial No. 164,222. 1 Claim. (Cl. 23—13.)

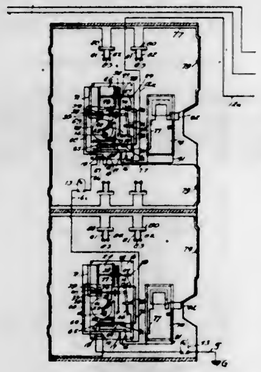
As a new article of manufacture, blue stone for electric battery cells which consists of copper sulfate containing iron and mixed with uncrystallized earthy, calcareous residues and granules of brownish and greenish color, such product being largely, but not entirely soluble in water.

1,375,514. ENGINE. WILLIAM J. HUNTER, Denver, Colo., assignor to The Hunter Gas Engine and Development Company, a Corporation of Colorado. Filed Jan. 22, 1919. Serial No. 272,602. 1 Claim. (Cl. 123—65.)



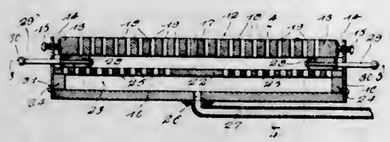
In an internal combustion engine having a cup piston, the interior walls of said cup being adapted for relative reciprocative movement with an interior member, means for preventing the rotation of said cup piston, and a screw cap for said cup having spaced depending ears adapted to mount a removable pitman.

1,375,515. JACKING ATTACHMENT FOR MOTOR-VEHICLES. JOSEPH H. IGO, Chicago Heights, Ill. Filed Apr. 26, 1920. Serial No. 376,502. 8 Claims. (Cl. 280—150.)



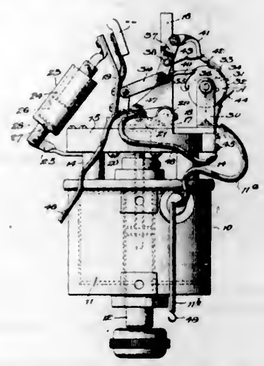
7. The combination with the frame of a vehicle and the rear axle beneath the same and a spring yieldably connecting the frame and axle together, of a coupling attachment comprising a clip adapted to be clamped to the frame above the axle and having a pin projecting laterally therefrom, a rod provided with an eye at its upper end to engage said pin and a hook at its lower end to engage said axle beneath the same to couple the frame and axle together to enable the axle to be lifted with the

frame, and a vertically arranged member beyond the rear end of the frame and rigidly secured thereto and ex-



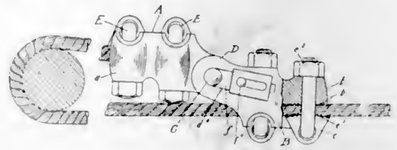
tending downward below the frame to a point enabling a lifting jack to be placed under and engage the same for lifting the frame and axle together.

1,375,516. ELECTRIC-ALARM SYSTEM. CHRISTIAN JOHN JENNE, San Francisco, Calif. Filed Nov. 2, 1916. Serial No. 129,122. 9 Claims. (Cl. 177—314.)



7. An electric signal system comprising a central receiving and testing station, an electric circuit extending therefrom, a house circuit, a magnet in parallel with the house circuit and both the latter circuits forming a part of the circuit extending to the central station, signal sending means, means whereby the magnet starts the operation of the signal sending means upon changes in the house circuit, means to thereupon cut the magnet out of the circuit and manual means to insert a balancing resistance to leave the line at the original total resistance.

1,375,517. SUCTION-BOX FOR PAPER-MAKING MACHINES. GEORGE SHEPHERD JOHNSON, Brainerd, Minn. Filed Apr. 19, 1920. Serial No. 375,049. 9 Claims. (Cl. 92—51.)



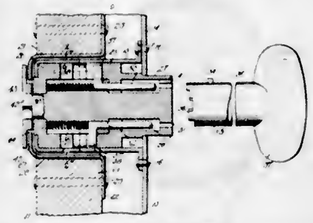
1. A suction box comprising a housing open at its upper end, a head closing the upper end of the housing and provided with transversely extending slots converging toward the center of the housing, a suction pipe entering the bottom of the housing at approximately the center thereof, a baffle plate in the housing intermediate its height and having its end portions perforated and its central portion above the suction pipe unperforated, and head blocks slidably mounted in the end portions of the housing between the baffle plate and the head of the housing for closing the openings in the end portions of the plate and housing.

1,375,518. CIRCUIT-RESTORING RELAY. CHARLES W. KAUTZ, Jr., Lancaster, Pa. Filed Jan. 27, 1919. Serial No. 273,346. 14 Claims. (Cl. 175—294.)

1. A circuit restoring device having switch contacts, a coil adapted when energized to close the contacts, and means in series with the coil and actuated by one of the contacts for permitting a predetermined number of actuations of the device.

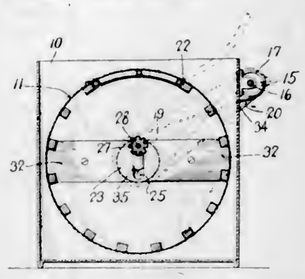
1,375,519. CABLE-COUPLING. EDWARD O. KEATOR, Dayton, Ohio. Filed Aug. 11, 1919. Serial No. 316,800. 4 Claims. (Cl. 24—123.)

2. A cable-coupling comprising two clamps and a coupling, the coupling consisting of transversely slotted arms projecting from the clamps, a pin adapted to seat in the slots and a catch adapted to engage the pin.



1,375,520. HOLDER FOR ADHESIVE BINDERS. LEE KINGSLEY, Syracuse, N. Y. Filed Dec. 29, 1919. Serial No. 348,103. 3 Claims. (Cl. 211—29.)

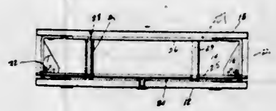
1. In a device of the character and for the purpose described, the combination with a receptacle having one end



open, of a retaining member slidably supported within said receptacle and comprising a bottom portion, two oppositely positioned side members extending at substantially right angles from said bottom portion, and abutments formed on the inner faces of said side members adjacent their free ends and the open end of the receptacle.

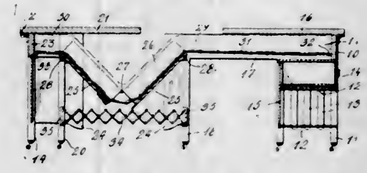
1,375,521. LOCK. ANTHONY LASKY, Bridgeport, Conn. Filed Sept. 28, 1920. Serial No. 413,304. 5 Claims. (Cl. 70—115.)

1. In a lock, a lock casing, spaced members secured in the casing and provided at their spaced opposing faces with alined recesses, a spindle mounted to turn in the casing members, and having at its inner end a locking member, and a plurality of spring pressed and sliding tumblers mounted in the spindle, the said tumblers having angular members adapted to engage either of the recesses of the members to prevent turning of the spindle and to enter the space between the said members to permit turning of said spindle.



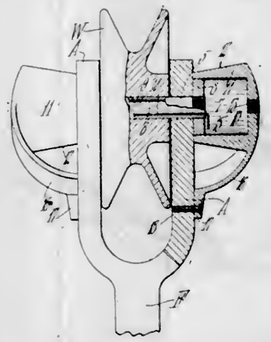
1,375,522. WASHING-MACHINE. FRANK LOMBARDI, New York, N. Y. Filed May 23, 1919. Serial No. 299,088. 1 Claim. (Cl. 68—18.)

The combination with a tank and a foraminous receptacle arranged within the tank for rotation, of an agitator disposed within the receptacle and including a shaft, hollow bushings secured to the ends of the receptacle and journaled in bearings in the adjacent walls of the tank, transverse reinforcing strips secured to the end walls of the receptacle, each strip being provided with a circular recess, a disk rotatably fitted in each recess and having a pocket formed in one face thereof, stub shafts projecting from said disks and journaled in said bushings, apertured lugs projecting from the ends of said agitator shaft and slidably fitted in the pockets of said disks, coiled springs arranged in said pockets to yieldingly support said shaft, a pin passed through said lugs and springs and secured to said disks, a plate covering said pockets of the disks and secured to the latter, and means for rotating said agitator in a direction reverse to the direction of said receptacle.



1,375,523. LOOSE-LEAF FILE. CHARLES F. MCBEE, Athens, Ohio, assignor to The McBee Binder Co., a Corporation of Ohio. Filed Sept. 25, 1919. Serial No. 326,119. 3 Claims. (Cl. 129—8.)

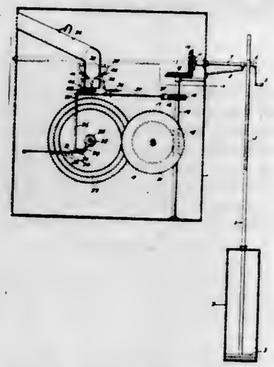
3. A loose leaf file comprising a back and upper and lower covers loosely secured together, each of said covers having a hinge near its inner end, a plate having orificed flanges on each of its ends, mounted on the upper surface of the lower cover and inside of the hinged portion thereof, said plate also having upwardly projecting posts secured thereto to engage perforations in the sheets to be bound, a wire spring overlying said plate, its ends projecting through the orifices in the flanges, said spring lying on the inner side of the upright posts, right angu-



lar plates joining rigidly at right angles the back and the inner hinged portion of the upper cover, each of said plates being provided with recesses to receive the ends of the wire spring and thereby secure the back in right angular position with the inner hinged portion of the lower cover, a carrier plate provided with posts designed to engage their respective perforations in the sheets to be bound, substantially as shown and described.

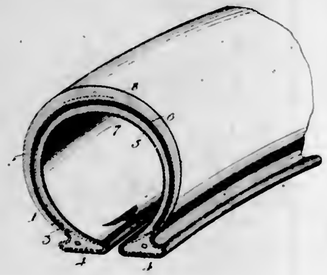
1,375,524. COMBINED DESK, TABLE, AND BED. JESSE M. MCGHEE, Estancia, N. Mex. Filed Sept. 1, 1920. Serial No. 407,434. 3 Claims. (Cl. 5—17.)

1. A convertible desk-bed comprising a body portion having a flat top and end pedestals with leg space beneath the top and between the pedestals, said body portion being divided vertically through one of said pedestals and at one side of said leg space, and a foldable bed section housed in said body portion and adapted to fold down into said divided pedestal when the device is used as a desk.



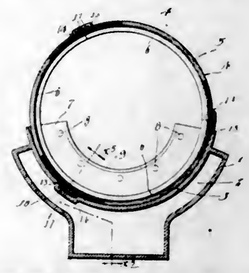
1,375,525. LUBRICATING MEANS FOR TROLLEY-WHEELS. ALLAN MCKINNON, Holyoke, Mass. Filed Aug. 11, 1919. Serial No. 316,572. 1 Claim. (Cl. 64—27.)

The combination with a trolley wheel and the two spaced supports between which it rotates, of a hollow



spindle for the wheel and passing through and beyond said supports, a screw thread on each protruding end of the spindle, a hollow lubrication reservoir threaded onto each end of the spindle to abut the adjacent supports, whereby the spindle is held against end play and the reservoirs are held to the supports, additional means for removably securing the reservoirs to their supports, and a passage in the hollow spindle to connect its interior to its external periphery.

1,375,526. GAS AND OIL VENDING DEVICE. HILLIARY B. MCREE, Palmetto, Fla. Filed Aug. 25, 1919. Serial No. 319,546. 3 Claims. (Cl. 194—70.)

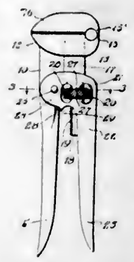


1. A device of the class described comprising liquid delivery means, manually operated means for actuating the same, a shaft rotatably connected with the manually operated means, locking means for said shaft, a pair of transversely arranged shafts, means for rotating one of said shafts by the first mentioned shaft, a gear on each of the transversely arranged shafts, one of said gears having sliding movement on its shaft and being normally out of mesh with the other gear, a cam member for moving said sliding gear into mesh with the other gear, coin controlled means for releasing the locking means and for actuating the cam member, such means including a pivoted lever actuated by the coin and connected with the cam member, a latch bar engaging said lever for holding the locking means in inoperative position and the gears in mesh and a projection on the sliding gear for moving the latch bar into releasing position when said gear makes a complete revolution.

1,375,527. TIRE-CASING. CHARLES WILLIAM MIEGEL, Jersey City, N. J. Filed Sept. 9, 1919. Serial No. 322,607. 1 Claim. (Cl. 152—13.)

A pneumatic tire casing consisting of inner and outer portions connected at their side edges and separated intermediate their side edges, each of said portions consisting of a layer of fabric material, and a layer of rubber, the layers of fabric material being inward, so that the rubber layer of the inner portion will contact with the fabric layer of the outer portion when the tire is deformed by pressure in use.

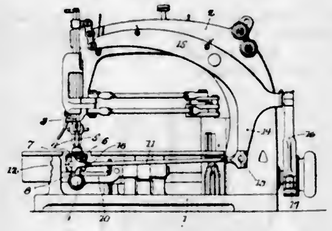
1,375,528. TIRE-RETREADING APPARATUS AND METHOD OF RETREADING TIRE-CASINGS. JACOB HENRY MILLER, San Luis Obispo, Calif. Filed Oct. 12, 1920. Serial No. 416,496. 10 Claims. (Cl. 18—18.)



1. In a tire-retreading apparatus, the combination of a matrix formed in sections and at least a portion of the matrix forming a complete circle, and means to fasten the adjacent sections together.

1,375,529. COMPOUND FOR TREATMENT OF SMUT. JOHN P. MINNE, Cosmopolis, Wash. Filed Nov. 24, 1919. Serial No. 340,222. 1 Claim. (Cl. 167—6.)

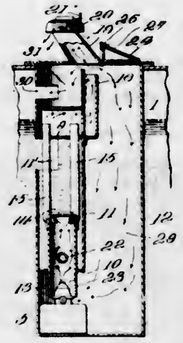
A compound for the treatment of grain to prevent smut comprising three pounds of lime, one-half pound of salt, two pounds of ashes, two gallons of water thoroughly heated and commingled.



1,375,530. WRENCH. CHARLES G. MOLINE, Wyandotte, Mich. Filed Nov. 11, 1919. Serial No. 337,114. 2 Claims. (Cl. 81—85.)

1. A wrench of the class described comprising a stationary handle, a shank extending parallel with the handle and threaded at one end and having an outer jaw at the other end, a guide yoke secured to one end of the stationary handle and slidably receiving the shank, said yoke extended at one end into an inner jaw, a movable handle, spaced arms extending from the movable handle and pivoted to the stationary handle, and transversely apertured, and an adjusting nut engaging the threaded portion of the shank and extending through the openings in the arms and engaged by the contiguous walls of the same, whereby the shank is adjustable to control the space between the jaws and a positive grip produced by actuating the movable handle.

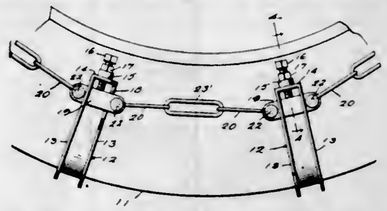
1,375,531. LOOPER-SUPPORTING MECHANISM FOR SEWING-MACHINES. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1917. Serial No. 181,092. 8 Claims. (Cl. 112—197.)



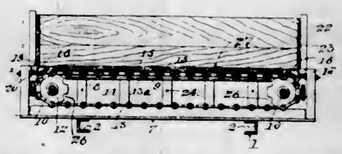
1. The combination with a pair of needles, of a looper coöperating with each needle, a looper-carrier for both loopers, and means whereby one of said loopers may be adjusted relative to the other of the looper-carrier and in a direction substantially at right angles to the longitudinal axis of the looper-carrier without disturbing its position relative to a horizontal line at the time of shedding its needle-thread loops.

1,375,532. FILTERING MATERIAL. ENRIQUE MÜLLER, El Paso, Tex. Filed Mar. 16, 1917. Serial No. 155,245. 10 Claims. (Cl. 210—203.)

6. In a process of preparing filtering material, treating ashes of vegetable matter with soluble silicate, washing, drying, comminuting the dried material, forming a plastic mass of the dried material with water and pulverized clay, molding the plastic mixture, drying and then baking same at a glowing heat.



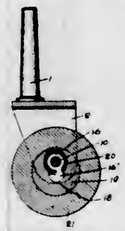
1,375,533. STOCK-FEEDING-TANK HEATER. BERT LEROY MYERS, Jackson, Mich. Filed Nov. 26, 1920. Serial No. 426,539. 5 Claims. (Cl. 126—360.)



3. The combination of a stock feeding tank, a heater adapted to be immersed in said tank comprising a casing partitioned to form an intermediate water chamber, a lower chimney located beneath said chamber and extending upwardly thereinto, a heating drum arranged above said chamber, an upper chimney opening to the atmosphere, a connection between said drum and upper chimney, said lower chimney being formed within said chamber with a plurality of relatively small branch conduits discharging into said drum, and means for conducting fresh air through a body of heated air in the upper portion of said casing and thence into said lower chimney.

1,375,534. ANTISKID DEVICE FOR TIRES. CHARLES A. NETHERCUTT, Logansport, Ind. Filed July 26, 1920. Serial No. 399,064. 4 Claims. (Cl. 152—14.)

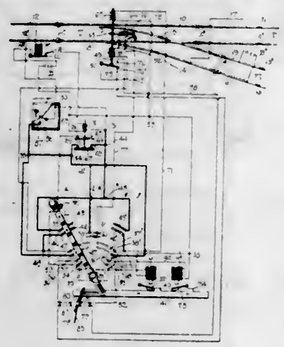
1. An anti-skid device of the character described comprising, a plurality of saddles to be arranged upon the tread of a tire, each saddle having longitudinal flanges provided near their ends with longitudinal slots, bar-links radially adjustable within the longitudinal slots, means to adjust each bar-link within said slots, and means connecting said bar-links.



1,375,535. TRUCK. WALTER C. ORTGIER, Wichita Falls, Tex. Filed Dec. 22, 1919. Serial No. 346,722. 3 Claims. (Cl. 298—1.)

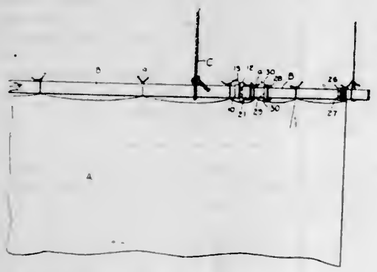
1. In a truck, the combination of a frame including two side bars extending substantially parallel with the longitudinal axis of the truck, a plurality of transverse girders resting upon and supported by the upper edges of said side bars, movable chains disposed in coöperating pairs, carried on said girders, floor boards between the girders and connecting the pairs of chains, extending substantially parallel with the side bars, and constituting a substantially horizontal floor for the truck, a removable side board for the truck, and means independent of the wheels of the truck for moving the chains to advance the floor toward the removable side board.

1,375,536. ADJUSTABLE CASTER. CHARLES W. OSTRANDER, Winsted, Conn. Filed Dec. 10, 1920. Serial No. 429,686. 7 Claims. (Cl. 16—164.)



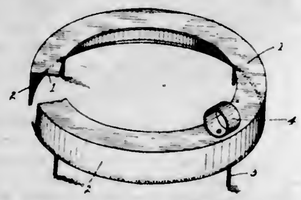
2. A caster of the character described comprising a casing having a pair of sides, a wheel arranged in said sides and an eccentrically mounted bearing member for each wheel arranged between said sides, a cam member rigidly connected with said sides and extending through the bearing member and means co-acting with the cam member and the bearing member for shifting the bearing member so as to vary the effective height of the caster.

1,375,537. SWITCH-OPERATING MECHANISM. CHARLES R. PEDDLE, Suffern, N. Y., and JAMES M. WALDRON, Highwood, N. J. Filed Oct. 4, 1919. Serial No. 328,478. 6 Claims. (Cl. 246—135.)



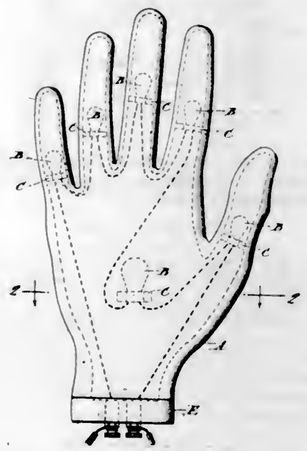
1. The combination with a railway switch, of electrical means for controlling the operation of the switch, a manually-movable part, a source of electrical energy, means

controlled by the movable part in circuit with the source for maintaining the switch-moving mechanism inoperative, means controlled by the moving part at a certain position of its movement controlling mechanism for releasing the



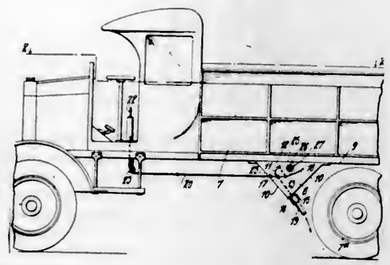
switch, means controlled by a further movement of the moving part for throwing the switch to its opposite limit, and means controlled by a train in block with the switch for throwing the moving part out of electrical control at any point in its movement.

1,375,538. ATTACHMENT FOR CYCLORAMIC-SCENERY BATTENS. ROBERT C. SCHEURER, West Hoboken, and FRED G. GREENBERG, Union Hill, N. J. Filed May 26, 1920. Serial No. 384,432. 11 Claims. (Cl. 46—70.)



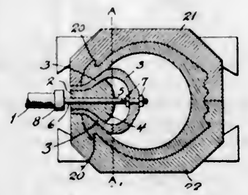
2. An attachment for cycloramic scenery battens, including an element having means to secure the same to a back batten, an element turnably mounted on the first element to swing vertically, and means carried by said turnable element and adapted to secure a side batten, said second-mentioned means being swingable laterally on the turnable element and being turnable with the latter about the first element.

1,375,539. PROTECTING-SHIELD FOR USE IN BAKING PASTRY. JENNIE SCOTT, St. Paul, Minn. Filed Oct. 2, 1920. Serial No. 414,178. 2 Claims. (Cl. 53—6.)



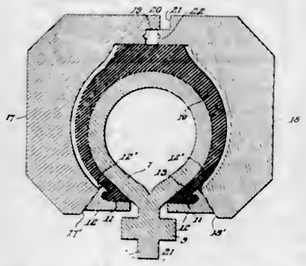
2. In a device of the class described, the combination with a pie plate, of a frame positioned so as to loosely surround the pie plate and formed with a wall extending a distance over the top and side thereof, and means for supporting it so positioned.

1,375,540. ELECTRIC SIGNAL FOR AUTOMOBILES AND OTHER VEHICLES. JOHN A. SMITH, Washington, D. C. Filed Oct. 3, 1918. Serial No. 256,712. 1 Claim. (Cl. 177—329.)



A signal of the class descibed comprising a hollow body formed of transparent material to simulate the appearance of a hand, a plurality of supports arranged one in each finger, the thumb and palm of the hand, an electric light bulb positioned in each support, a current conducting wire having connection with each bulb, terminal posts carried by the wrist portion of the hand connected with the ends of said wire and adapted to receive an electrical current from an outside source whereby the lights will clearly illuminate the entire hand, as and for the purpose set forth.

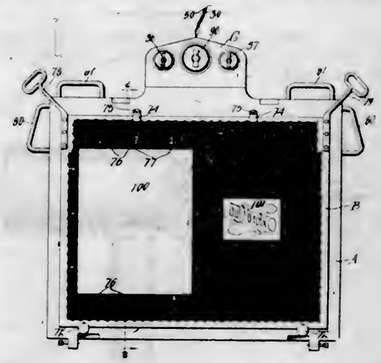
1,375,541. SAND-DISCHARGING DEVICE. FREDERICK G. TODT, Philadelphia, Pa. Filed Feb. 2, 1920. Serial No. 355,693. 2 Claims. (Cl. 291—36.)



1. A device of the character described including a hopper having a downwardly tapering bottom, one portion of which slants rearwardly, said hopper having an outlet tube extending in a direction substantially in alinement with said slanting portion of the bottom; a crank shaft rotatably mounted in opposite sides of the hopper and being interrupted in its length between said sides to provide a crank adapted to swing in close proximity to said slanting portion of the bottom of the hopper; a rod pivotally connected to said crank and extending substantially in the direction of said slanting portion of the hopper bottom, said rod having a tapered valve on its lower end adapted to move within said tube when the crank shaft is rocked; an arm connected to said crank shaft and located outside of said hopper; and means for oscillating said arm whereby the crank shaft will be rocked to withdraw the larger portion of the valve from the tube; substantially as described.

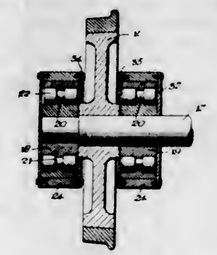
1,375,542. VULCANIZING EQUIPMENT FOR VULCANIZING CASINGS FOR PNEUMATIC-TIRE TUBES. JOHN TRAUM, Coshocton, Ohio. Filed Aug. 9, 1920. Serial No. 402,173. 4 Claims. (Cl. 18—17.)

1. In vulcanizing equipment to be used in connection with a vertical vulcanizer having an interior pressure ram, and that is adapted to vulcanize casings for pneumatic tire tubes, the combination of a continuous metal ring, the conformation of its sides near the outer periphery conforming to the inner surface near the inner periphery of the casing to be vulcanized, an inwardly directed flange carried by and forming the inner periphery of the continuous metal ring, and a rubberized fabric or cord annular casing vulcanized to conform to the sides of the said inwardly directed flange and to encompass the outer periphery of the continuous metal ring so as to leave space between the inner surface of the said vulcanized casing and the surface of the outer periphery of the said continuous metal ring.



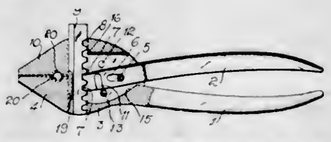
1,375,543. TIRE-MOLD. ELNO H. TRUMP, Barberton, Ohio. Filed Sept. 18, 1919. Serial No. 324,307. 12 Claims. (Cl. 18—42.)

1. A tire mold embodying a core, molding blocks positioned at opposite sides thereof, and tire stretching rings associated with the inner edges of the molding blocks, the engaging faces of the molding blocks and rings being beveled and arranged to cause the rings to be moved relative to the core flange.



1,375,544. ELECTRIC EMBOSSING-PLATE HEATER. SIDNEY M. WEATHERLY and HOWARD J. STACH, Hartford, Conn.; said Stach assignor of his right to National Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 16, 1918. Serial No. 250,175. 4 Claims. (Cl. 219—19.)

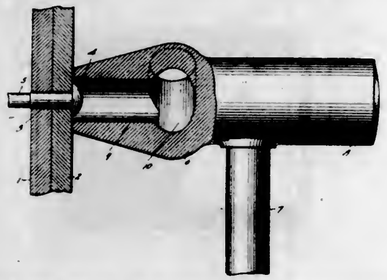
1. An embossing plate heater comprising a base, means for heating said base, supporting and positioning lugs on said base, a surface plate formed with angular notches in its edge to engage said positioning and supporting lugs,



clamps for securing its upper edge to said heater base, and means for supporting and adjusting embossing dies on the surface plate, substantially as set forth.

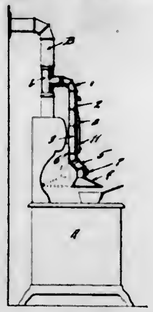
1,375,545. WHEEL. GEORGE YATES, Chicago, Ill. Filed Apr. 7, 1920. Serial No. 371,868. 1 Claim. (Cl. 64—39.)

The combination with an axle, of a wheel having a hub mounted on the axle, spaced inner and outer annuli arranged on opposite sides of said hub and having their opposed sides provided with ribs, annular series of rollers arranged between said spaced inner and outer annuli and having annular grooves receiving said ribs, said outer annuli being formed in sections having their ends formed with interfitting lugs having registering openings, holding rings surrounding said outer annuli and provided with sections having their ends formed with lugs, said second named lugs being formed with registering openings, wedge-shaped keys inserted through said opening for connecting the said sections, the ends of said lugs being beveled, and inner and outer washers secured to said holding rings, one of said washers being provided with an opening snugly receiving said hub.



1,375,546. WRENCH. GEORGE W. ANSLEY, Long Beach, Calif. Filed June 10, 1920. Serial No. 388,012. 3 Claims. (Cl. 81—86.)

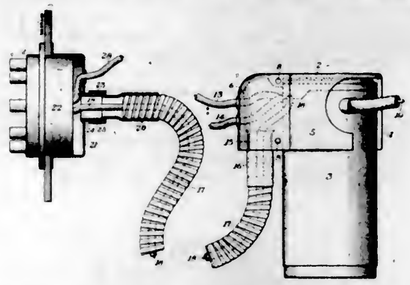
1. A wrench comprising a stationary jaw and a movable jaw, the latter carrying a rack bar, a handle carrying a head formed integral with said stationary jaw, and a lever having a toothed end engaging the teeth of said



rack bar and provided with a longitudinally extending slot, and a fulcrum pin carried by said head and passing through said slot.

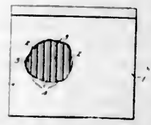
1,375,547. TOOL. BENJAMIN F. BAIRD, Hollidaysburg, Pa. Filed Apr. 14, 1920. Serial No. 373,758. 1 Claim. (Cl. 29—86.1.)

As a new article of manufacture, a tool comprising a handle, a sledge disposed at right angles to the handle and connected at its intermediate portion thereto, said sledge including at one end a solid striking portion, said sledge at its other end including a tapered head having a longitudinal rivet-receiving bore therein and having a transverse bore communicating with said longitudinal bore, said longitudinally bored end being unobstructed opposite said end and at the sides thereof to permit the tool to bear against a plate extending any distance beyond all sides of the tool.



1,375,548. CONDUCTOR FOR DISPOSING OF FUMES ARISING FROM COOKING UTENSILS. JOHN J. BARNES, Henry, Ill. Filed Sept. 15, 1919. Serial No. 323,933. 1 Claim. (Cl. 126—301.)

A fume conductor of the character described comprising a mouth-piece, an upper pipe section, a lower pipe section telescopically fitted to said upper pipe section, one of said pipe sections having a rack bar fixed thereto, said rack bar having vertically extending parallel guards, the other of said pipe sections having a catch fixed thereto and engaging said rack bar between said guards whereby the sections are held in adjusted positions, said mouth-piece being eccentric to and pivotally connected to said lower pipe section at a point below said rack bar and catch, whereby the eccentric mouthpiece may be adjusted on its pivot while the upper and lower pipe sections are in different relative positions.



1,375,549. ARMOR FOR IGNITION SYSTEMS. ORANGE P. BARNES, Chicago, Ill., assignor, by mesne assignments, to National Motor Control Co., a Corporation of Delaware. Filed June 5, 1919. Serial No. 301,856. 5 Claims. (Cl. 123—198.)

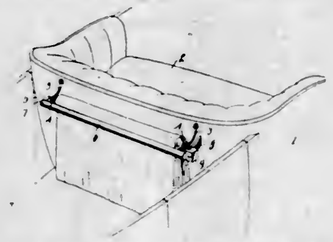
1. The combination with an ignition system having a wire leading from one pole of a source of energy to one pole of a spark coil, of an incased switch connected to an intermediate portion of said wire, a cover for one of said poles, means for securing said cover in position

about said pole, and an armor connected to said switch casing and the cover inclosing that portion of the wire between the switch casing and the cover, substantially as described.

1,375,550. SEPARATOR FOR STORAGE BATTERIES. WILLIAM BEST, Kansas City, Mo. Filed Dec. 10, 1919. Serial No. 343,819. 4 Claims. (Cl. 204—29.)

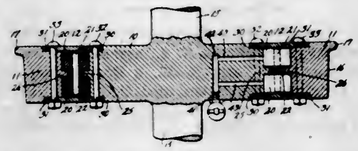
3. A separator for storage batteries, composed of slate and having longitudinal grooves in its face.

1,375,551. MEANS FOR FACILITATING THE OPENING OF TINS. ALBERT BLANKS, London, England, assignor to The Nugget-Polish Co., Ltd., London, England. Filed Mar. 26, 1919. Serial No. 285,182. 1 Claim. (Cl. 220—42.)



In a tin or like container having a mouth of smaller diameter than the body portion thereof and having a removable lid which has a top member and a depending flange adapted to close the mouth of the container in a substantially hermetical manner, the mouth portion being so formed as to provide an annular shoulder on the outer face of the body portion against which the lower edge of the lid abuts when in closed position, means whereby the lid while so closing the container may be tilted to a small extent relatively to the mouth of the container for the purpose of facilitating its removal, said means comprising a pair of oppositely disposed and inwardly projecting embossments formed on the depending flange of the lid and so located as to be above the edge of the mouth of the container when the lid is in normal closing position and adapted to engage and coöperate with the said edge and shoulder when the lid is tapped at a point between said embossments to tilt said lid and spread the depending flange, substantially as described.

1,375,552. SILVER-SOLDER. WILLIAM BOCCHETTI, Brooklyn, N. Y. Filed Feb. 10, 1920. Serial No. 357,726. 4 Claims. (Cl. 75—1.)



1. A silver solder containing silver 55 to 65%, copper 20 to 30%, zinc 10 to 20%, and arsenic trioxid.

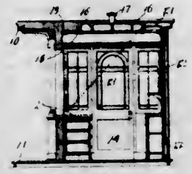
1,375,553. LOCKING-RAIL FOR AUTOMOBILES. PIERRE BRAZEAU, Racine, Wis. Filed Oct. 4, 1920. Serial No. 414,611. 2 Claims. (Cl. 45—13.)

1. In a lap-robe holder, opposed clamping bars having opposed faces, and a strip of flexible material on one of the opposed faces said strip being secured at the middle and free at the sides, substantially as set forth.

1,375,554. ROLLER-BEARING CAR-WHEEL. WILEY B. BRIDGES, Texarkana, Ark. Filed Mar. 10, 1920. Serial No. 364,815. 2 Claims. (Cl. 64—62.)

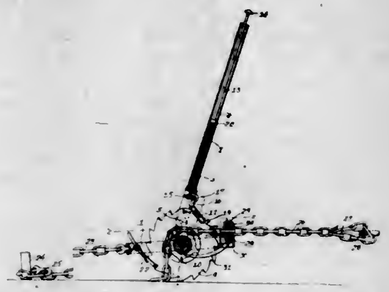
1. A car wheel, comprising a fixed center provided on its peripheral face with an annular shoulder, a rim having a tread and flange and provided on its inner edge with an annular shoulder opposite the said center shoulder, pairs of rollers interposed between the said center and the said rim, the rollers of each pair being arranged on opposite sides of the said shoulders, shafts, one for each pair of rollers, and a spacing ring extending between the said shoulders and the rollers of each pair and carrying the said shafts.

1,375,555. AUTOMATIC FLUID-REGULATING DEVICE. WILLIAM E. BROWN, Ashtabula, Ohio, assignor of one-half to William C. Harvey, Akron, Ohio, and one-half to Henry Bertrand Perrin, Geneva, Ohio. Filed Jan. 8, 1920. Serial No. 350,080. 7 Claims. (Cl. 251—123.)



1. In a device for controlling the flow of fluid through a passage, two plates pivotally supported, elastic means to hold said plates against fluid-pressure, said device being attachable to the interior of a fluid-passage in such relation that said plates extend from their pivotal support toward opposite sides of the passage, one of said plates having a greater area between its outer end and its pivotal support than the area of the similar part of the other plate, whereby a greater fluid-pressure is exerted on one of said plates than on the other.

1,375,556. VEHICLE-BODY SUPPORT. CHARLES E. BURNETT, Wolcott, N. Y. Filed Jan. 16, 1920. Serial No. 351,880. 6 Claims. (Cl. 267—19.)

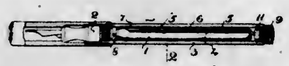


1. The combination with a vehicle body and axle, of a pair of leaf springs secured at their outer ends to said body and extending toward each other, a pair of shackles movable about a common axis intermediate their ends and each pivoted at its upper end to the inner end of one of said leaf springs, rocking members carried by said axle, and lever springs disposed beneath said leaf springs and fulcrumed intermediate their ends to said body, each of such lever springs having pivotal connection at its outer end with one of said rocking members and at its inner end with the lower end of one of said shackles, the said shackles connecting each lever spring with its opposite leaf spring.

1,375,557. BOOTH. PAUL M. BUSICK, Memphis, Tenn. Filed Aug. 31, 1920. Serial No. 407,179. 4 Claims. (Cl. 20—1.)

1. A booth of the character described provided with lights in the ceiling thereof and a hinged closure for the front thereof adapted, when raised, to cover said lights and serve as a light diffuser, substantially as set forth.

1,375,558. RATCHET-CHAIN BLOCK. WILLIAM RICHARDSON BUTNER, Yerington, Nev. Filed Sept. 3, 1920. Serial No. 408,107. 4 Claims. (Cl. 254—164.)

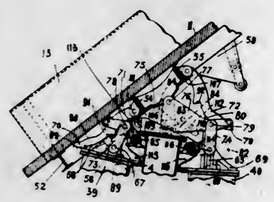


1. A ratchet chain block, comprising a frame, a lever pivotally connected to the frame, a wheel having rotary mounting in the frame and comprising a central sprocket wheel and ratchet wheels at opposite sides thereof, a pawl pivotally connected to the lever and engaging both ratchet wheels, a member pivotally connected to the lever engaging the intermediate portion of the pawl, and a spring pressed rod carried by the lever and controlling the operation of said member.

1,375,559. FOUNTAIN AND OTHER RESERVOIR-PEN. DUNCAN CAMERON, Edinburgh, Scotland. Filed Oct. 29, 1920. Serial No. 420,450. 2 Claims. (Cl. 120—46A.)

2. Fountain and other reservoir pens of the self-filling type comprising a collapsible ink container, a pressure

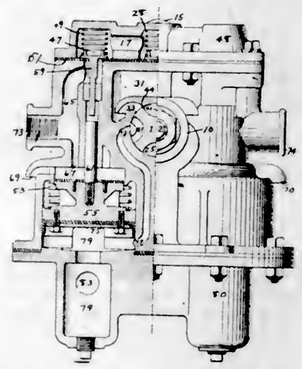
bar adapted to press upon the said container, an operating bar jointed to the said pressure bar by means of parallel motion links and also connected to a plug member



adapted to fit into the end of the pen-barrel, and means for preventing the pressure bar from moving endwise when the said operating bar is operated.

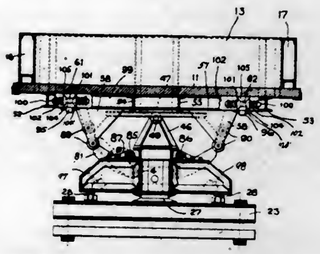
1,375,560. GERMICIDE-BRUSH. DAVID NEWTON EMANUEL CAMPBELL, Baltimore, Md. Filed Dec. 13, 1917. Serial No. 206,981. 1 Claim. (Cl. 15—51.)

A brush of the class specified, comprising a hollow body forming a tank to receive a liquid and provided with a handle and filling means, the bottom of the body having a plurality of outlet openings, a brush member having a flat plate provided with an upstanding flange for tight jointure with the body bottom which is located above and spaced from the brush member plate, the plate of said brush member having a plurality of openings therein in alinement with the openings of the body bottom, brush tufts inserted upwardly through the openings of the said plate and having their upper terminals partially extending through the openings in the body bottom, and a horizontally disposed securing wire carried by the brush member and inserted through the brush tufts and dipped downwardly toward and into the openings of the brush member plate to positively hold the brush tufts in place.



1,375,561. DUMP-CAR. ROY E. CARTZDAFNER, Passaic, N. J., assignor to Magor Car Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 27, 1916. Serial No. 128,110. 19 Claims. (Cl. 105—271.)

1. In apparatus of the class described, in combination, an underframe, a car body pivotally mounted thereon, a device resisting by compression the movement of the car body from normal position, means for unlocking said device and swinging the car into dumping position, and means for automatically restoring said device to locking position during the righting movement of the car.

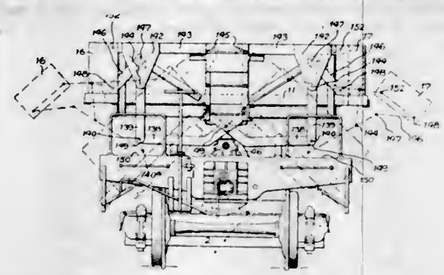


1,375,562. VALVE-MECHANISM. ROY E. CARTZDAFNER and HORACE A. KETCHAM, Passaic, N. J., assignors, by mesne assignments, to Magor Car Corporation. Filed Oct. 28, 1916. Serial No. 128,349. 11 Claims. (Cl. 138—14.)

1. In apparatus of the class described, in combination, a distributing member having a neutral and an operating position, a relay energized by fluid passing from a source of pressure through said member to said relay, means automatically cutting off said member from said source of pressure when said member is in neutral position, a work

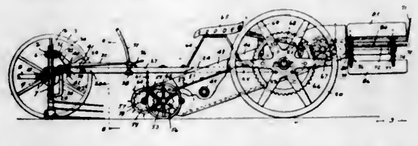
circuit energized from said source through said relay when the relay is energized, and connections for automatically exhausting said work circuit when the relay is deënergized.

1,375,563. SHOCK-ABSORBER FOR DUMP-CARS. ROY E. CARTZDAFNER, Passaic, N. J., assignor to Magor Car Corporation, New York, N. Y., a Corporation of New York. Original application filed Oct. 27, 1916, Serial 128,110. Divided and this application filed Nov. 23, 1918. Serial No. 263,825. 1 Claim. (Cl. 105—270.)



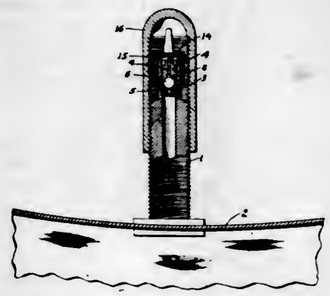
A shock absorber for tilting body dump cars combining a wedge adapted to be secured to the tilting car body, a second wedge facing the first wedge limited in its movement away from the first wedge and having a shank projecting downwardly to engage an abutment fixed on the under-frame of the car as the car reaches dumping position and arranged to be forced toward said first wedge by said abutment, a transverse floating pin between said wedge members, a pair of opposed wedges slidably mounted on said pin and frictionally engaging the first and second wedges and compression springs between said wedges and the ends of the pin substantially as described.

1,375,564. DUMP-CAR. ROY E. CARTZDAFNER, Passaic, N. J., assignor to Magor Car Corporation, New York, N. Y., a Corporation of New York. Original application filed Oct. 27, 1916, Serial No. 128,110. Divided and this application filed Nov. 23, 1918. Serial No. 263,826. 1 Claim. (Cl. 105—277.)



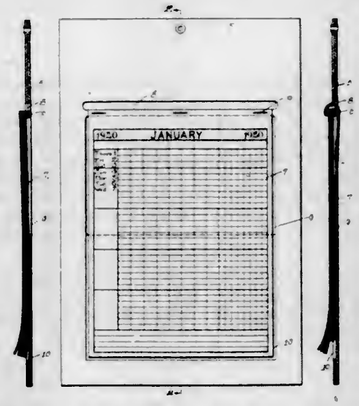
In apparatus of the character described, in combination, a car body provided with a movable door, an under-frame on which the body is pivotally mounted, a link mechanism controlling the movement of the door comprising a straight compression dumping bar, a link pivoted coaxially with the axis of the car body and connected to the lower end of the dumping bar, a top bar pivotally connected at one end to the car body and at the other end to the upper portion of the door, a link connecting the top of the dumping bar

and the lower portion of the door, and a gusset plate rigidly secured to the top bar and depending therefrom



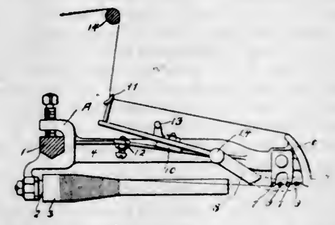
to the lower end of which the dumping bar is pivotally connected at a point intermediate its ends, substantially as and for the purpose described.

1,375,565. BEAN-HARVESTER. GUY B. CHAMBERLIN, Van Nuys, Calif., assignor of one-half to Jerry L. Hall, Hynes, Calif. Filed May 19, 1919. Serial No. 298,179. 5 Claims. (Cl. 56—193.)



1. A bean harvester comprising a suitable traction mechanism, an endless apron pivotally and operatively mounted upon the traction mechanism, a rotary rake operatively mounted with relation to the apron, a stationary platform at the opposite end of the apron, and dumping means upon the platform operating transversely thereof.

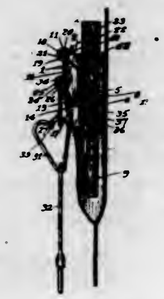
1,375,566. VALVE. CHARLES A. CHAMPLIN, Hope, Ark. Filed Jan. 21, 1919. Serial No. 272,244. 3 Claims. (Cl. 152—12.)



3. In an inflation valve, the combination with a standard valve stem adapted to be permanently secured to the article to be inflated and having an exteriorly threaded reduced portion at its upper end adapted to receive a closing cap, the said reduced portion also being interiorly screwthreaded to a depth substantially equal to the depth of said reduced portion, of a self-contained assembled valve structure adapted to be bodily fitted in and removed from the upper end of the standard valve stem, and comprising an exteriorly threaded core of uniform diameter throughout its entire length and of substantially the same depth as the interiorly threaded reduced portion of said stem and provided in its inner end with an enlarged recess terminating in a curved valve seat, a bore of smaller diameter extending from said recess to the onter end of said core, and a counter-sink or chamber at the inner end of said smaller bore, the said enlarged recess being screwthreaded at its lower end, an independent headed valve-operating rod adapted to be fitted in the lower end of said core and extendnig through the reduced bore therein with its head fitting in the countersink of said bore and its upper end adapted to be projected beyond the upper end of the core by the pressure of the valve, a ball valve loosely fitted in the enlarged recess in said core and adapted to engage the curved seat therein under pressure, and a perforated disk threaded wholly within the lower end of said recess to maintain the parts of the valve in assembled condition in said core, the said core having a wrench receiving upper end entering flush within the upper end of the standard valve stem, whereby the said valve in its assembled condition may readily be fitted in and removed from the standard valve stem.

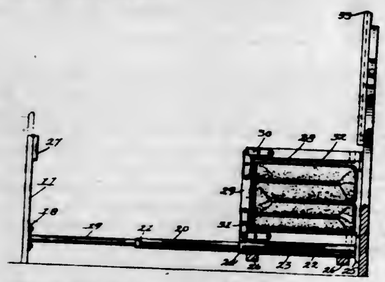
1,375,567. CALENDAR. JOHN AUGUST CHRYSANDER, New York, N. Y. Filed Aug. 27, 1920. Serial No. 406,266. 1 Claim. (Cl. 40—119.)

A pad, comprising a backing having a transverse slot a short distance from its upper end, an opening below and adjacent to the slot, and a recess in its front face, said recess extending from the lower edge of the opening to within a short distance of the bottom of backing, and a plurality of superposed leaves secured to the front face of the portion of the backing between the slot and opening, whereby the leaves can be passed through the slot to the rear of the backing and then through the opening to lie in recess in the front face of the backing.



1,375,568. WINDING-MACHINE. JOHN V. CUNNIFF, Fall River, Mass., assignor of one-half to Patten Bros., Inc., Fall River, Mass. Filed Feb. 10, 1920. Serial No. 357,555. 7 Claims. (Cl. 242—154.)

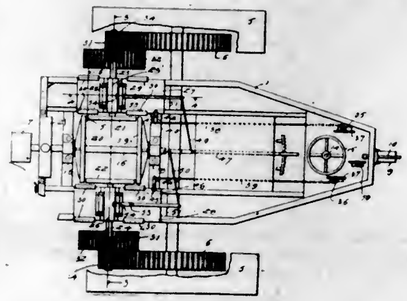
1. In a winding machine, a bracket for attachment to the spooling bar having a main arm formed with a curved friction plate, a bobbin spindle carried by the bracket, an



arm pivoted to the main arm and having a thread eye at one end, a weight adjustable on the pivoted arm, stops for the pivoted arm borne by the main arm, a plate on the main arm having spaced prongs and prongs carried by the pivoted arm and arranged to alternate with the prongs of the plate.

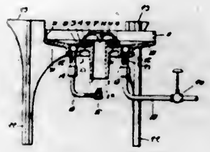
1,375,569. COMBINATION-HOLDER. HYLAND L. CUSICK, Pittsburgh, Pa. Filed May 3, 1920. Serial No. 378,713. 8 Claims. (Cl. 24—3.)

1. A combination article holder comprising a supporting clasp having an inner clasp plate, a labyrinth slot formed in the wall of said plate, an outer bent plate having a stud formed thereon, and coacting with said inner plate to secure the supporting clasp to the wall of a garment pocket, a front plate having a labyrinth slot slidably engaging under the head of the outer plate stud, and a pocket-book clasp having a stud engaging in the labyrinth slot formed in the wall of the inner clasp plate.



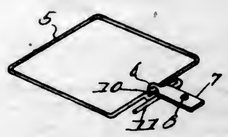
1,375,570. COMBINATION FURNITURE. ANTONI DANCIEWICZ and WILLIAM R. WHITAKER, Ludington, Mich. Filed June 24, 1920. Serial No. 391,434. 1 Claim. (Cl. 5—34.)

A combination dresser and folding bed of the character described, comprising in combination with the movable front wall of said dresser a support for a spring frame and mattress formed in three hingedly connected parts, said support composed of three slidably engaged slotted bars, pins on the inner ends of two of said bars adapted to slide within the slot of the next adjoining bar for limiting the relative sliding motions of the bars, supporting slats forming the bottom of said dresser for said spring and mattress support when in non-extended position, a top for said dresser to cover said parts in their non-extended position and adapted to engage the front face of the rear wall of the dresser in extended position of the parts to form a bed.



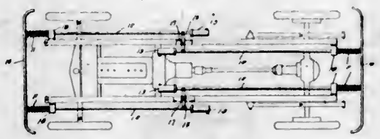
1,375,571. TRACTOR. ARTHUR DAVIS, Livingston, Ill. Filed Aug. 6, 1920. Serial No. 401,687. 3 Claims. (Cl. 180—17.)

1. A tractor including a frame and a power source, a front axle secured to said frame, drive wheels journaled on said axle, a steering wheel supporting the rear end of the frame, a drive shaft journaled to the frame and connected to the power source, spaced disks secured to said drive shaft, driven shafts mounted on said frame for



movement longitudinally and transversely of said frame, disks carried by said driven shafts and positioned between the first named disks, and means connecting the driven shafts to the drive wheels.

1,375,572. GAS RING OR BURNER. SYDNEY JAMES WALLACE DAVIDSON, Auckland, New Zealand. Filed Mar. 29, 1920. Serial No. 369,733. 7 Claims. (Cl. 158—69.)

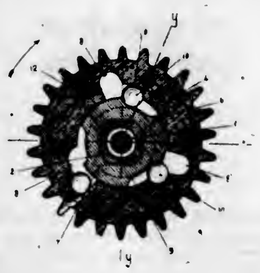


4. A device for the purpose set forth comprising a body portion with a central tube projecting vertically therethrough; a ring with cross grooves in its lower edge and an internal flange around its upper edge, sitting within a flange on said body portion and around said tube; and a cap with cross grooves in its lower edge and an inverted cone on its under surface, recessed in said ring.

1,375,573. CHAIR ATTACHMENT. LITTLE D. DENNIS, Philadelphia, Pa. Filed July 18, 1919, Serial No. 311,791. Renewed Feb. 11, 1921. Serial No. 444,263. 1 Claim. (Cl. 248—20.)

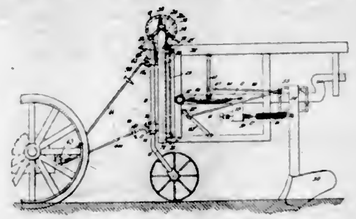
A supporting frame comprising a wire shaped to conform to the cross sectional contour of the receptacle it is designed to support, one end of the wire being twisted and extended outwardly substantially at right angles and flattened to provide an attaching arm, the other end of the wire being offset outwardly and then folded upon itself and positioned below the first named end to form an abutment to engage a suitable base or support.

1,375,574. AUTOMOBILE-FENDER. GEORGE W. DODSON, Pittsburg, Tex. Filed Dec. 7, 1920. Serial No. 428,962. 3 Claims. (Cl. 293—55.)



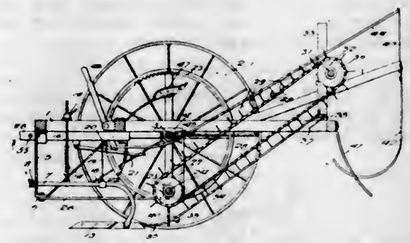
2. A fender for motor cars having front and rear fender bars provided with opposed cushioning springs and equalizers having rockers with which said fender bars are mutually connected, and dash pot cushioning means.

1,375,575. FRAMEWORK KNITTED FABRIC. EMIL ALBERT DRECHSEL, Gornsdorf, Germany, assignor to the Firm of Albin Drechsel Sohne, Gornsdorf, Germany. Filed Sept. 22, 1916. Serial No. 121,663. 6 Claims. (Cl. 66—4.)



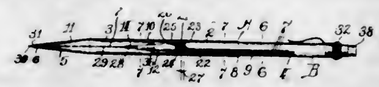
2. In the manufacture of frame work knitted fancy fabrics, the method of producing figures, consisting in laterally shifting within a course the loops not contributing to the formation of the figure to empty needle-hooks disposed between adjacent portions of the figure.

1,375,576. AUTOMATIC CLUTCH. LUIGI DUCA, Turin, Italy, assignor to Societa Anonima Manifattura Luigi Duca, Busta Arsizio, Italy, a Company of Italy. Filed Dec. 26, 1919. Serial No. 347,294. 2 Claims. (Cl. 192—44.)



1. An automatic clutch, comprising concentric driving and driven members having confronting annular rims which are formed with coöperating recesses; and a locking element associated with each pair of coöperating recesses; each recess in the driving member having a body portion, the surface of which is concentric with the axis of the driving member, and arcuate end portions whose radii of curvature are equal to the radius of the associated locking element; and each recess in the driven member having an arcuate portion whose radius of curvature is equal to the radius of the locking element, and an adjacent portion whose depth is greater than the diameter of said locking element.

1,375,577. MOUNT FOR PLOWS AND OTHER TOOLS. ELON DUNLAP, Diamond Springs, Calif. Filed July 19, 1920. Serial No. 397,163. 10 Claims. (Cl. 97—7.)

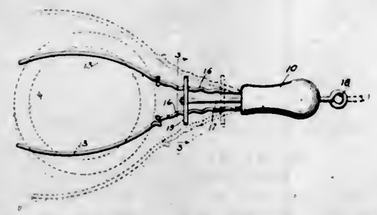


1. In a mount for plows, a caster, a post mounted on the caster, a plow frame pivoted on a vertical axis to the post, draft means connected with the caster and means to adjust the draft vertically on the caster.

1,375,578. PEANUT-HARVESTING MACHINE. JOSEPH PASCHAL FIELDS, Attapulgus, Ga. Filed July 18, 1918. Serial No. 245,506. 5 Claims. (Cl. 55—138.)

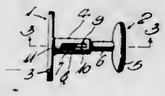
1. In a peanut harvesting machine, a supporting frame, beams adjustably supported from said frame, an earth working element adjustably connected to said beams, a plurality of rods connected at their forward ends to said earth working means and extending rearwardly, means for slidably coupling said rods at their rear ends to said frame, and conveyer means operating over said rods.

1,375,579. PENCIL. HOWARD L. FISCHER and FRANK J. KRISTOFEK, St. Paul, Minn. Filed Sept. 7, 1918. Serial No. 254,522. 2 Claims. (Cl. 120—17.)



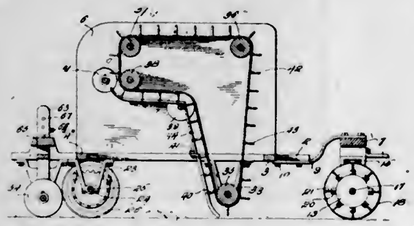
1. A pencil having its body formed of two thin walled telescoping tubular members of similar transverse formation throughout the major part of their telescopic length each member having a thin tubular wall throughout its length, a lead holding means resiliently connected to the inner end of the rear member for holding a marking lead to project through the forward member in writing position and frictional means formed by distorting the undivided inner end of the forward member to engage the uniform smooth outer surface of the rear member to hold said members frictionally together with the outer contour of said pencil body symmetrical throughout its length.

1,375,580. PLATE-LIFTER. THOMAS FISHER, Kearney, N. J. Filed Sept. 14, 1917. Serial No. 191,460. 2 Claims. (Cl. 294—33.)



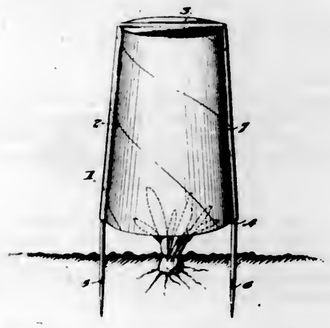
1. A plate lifter comprising a single length of resilient material bent upon itself to provide a pair of gripping arms, crimped portions adjacent the connected extremities of said arms, and a slide for effecting the relative adjust-

ment of the arms and also constituting a handle, said slide being provided with longitudinally arranged slotted portions forming guides for the reception of the arms and transversely disposed devices arranged in said slot portions for retaining the arms therein, said devices also being adapted to co-act with the crimped portions of the arms for maintaining the adjustment of the same.



2. In a device of the class described, the combination of a single length of resilient material bent so as to form a pair of arms and a manipulative element and provided with a plurality of crimped portions, of a member comprising slots cöoperative with said arms and movable relatively to said manipulative element, and means for retaining said arms in said slots and coöperative with said crimped portions to prevent relative movement of said manipulative element and said member.

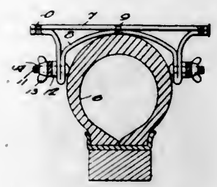
1,375,581. CUFF-LINK. JOSEPH DORILE FONTAINE, North Attleboro, Mass. Filed Jan. 4, 1921. Serial No. 434,965. 1 Claim. (Cl. 24—102.)



A cuff-link comprising a relatively large flat head including an integral laterally extending hollow stem having a slot formed in one side, said slot being closed at its end and reduced in width at its outer end to form a notch, a second and smaller head including a lateral shank telescoping into said stem, said shank carrying a lateral locking lug slidable in said slot and receivable in said notch to prevent relative rotation of the heads and to permanently connect the heads together, and a coiled spring arranged in said stem and bearing against the free end of the shank to retain the lug in the notch and to prevent relative rotary or sliding movement of the stem and shank.

1,375,582. STALK-CUTTING MACHINE. ERNEST S. FORNEY, Fullerton, Nebr. Filed Oct. 7, 1920. Serial No. 415,400. 5 Claims. (Cl. 55—118.)

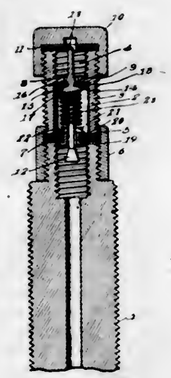
1. In a machine of the class described, a wheel supported frame, means carried at the front of the machine for cutting down a plurality of rows of corn stalks, a rake positioned rearwardly of the stalk cutting means, rollers carried by the frame and an endless belt trained over said rollers coöperating with said rake for conveying the stalks, a plurality of driven saws also coöperating with said endless conveyer for cutting the stalks into short lengths, means for driving the said conveyer and saws from the ground supporting wheels, and adjustable disk elements supported by the rear of the frame.



1,375,583. PLANT-PROTECTOR. ROBERT B. FAYE, Pueblo, Colo. Filed June 28, 1920. Serial No. 392,273. 4 Claims. (Cl. 47—22.)

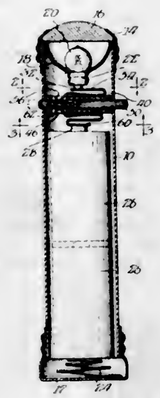
1. A plant protector including an elongated body portion closed at one end and open at the other for placement over a plant, anchor sprags embedded in the material of the body portion and extending beyond the open end thereof.

3. A plant protector including an elongated body portion closed at one end and open at the other for placement over a plant, a substantially U-shaped anchor having its ends formed as anchor sprags fitted over the closed end of said body portion with its legs received along the side wall thereof and the anchor sprags projecting beyond the open end, and an outer covering secured upon said body portion over said anchor to retain the same in place.



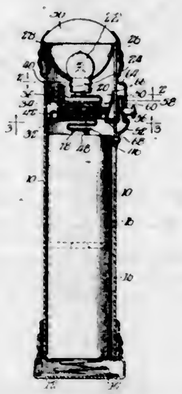
1,375,584. DETACHABLE TRACTION-TREAD. PAUL E. GERO, Manistique, Mich. Filed Mar. 28, 1919. Serial No. 285,810. 1 Claim. (Cl. 152—16.)

A detachable traction tread for vehicle tires comprising a tread plate adapted to span a tire tread and having an inverted U-shaped tire embracing retaining member secured to the inner face of said plate, the legs of said member being adapted to straddle and extend down over the sides of the tire, said legs being folded back upon themselves with their terminals curved outwardly and secured to said tread plate, and means extended through the folded portion of said legs for attaching the tread to a tire.



1,375,585. VALVE. WILLIAM GOODWIN and MARY GOODWIN, Peterboro, Ontario, Canada. Filed Feb. 10, 1920. Serial No. 357,662. 2 Claims. (Cl. 152—12.)

1. In a valve, the combination of a casing section, a coupling nut swiveled on the inner end of said casing section, an annular washer seated in the coupling nut with its outer edge portion removably held between the same and the casing section, a thimble having a circumferential groove receiving the inner edge portion of said washer and also having a central opening and an outwardly tapered outer portion and a slot in the latter, a spindle having an enlargement at its inner end and an enlarge-

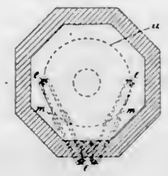


ment at an intermediate point of its length, a spring surrounding the spindle and interposed between the thimble and said intermediate enlargement of the spindle, and packing about the spindle and on said enlargement and bearing against the casing section.

1,375,586. POCKET HAND-LAMP. JOHN GRAVES, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Nov. 8, 1919. Serial No. 336,610. 7 Claims. (Cl. 240—8.5.)

4. A device of the class described, the combination of a suitable case containing a battery and an electric lamp each having two terminals, means connecting one terminal of the battery with one terminal of the lamp, the other remaining terminals being in proximity to each other, an insulating plate between the last mentioned terminals of the lamp and battery, switch members on opposite sides of said insulating plate, contacting respectively the adjacent lamp and battery terminal, there being a recess formed in the insulating plate through which said switch members may be connected together and a member reciprocatable in proximity to the plate and across the case carrying a conductor member adapted in one position of said reciprocatable member to connect said contacts and in another position of said reciprocatable member to be out of contact.

1,375,587. POCKET HAND-LAMP. JOHN GRAVES, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Nov. 10, 1919. Serial No. 336,940. 11 Claims. (Cl. 240—8.5.)

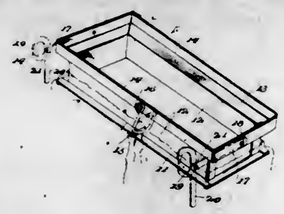


1. In mechanism of the class described, a case, a transversely perforated partition across the case, normally separated electric contact members entering said perforation from opposite sides of the partition, and a plunger mounted in an opening in the partition and reciprocatable across the case to force one contact member into engagement with the other.

1,375,588. EXPLOSIVE. BIRGER FJELD HALVORSEN, Christiania, Norway. Filed Dec. 4, 1919. Serial No. 342,518. 3 Claims. (Cl. 52—5.)

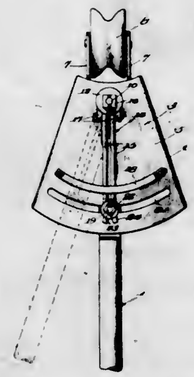
1. As a new article of manufacture, a commercial explosive comprising an explosive nitroderivative of urea.

1,375,589. APPLIANCE FOR CASTING METAL INGOTS INTO MOLDS. HAROLD HERON HOSACK, Twickenham, England. Filed Aug. 28, 1919. Serial No. 320,422. 2 Claims. (Cl. 22—79.)



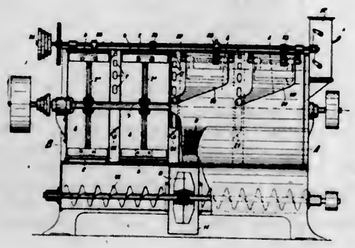
1. The herein described method of casting metal from a ladle, consisting in delivering the metal from said ladle into a pilot ladle counterbalanced to maintain said pilot ladle floating on the surface of the metal rising in the mold, whereby to maintain the pilot ladle constantly at the level of the rising metal in the mold to deliver the metal from the pilot ladle at or near the surface of the metal in the mold.

1,375,590. BAG-HOLDER. EARL W. HURLBUTT, Lima, Ohio. Filed Oct. 5, 1920. Serial No. 414,858. 3 Claims. (Cl. 83—26.)



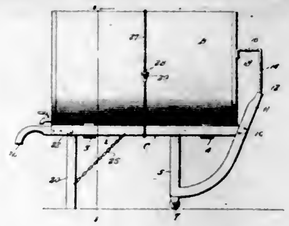
2. A bag holder having an intermediae upstanding wall, a downwardly and outwardly flaring flange at the lower edge of said wall, an upwardly and outwardly flaring flange at the upper edge of said wall, and an upstanding

edge portion at the outer edge of said upper flange, in combination with a holding pin projecting from the



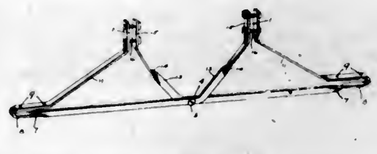
upstanding wall and a hook member coöperating with said pin and pivotally supported on the upstanding edge of the holder.

1,375,591. TROLLEY. LUDWIG W. KAEMPF, Fort Scott, Kans. Filed Feb. 24, 1920. Serial No. 361,034. 3 Claims. (Cl. 191—59.)



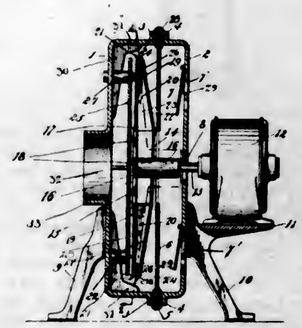
1. In a device of the class described, the combination with a pole or the like, of a head mounted thereon for transverse oscillatory movement, a contact element carried by the head, and a pair of spring legs for resisting movement of the head in opposite directions.

1,375,592. MACHINE FOR SHELLING AND POLISHING GRAIN AND THE LIKE. LEOPOLD KASPAR, Gross-Senitz, Czecho-Slovakia. Filed Nov. 6, 1920. Serial No. 422,342. 6 Claims. (Cl. 83—30.)



1. A machine for shelling, polishing and the like treatment of grain and the like, comprising a plurality of shelling chambers adapted to be traversed in succession by the material to be shelled, the several shelling chambers being normally shut-off from one another, means for establishing communication between any two chambers temporarily during the working, so that they can run full at the same time during one and the same working period.

1,375,593. BARREL-STAND. JONAS J. KAUFMAN, Pretty Prairie, Kans. Filed Dec. 22, 1920. Serial No. 432,553. 3 Claims. (Cl. 280—53.)

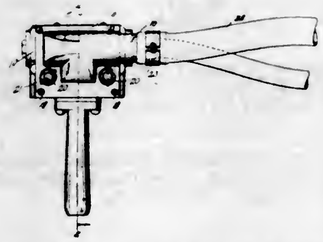


1. In a support of the class described comprising a cradle or frame having longitudinally extending angle bars, flat, transversely, curved braces connecting said bars, caster supported legs rigidly secured to the inner sides of the angle bars, curved arms integral with said supporting legs and attached to the sides of the angle bars, resilient bracing means secured to the upper terminals of the curved arms and normally bearing against the body being transported, and legs pivoted to the inner sides of the said angle bars for supporting the front part of the frame.

1,375,594. AUTOMOBILE-FENDER BRACE. JAKE J. KUNTZ, Oakville, Iowa. Filed July 24, 1920. Serial No. 398,630. 2 Claims. (Cl. 280—163.)

2. A fender brace comprising two metallic sections having lower lapped and connected portions and also having inner and outer arms and upstanding portions on the arms to receive chassis bars between them and also having between the horizontal portions and the outer arms horizontally disposed loops to support fender portions.

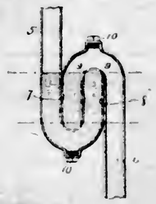
1,375,595. BLOWER FOR VENTILATING SYSTEMS. ANTOINE LAMONTAGNE, Montreal, Quebec, Canada. Filed May 24, 1920. Serial No. 383,741. 6 Claims. (Cl. 230—11.)



1. In apparatus of the class described, a blower casing of generally cylindrical contour formed of sections, a rotatable blower disposed in said casing and having blades mounted thereon, one of said sections formed with air

inlet ports, valves controlling said ports, a disk interposed between said casing sections, a plate disposed in front of said blades, said blades having their planes disposed at right angles to the plane of rotation, and means for mounting said blades upon said blower.

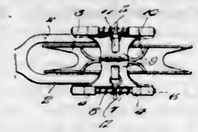
1,375,596. MANUFACTURE OF PERBORATES. JOHANN KONRAD LANGHARD, Fredriksstad, Norway, assignor to Fredriksstad Elektrokemiske Fabriker A/S., Fredriksstad, Norway. Filed Feb. 6, 1920. Serial No. 356,651. 5 Claims. (Cl. 204—9.)



1. Process for the production of perborate by electrolysis of a borate solution comprising the steps of subjecting the borate solution to electrolysis in the presence of a cyanogen compound.

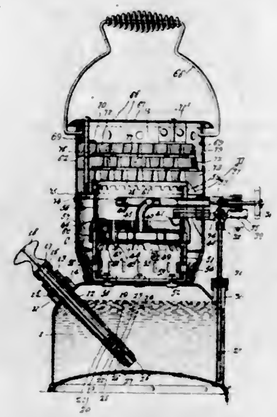
1,375,597. ATTACHMENT FOR HAT-CLIPPING MACHINES. JACK S. LEIBOWITZ, Brooklyn, N. Y. Filed July 8, 1920. Serial No. 394,718. 1 Claim. (Cl. 223—30.)

In a hat clipping machine including a housing and a rotary knife mounted therein, of a hood adapted to cover the open side of said housing, said hood comprising a flat base having openings therein for the accommodation of the adjusting elements of the machine, a hollow crown formed integrally therewith, and a nipple establishing communication from the crown to the exterior, said nipple adapted to be associated with a suction hose for exerting a suction on all sides of the cutting knife to effect the removal of the clipping therefrom.



1,375,598. SANITARY TRAP. NORRIS C. LEONARD, Baltimore, Md. Filed July 13, 1920. Serial No. 395,842. 2 Claims. (Cl. 182—12.)

1. A sanitary trap composed of two U-sections each having one long and one short member, one of said sections being inverted and each having the free end of its shorter member in open communication with the bend of its companion section.



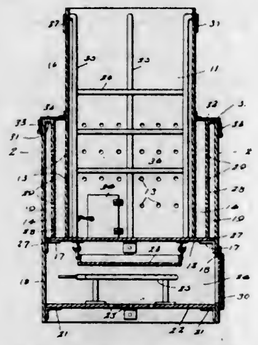
1,375,599. TROLLEY-WIRE HOLDER. FRANK MADRAK, Duryea, Pa. Filed May 2, 1918. Serial No. 232,073. 1 Claim. (Cl. 191—80.)

In combination with a trolley head having a flanged wheel mounted for rotation therein; of spring actuated wings hingedly connected with said head, said wings having enlarged inwardly curved portions to meet each other over the wheel and provide pockets facing toward the wheel, the ends of the curved portions of the wings

being bent outwardly toward and in proximity to the flanges of the wheel to prevent displacement of the trolley wire therefrom.

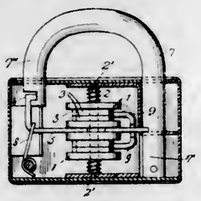
1,375,600. OIL-STOVE. ALEXANDER MICLAUSH, Cleveland, Ohio. Filed July 2, 1920. Serial No. 393,718. 11 Claims. (Cl. 126—95.)

1. An improved oil stove comprising a stove casing having air admission openings, a fire pot within the casing also having air ports, a partially rotatable liner within the fire pot also having ports adapted to register with the ports of the fire pot, a burner supported within the fire pot and having air passages therethrough, and means for supplying said burner with fuel, substantially as described.



1,375,601. PROPELLING DEVICE FOR USE ON VEHICLES, MARINE VESSELS, OR AIRCRAFT. ERNEST MORIZE, Boulogne-sur-Seine, France. Filed Mar. 27, 1919. Serial No. 285,629. 1 Claim. (Cl. 115—13.)

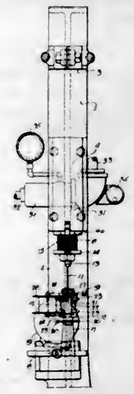
A propelling device of the character described comprising a comparatively large ejector tube traversed by a Venturi bore adapted to have its front and rear ends directly placed in communication with the exterior medium in which the tube is placed, said mediun having free passage therethrough, the restricted portion of the Venturi bore being situated in the forward part of the bore of the tube, such tube being slotted near the forward restricted portion thereof, a series of progressively larger injector tubes situated within the slotted end of said ejector tube, said injector tubes having their wider ends disposed forwardly and their restricted ends rearwardly and situated within the wider forward ends of adjacent injector tubes, the openings between adjacent injector tubes being in free communication with the exterior



medium, a combustion chamber located forwardly of the first injector tube and having a nozzle projecting into the larger forward end of such first tube, means to supply a fuel to said combustion chamber, and means to also supply a supporting fluid thereto, substantially as described.

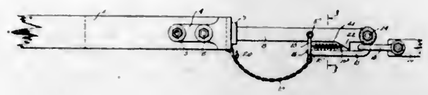
1,375,602. SALT-VAPOR CABINET. HARRY JOSEPH NULLETT, Memphis, Tenn. Filed Apr. 2, 1920. Serial No. 370,730. 3 Claims. (Cl. 4—13.)

1. A vapor cabinet, including an occupant compartment, having an open front and an open top, a door closing the front, a curtain for closing the top, vapor generating means below the compartment, medicament holding compartments disposed against the sides and back of the occupant compartment and having perforate communications therewith, and vapor compartments positioned against the medicament compartments having perforated communications therewith and with the vapor generating means.



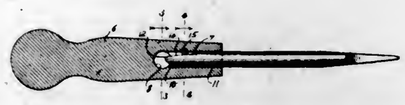
1,375,603. PERMUTATION-PADLOCK. VILHELM ÖHRSTRÖM, Stockholm, Sweden, assignor to Aktiebolaget Laurin & Perkel, Stockholm, Sweden, a Firm. Filed Sept. 23, 1920. Serial No. 412,346. 4 Claims. (Cl. 70—113.)

1. A permutation lock comprising a casing, a U-shaped shackle having its opposite ends projecting within said casing, a central shaft, a plurality of tumblers arranged in pairs and flexibly supported upon said shaft, a segmental disk formed with one face of each tumbler, a locking bolt arranged between each pair of tumblers, arms projecting from said locking bolt and adapted to rest against the peripheries of said segmental disks, a spring for holding said locking bolt in one position, and said disks adapted to hold said locking bolt into engagement with the opposite ends of said shackle, substantially as and for the purpose specified.



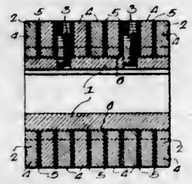
1,375,604. HAMMER-TESTING MACHINE. TINIUS OLSEN, Philadelphia, Pa., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 16, 1919. Serial No. 345,198. 11 Claims. (Cl. 265—2.)

1. The combination in a machine for testing pneumatic tools of a frame for supporting such a tool and including an abutment; a spring mounted between said abutment and the actuated member of the tool; means for pressing



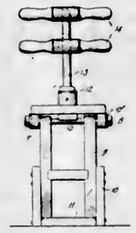
the tool toward the spring; a stylus; means for causing the stylus to be actuated by operation of the tool; and means for recording the movement of the stylus.

1,375,605. AUTOMATIC RELEASE. ELISHA DAVID PEPPER, Pickens, Miss. Filed June 5, 1920. Serial No. 386,805. 4 Claims. (Cl. 213—67.)



1. A device of the character stated, comprsing a beam, a drawbar movably connected to the beam and projecting forwardly therefrom, a spring engaging the drawbar and offering elastic resistance to the independent forward movement thereof, a rearwardly projecting coupling member pivotally connected at its forward end to the drawbar, a stirrup pivotally connected to the drawbar and normally engaging the free rear end of the coupling member holding the same in operative position, and a normally slack flexible connecting device connecting the stirrup and beam and adapted upon continued forward movement of the drawbar after the connecting device is taut, to cause a release of the stirrup from the coupling member.

1,375,606. SCREWDRIVER. JOHN PEYER, Brooklyn, N. Y. Filed Sept. 18, 1919. Serial No. 324,435. 1 Claim. (Cl. 279—97.)



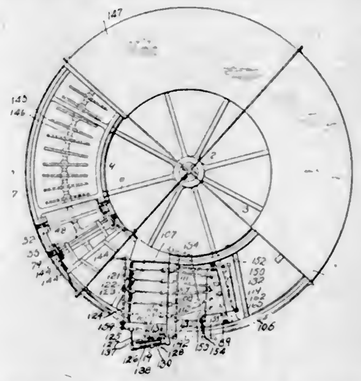
The combination with a tool provided with a shank having the inner extremity thereof formed respectively with tapered and beveled surfaces, of a handle for detachable association therewith, said handle having a longitudinal bore and a transverse bore communicating with the inner extremity thereof, a transverse beveled rib formed across one wall of said longitudinal bore adjacent its juncture with the transverse bore, said rib adapted to engage the bevel surface of the shank, and a pin extending transversely through said handle and having a portion of its periphery disposed within the bore of the wall opposite to the rib whereby upon insertion of the tool in the handle, a frictional binding of the inner extremity of said shank will be effected through the engagement of the beveled surface with the beveled rib and the tapered surface with the periphery of the pin.

1,375,607. PULLEY. HAROLD E. PRINTZ, Reading, Pa., assignor to Reading Wood Pulley Company, Reading, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1920. Serial No. 374,048. 7 Claims. (Cl. 64—17.)

1. A pulley having a belt engaging portion consisting of alternated layers of hard and soft wood.

1,375,608. TOY. EMMA CHARLOTTE RICHARDSON, Ridgefield Park, N. J. Filed June 9, 1920. Serial No. 387,564. 2 Claims. (Cl. 46—22.)

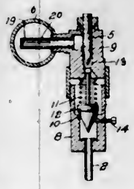
2. A see-saw including a board, a standard, a bolt attached to said board and standard and affording pivotal connection between its members, a pole having its lower end secured to said board and two pairs of handles arranged one above the other and secured to and at the upper end of said pole.



1,375,609. APPARATUS FOR MAKING ICE-CREAM CONES. WEBSTER M. ROBERTS and PARK D. ROBERTS, St. Joseph, Mo. Filed June 24, 1912. Serial No. 705,584. Renewed Sept. 10, 1919. Serial No. 322,980. 52 Claims. (Cl. 107—58.)

1. A cone making machine comprising sectional molds adapted for travel in a fixed path, means for supplying material to the mold cups, plungers adapted for automatic projection into the cups, means for opening the molds and separate means for removing the plungers, and means for stripping finished cones from the plungers.

46. In a cone baking machine, a carrier rotatably mounted about a vertical axis, a plurality of molds supported by said carrier, core supports on said carrier, cores mounted on said supports and movable into and out of said molds in downward and upward directions, respectively, while maintaining their axes in vertical position, means operative to cause movement of said cores, and means for heating said molds and cores.



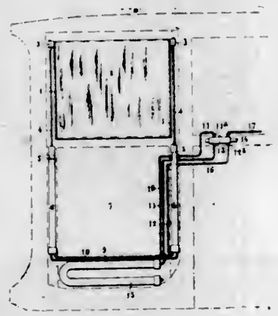
50. A cone making machine, a traveling support, sectional molds movable thereby, a corresponding plurality of cores therefor, a core bar for supporting the cores, and means for automatically separating the mold sections and also separating said core bar and molds while maintaining the same in parallel relation with each other.

52. In a cone making machine, the combination, of baking molds formed in separate sections, and means coacting with said sections to open and close them in parallel relation one section with the other, forming cores adapted to be inserted and withdrawn in and from said molds, means for ejecting cones formed thereby through and be-

tween said mold sections and means to maintain said forming cores in parallelism with said mold sections, whereby the three elements, each mold section and the forming cores will move to and from each other and be held in operative position in parallel relation to each other.

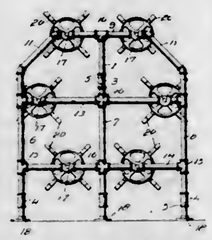
1,375,610. MECHANISM FOR CONTROLLING THE ADMISSION OF AIR AND GASOLENE TO EXPLOSIVE-ENGINES. AUGUSTUS F. SCHMIDT, Pittsburgh, Pa., assignor to John H. Roney, trustee, Pittsburgh, Pa. Original application filed May 26, 1913, Serial No. 769,794. Divided and this application filed Sept. 11, 1916. Serial No. 119,406. 8 Claims. (Cl. 123—98.)

1. In a mechanism for controlling the admission of air and gasolene mixture to the cylinders of an explosive engine, the combination of a throttle valve and valve mechanism interposed between the throttle valve of the carbureter and the inlet to the cylinders, adapted to be operated simultaneously with the throttle valve, to be opened by vacuum and closed by a spring when said vacuum decreases, for the purpose of admitting a regulated amount of air with the gasolene mixture and of shutting off air, dependent upon the varying speeds of the motor.



1,375,611. ROBE-HOLDER FOR AUTOMOBILES. REINHOLD SCHOELL, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Nov. 3, 1919. Serial No. 335,372. 6 Claims. (Cl. 45—13.)

6. In a safety robe holder, the combination with a robe rail, clamping bar and hollow brackets for supporting the rail and bar, of friction clutches located in the hollow



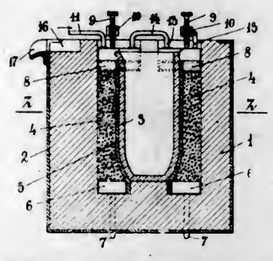
brackets and adapted to automatically lock the clamping bar in any desired adjustment, and key lock actuated mechanism located in the hollow brackets and rail for actuating the clutches to unlock and release the clamping bar.

1,375,612. DEVICE FOR CONTROLLING FROM A DISTANCE THE WINDOWS OF MOTOR-CARS AND OTHER VEHICLES. PIERRE SEURIN, Paris, France. Filed Jan. 25, 1921. Serial No. 439,862. 2 Claims. (Cl. 268—4.)

1. In a device for operating windows of cars and other vehicles, the combination with the window sash, of two vertical cylinders on opposite sides of the window, a piston in each cylinder and having their piston rods connected with the window sash, a valve casing having a port open to the atmosphere, two tubes connecting the lower ends of the cylinders and each having a branch connected with the valve casing, an air pressure tank, a tube leading from the air pressure tank to the valve casing, and a valve in the casing for establishing communication between the tube of the air pressure tank and the branch of one tube connecting the cylinders and establishing communication between the branch of the other cylinder connecting tube and the port of the valve casing open to the atmosphere.

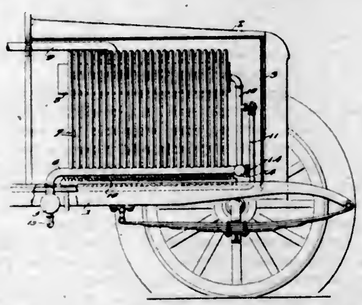
1,375,613. REEL-FLY RACK. CHARLES P. SHOEMAKER, Wilkes-Barre, Pa. Filed Aug. 12, 1920. Serial No. 403,070. 1 Claim. (Cl. 242—106.)

A reel fly rack comprising connected end members, each composed of two outer and an intermediatee upright, the latter being higher than the former, spaced cross bars connecting said uprights, and each having reel fly receiving bearings, the top cross bar being shorter than the others and inclined bars connecting the outer uprights with said top cross bar.



1,375,614. BABY-CARRIAGE. GEORGE H. SMITH, Newport, R. I. Filed Aug. 18, 1920. Serial No. 404,423. 4 Claims. (Cl. 280—31.)

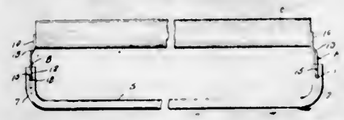
3. In a baby carriage, a pair of longitudinal frame bars supported on the rear axles of the carriage, a pair of springs of general S-shape carried by the forward ends of the longitudinal frame bars, the forward end of the body portion of said vehicle having pivotal mounting in said springs, transversely positioned split clamping members around the rear ends of the frame bars, upwardly



extending pins carried by the clamping members, nuts loosely mounted on the pins, coiled springs around the pins between the nuts and the clamping members, perforated angle brackets secured to the rear end of the body portion receiving the pins and supported on the nuts.

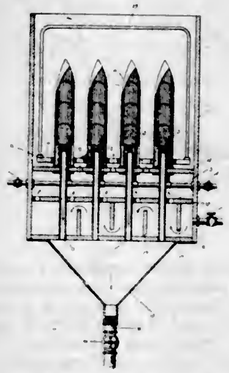
1,375,615. ELECTRIC FURNACE. CESARE SONCINI, Pont St. Martin, Italy. Filed Apr. 12, 1920. Serial No. 373,204. 6 Claims. (Cl. 204—64.)

1. An electric furnace, comprising a body of refractory material having a crucible-receiving space therein, and also having a plurality of chambers independent from each other arranged around said space; a filling of resistance material in said chambers to form heating resistances; members feeding the electric current to the ends of said resistances; and means for connecting said members with each other and with the current-feeding means.



1,375,616. STEAM-BOILER. SWAN F. SWANSON, Pueblo, Colo. Filed June 12, 1919. Serial No. 303,563. 4 Claims. (Cl. 122—333.)

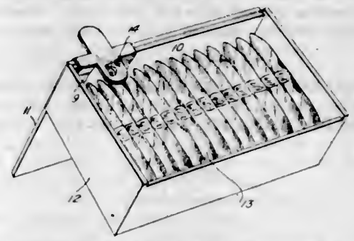
1. A steam boiler including with a water distributing manifold, a plurality of primary water manifolds each connected at one end with said distributing manifold and



extending in parallel relation in a horizontal plane, a mud drum to which the remaining end of each of said primary manifolds is connected, a dry steam drum disposed above and parallel with said primary manifolds, and a plurality of water tubes associated with each of said primary manifolds extending vertically upwardly therefrom and each curved over at its upper end to connect with said steam drum.

1,375,617. CURTAIN-POLE BRACKET. HOWARD A. TONGUETT, Marion, Ohio, assignor of one-half to Justice H. Uncapher, Marion, Ohio. Filed July 15, 1919. Serial No. 310,944. 2 Claims. (Cl. 156—19.)

2. As a new article of manufacture, a curtain pole bracket formed of a single blank and comprising a body plate having an offset portion adapted to be secured to a window frame, a central forwardly extended and upwardly curved supporting arm projecting from the outer edge of said body plate for engagement in the end of a curtain pole to support the same, an upper locking arm extended parallel with the main portion of the central arm and terminating in a downwardly extended locking end for engagement through an opening in the upper face of the curtain pole supported on the first mentioned arm, the locking end having a beveled inner wall, and a stop shoulder formed beneath the first mentioned arm to receive the end of the lower wall of the curtain pole and retain the curtain pole against movement on the first mentioned arm and the locking arm of the bracket.

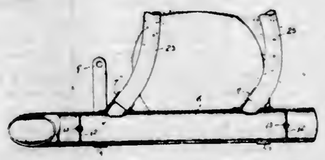


1,375,618. ENVELOP-MACHINE. TOSAKICHI UMEDA, Tennoji-Mura, Japan. Filed July 16, 1919. Serial No. 311,343. 7 Claims. (Cl. 92—57.)

1. In an apparatus of the kind herein referred to for making seamless envelops, two or more horizontal partitions in the lower part of the vat, perforations out of register with each other in the said partitions, and baffles in the path of the pulp admitted beneath the lower or lowest partition, for the purpose set forth.

1,375,619. EXHIBITING DEVICE. SAMUEL C. VAUGHN, Charlotte, N. C. Filed Oct. 7, 1919. Serial No. 329,173. 2 Claims. (Cl. 217—61.)

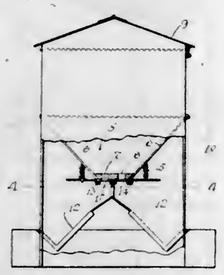
1. A means for holding the lid of a box against the back thereof to exhibit the contents of the box; comprising a flat body strip having a price mark imprinted adjacent one of the edges thereof and its opposite edge designed to provide a finger hold, said body having central reduced lateral extensions, resilient tongues formed on the edges of said extensions, and depending therefrom to provide



inner and outer coöperating pairs of gripping elements to the opposite sides of the body and for engaging the back and the cover of the box, and the inner pair of gripping elements having their free ends formed with lips that are projected toward the outer pair of said elements.

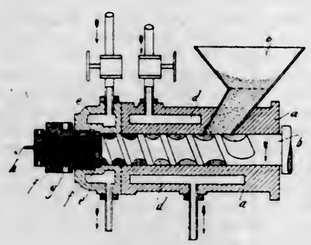
1,375,620. STOVE-DOOR. THOMAS R. WILSON, Driggs, Idaho. Filed July 15, 1919, Serial No. 310,880. Renewed Feb. 26, 1921. Serial No. 448,040. 1 Claim. (Cl. 126—190.)

In combination with a heating device having a fuel opening, a door hinged for horizontal swinging and for closing the upper part of the opening, a chute hinged for vertical swinging for closing the lower part of the opening, means for limiting the outward swinging of the chute for retaining the same at an inclination with respect to the heating device, said chute including sides provided at their upper corners with tapered extensions, and the said chute having an outstanding lip upon its upper edge conforming with the extensions, pockets for the reception of the lower edge of the door, whereby when the said edge of the door is received therein and the door and chute closed, the opening of the door will influence the chute to an open position.



1,375,621. GAS-ENGINE CUT-OUT MUFFLER. HAMILTON MERCER WRIGHT, Jr., New Rochelle, N. Y. Filed June 28, 1919. Serial No. 307,363. 6 Claims. (Cl. 137—160.)

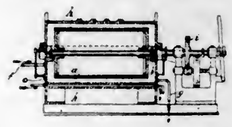
6. A combination internal combustion motor cut-out and a muffler comprising; a muffler tube having unrestrict-



ed openings at each end, a butterfly valve pivotally confined in the muffled tube adjacent each open end, a crank or foot piece attached to each butterfly valve to open and close same, a link connecting the two foot pieces so that both valves may be simultaneously opened or closed by manipulating one of the foot pieces, and a coil compression spring related with the foot piece to exert pressure on the buterfly valve to hold it in set position.

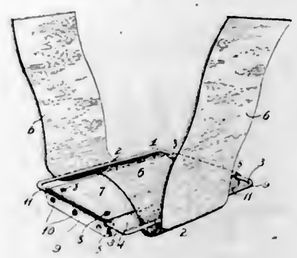
1,375,622. ANIMAL-CONTROLLED FEEDER. WILLIAM H. ABTS, Belden, Nebr. Filed Aug. 8, 1919. Serial No. 316,106. 2 Claims. (Cl. 119—54.)

1. The combination with a hopper having an outlet in the bottom thereof, of a rod mounted for rotation on said bottom, a plate secured thereto and constituting a valve for closing the outlet, oppositely extending end portions of the rod projecting laterally from the axis of rotation of the rod, and a spring connected to one of said end portions for holding the plate or valve in closed position across the outlet, the other end of the rod constituting means to be lifted by the snout of an animal to open the valve.



1,375,623. APPARATUS FOR THE MANUFACTURE OF HORN-LIKE MASSES FROM CASEIN. AMANDUS BARTELS, Harburg-on-the-Elbe, Germany. Filed Feb. 16, 1916, Serial No. 78,628. Renewed Apr. 22, 1920. Serial No. 375,910. 2 Claims. (Cl. 18—12.)

1. In an apparatus for manufacturing horn-like masses from casein, the combination of a casing formed with a bore, a screw operating in the bore, the threads of the screw being formed to compress the casein as same approaches the end of the bore, means for feeding casein to the threads of the screw, a cooling jacket surrounding the casing and a portion of the bore to cool the casein while being fed forward, an extension on the casing having a tapered bore which communicates with the first mentioned bore, a heating chamber surrounding a part of the bore in the extension and a part of the screw whereby to heat the compressed casein.

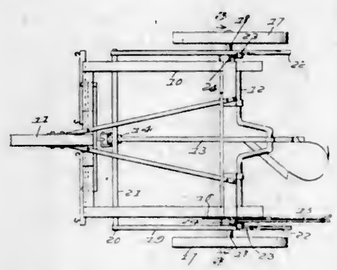


2. In an apparatus for manufacturing horn-like masses from casein, the combination of a casing formed with a uniform bore, a screw in the bore, the threads of the screw gradually decreasing toward one end, an extension on the casing, said extension having a tapered chamber which communicates with the bore in the casing, a sieve in said chamber which with the screw serves to knead the casein, and means for heating the casein while same is being kneaded.

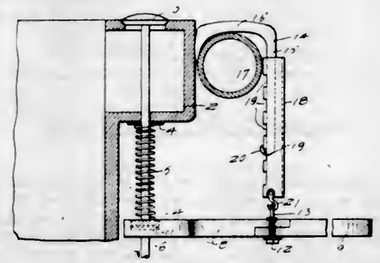
1,375,624. APPARATUS FOR THE MANUFACTURE OF TRANSPARENT HORN-LIKE CASEIN MASSES. AMANDUS BARTELS, Harburg-on-the-Elbe, Germany. Filed Feb. 16, 1916, Serial No. 78,629. Renewed Apr. 22, 1920. Serial No. 375,911. 2 Claims. (Cl. 87—6.)

1. In an apparatus for manufacturing transparent horn-like casein, the combination of a closed receptacle divided horizontally to form a removable upper portion and a stationary lower potrion, the stationary lower portion being hollow to provide a chamber for heating or cooling the interior of the receptacle, inwardly extended alined bearings on the inside of the receptacle, a shaft mounted adjacent one of the bearings, means for rotating the shaft, a perforated drum, a shaft on which the perforated drum is mounted, said latter shaft being extended beyond the ends of the drum and supported in the bearings, a coupling between one end of the last mentioned shaft and the first mentioned shaft whereby to permit the removal of the drum when the cover is removed from the receptacle, and elongated cups on the drum to lift liquid contained in the receptacle to percolate through the perforations and treat casein contained in said drum.

1,375,625. SHOE-SHINING DEVICE. MAX BLOOMSTEIN, Nashville, Tenn. Filed Sept. 23, 1920. Serial No. 412,179. 2 Claims. (Cl. 15—58.)



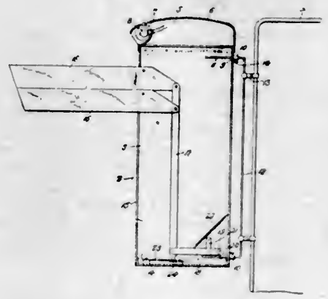
2. A shoe shining device, comprising a rectangular wire frame, a wooden block narrower than the rectangular wire frame, the said block being notched at its ends and extending from end to end of said wire frame and depending below the plane thereof, and a sheet metal facing plate secured upon said wooden block and having flanges embracing the end members of the wire frame and secured to the ends of said wooden block.



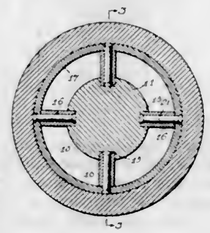
1,375,626. SIDEHILL-PLOW. GRANT CARPENTER, Eldred, Pa. Filed Sept. 5, 1919. Serial No. 321,822. 1 Claim. (Cl. 97—36.)

A plow of the kind indicated consisting of a frame, rearwardly extending arms pivotally connected to the frame at their forward ends and provided adjacent their rear ends with laterally projecting stub axles, wheels mounted upon said stub axles, the rear extremities of said arms being formed to provide handles, segmental racks mounted on opposite sides of the frame adjacent said arms, latches

carried by said arms and engageable with said racks, whereby the relative positions of the wheels may be varied vertically to support the frame in a horizontal plane when the machine is on an incline, and a plow carried by the frame.

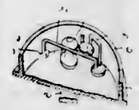


1,375,627. VALVE-LIFTER. REUBEN CHANEY, Fort Worth, Tex. Filed Apr. 8, 1920. Serial No. 372,328. 1 Claim. (Cl. 29—86.3.)



A valve lifter comprising a tool adapted to grip the plate of a valve, a casing detachably and pivotally connected to the tool and having spaced slots, a shank slidable in said casing, a projection on said shank and adapted to receive either of the slots to adjust the shank in relation to said casing, and a hook formed on said shank.

1,375,628. DIRECTION INDICATOR OR SIGNAL FOR MOTOR-VEHICLES AND THE LIKE. JAY C. COLBURN, Webster City, Iowa. Filed Jan. 14, 1919. Serial No. 271,023. 1 Claim. (Cl. 116—41.)

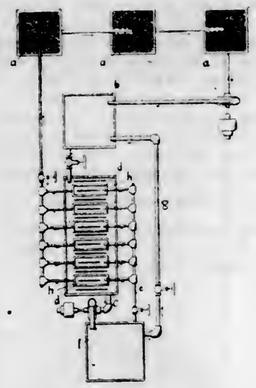


In a device of the class described, a casing having a vertical slot in one wall thereof, a signal arm pivoted within said casing and adapted to be moved through said slot, a vertically disposed rod with which one end of the arm is pivotally connected, a rock shaft journaled within the casing, a link connecting the shaft with the lower extremity of said rod, whereby said blade may be projected from the casing when said rod is lowered, a latch element projecting from one side of the casing and disposed adjacent the length, and designed to engage the latter to hold the arm projected, said rock shaft projecting an appreciable distance beyond one wall of the casing, said shaft being susceptible of horizontal sliding adjustment, a coil spring surrounding said projected portion of the shaft having one end bearing against the casing, a knob on one end of the shaft to engage with the spring whereby the spring holds said shaft in a position whereby the latch engages the link, said shaft adapted to be moved against the tension of the spring to separate the link from the latch, and a spring connecting the link and one wall of the casing whereby the parts are automatically returned to normal position when released from the latch.

1,375,629. INKING-ROLLER. AUGUSTUS R. COLGIN, New York, N. Y. Filed Oct. 28, 1920. Serial No. 420,158. 2 Claims. (Cl. 91—67.8.)

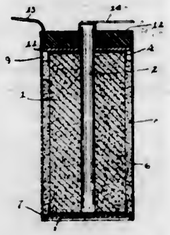
1. An inking roller, comprising a spindle provided with reduced journals at the ends and having longitudinal grooves intermediate the journals, supporting bars fitting the said grooves and projecting from the peripheral face of the spindle, and a shell attached to the said bars and concentric with the said spindle.

1,375,630. DRUM-HANDLE FOR TAPE-LINE REELS. CHARLES W. CROGAN, Bangor, Me. Filed July 10, 1919. Serial No. 309,946. Renewed Mar. 1, 1921. Serial No. 448,866. 6 Claims. (Cl. 242—84.8.)



1. The combination with the winding drum and pivoted handle of a tape line reel, said handle including a knob having an enlarged terminal, a U-shaped spring coacting with said enlarged terminal of the knob, one end of said spring being soldered to the flange of said drum and its opposite end to a push button, an auxiliary U-shaped spring having one end thereof also soldered to the flange of the drum, rearwardly of the said terminal and its opposite end soldered to said push button to assist the first mentioned U-shaped spring in releasing the knob when pressure is applied to the push button.

1,375,631. PROCESS OF SEPARATING AND REFINING METALS. GUSTAF HAGLUND, Falun, Sweden. Filed Dec. 5, 1918. Serial No. 265,383. 9 Claims. (Cl. 204—14.)



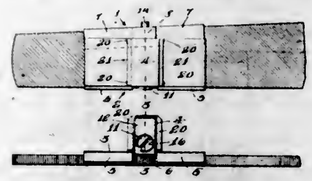
1. In the separating and refining of metals the process of recovering copper and another metal from material in

granular form containing the same, which comprises subjecting the same material to the action of an acid solution whereby the copper and the other metal are dissolved and a neutral solution formed, continuing the treatment after the formation of the said solution until the copper

is cemented out by the other metal and a pure solution of the last named metal is formed, and recovering the said metal from the last named solution by subjecting the solution to electrolysis whereby the said metal is deposited on the cathode in refined condition.

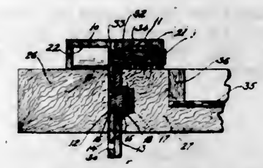
1,375,632. DRY CELL. CARL HAMBUECHEN, Belleville, Ill., assignor to National Carbon Company, Inc., a Corporation of New York. Filed June 15, 1918. Serial No. 240,216. 6 Claims. (Cl. 204—29.)

4. A dry cell comprising, in combination, a container electrode, an electrode therein comprising an unwrapped molded mass, means at the opposite ends of said mass for protecting the same against dislodgment of particles thereof, and flour paste or the like between said electrodes and contacting directly with the unwrapped or bare surface of said mass between such protecting means.



1,375,633. NAIL. HARRY D. HAMILTON, Winthrop, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 9, 1920. Serial No. 409,127. 5 Claims. (Cl. 85—10.)

1. A nail for attaching rubber heels to shoes, comprising in combination, a shank having a tapering portion terminating in a clenching point disposed concentrically of the shank and an enlarged head disposed concentrically of the shank and having a filleted junction with the shank, the upper surface of said head being cupped over substantially its entire area and having a curvature so arranged rela-

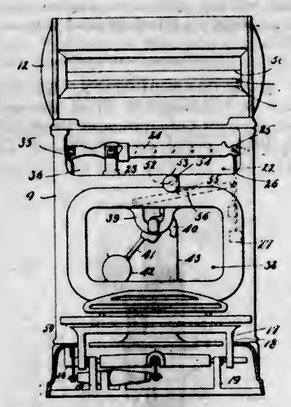


tively to the said filleted junction as to provide the maximum thickness of the head adjacent to the shank of the nail.

1,375,634. SUPPLEMENTAL HANDLE FOR FILES. JOHN O. HANIGAN, Syracuse, N. Y. Filed Mar. 3, 1920. Serial No. 362,066. 9 Claims. (Cl. 29—80.)

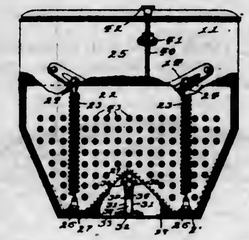
1. A supplemental handle for files comprising opposing clamping pieces for engaging opposite sides of the file, one having a projecting chambered portion serving as a handle, and the other having a complemental projecting portion extending into said raised portion of the former piece, and means for clamping said pieces toward each other, substantially as and for the purpose described.

1,375,635. HINGE. CLAES J. JOHNSON and GEORGE A. JACOBS, Chicago, Ill. Filed Mar. 1, 1920. Serial No. 362,300. 8 Claims. (Cl. 16—111.)



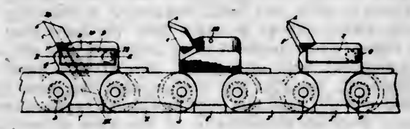
2. A half hinge having, in combination, a plane portion positioned in abutment with the edge of a structural member and another portion extending partly in a plane at right angles to the first portion in abutment with the exposed face of the structural member, said last mentioned portion being bulged out to define a casing bounded by end walls lying substantially in planes parallel to the plane of the first portion and by a curved wall joining the edges of the end walls, said casing opening against the face of the structural element.

1,375,636. SCALE. LEONARD T. JOHNSON, Boston, Mass. Filed Feb. 17, 1919. Serial No. 277,525. 6 Claims. (Cl. 265—62.)



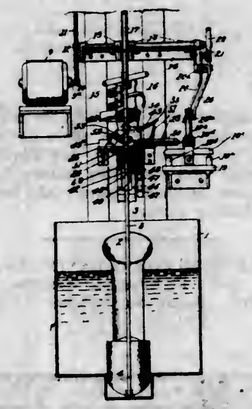
1. The combination of an indicator, of a pivoted lever operatively connected thereto, a tare beam, a second lever

arranged beneath and substantially parallel to said first lever, connecting means for coupling the levers together,



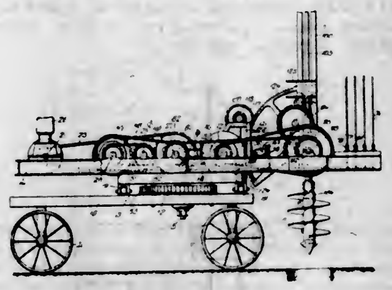
and means for operating the tare beam by the first lever through the medium of the second lever.

1,375,637. WASHING-MACHINE. PETER J. KASDA, Oklahoma, Okla. Filed Nov. 24, 1919. Serial No. 340,242. 2 Claims. (Cl. 68—21.)



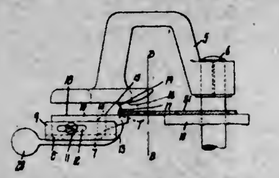
1. In a washing machine, an oscillatory container, a perforated cage relatively movable therein and having a bottom raised along a longitudinal line, a depending locking member in the crotch thus formed, and upstanding resilient means for engagement with said locking member.

1,375,638. CUTTING-CHAIN. CHARLES J. KIENZLE, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed May 3, 1920. Serial No. 378,517. 3 Claims. (Cl. 262—33.)



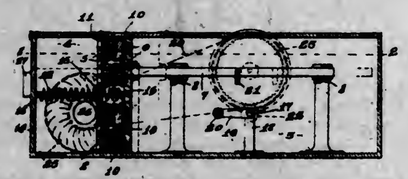
3. In a cutter chain for mining machines, the combination with a block link having a transversely extending aperture, a cutter bit longitudinally movable in said aperture, a plurality of transversely notches formed in the cutter bit, and automatically acting means coöperating with said notches to prevent longitudinal movement of the cutter bit as and for the purpose set forth.

1,375,639. LIQUID-VENDING APPARATUS AND COIN-ACTUATED MECHANISM. SOREN MADSEN, New York, N. Y. Filed Dec. 4, 1916. Serial No. 134,804. 5 Claims. (Cl. 194—77.)



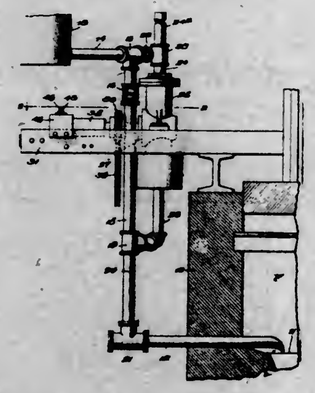
1. Vending apparatus embodying delivery mechanism, a coin-guide having a coin slot, a coin-carrying slide having a coin-receiving slot normally registering with the slot in the coin-guide, said slide being movable laterally of said coin-guide to carry the coin edgewise out of and back into registry therewith, a coin stop carried by said slide and movable into and out of registry with the slot in the coin guide, and an arm carried by said slide to actuate the said delivery mechanism.

1,375,640. EARTH-BORING MACHINE. WILLIAM E. MOORE, Chicago, Ill., assignor, by mesne assignments, to International Earth Boring Machine Corporation, a Corporation of Delaware. Filed Sept. 7, 1918. Serial No. 252,994. 15 Claims. (Cl. 255—22)



1. An earth boring machine including in combination a main frame, a supporting frame rotatably mounted thereon, an auger tower mounted near one end of said supporting frame, means for rotating said supporting frame relative to said main frame, said auger tower being pivotally mounted with raference to said supporting frame, the pivotal mounting including a trunnion on one side and a driving shaft on the other side, means for actuating said driving shaft, an auger mounted in said auger tower and having operative connection with said driving shaft, and means for tilting said auger tower.

1,375,641. GAGE FOR POSITIONING SHEET MATERIAL. AUSTIN D. RHODES, Waltham, Mass., assignor to American Lacing Hook Co., a Corporation of New Jersey. Original application filed July 29, 1918, Serial No. 247,116. Divided and this application filed Nov. 20, 1919. Serial No. 341,535. 9 Claims. (Cl. 218—17.2.)

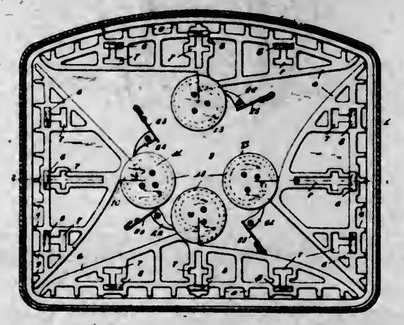


1. A work-support and a gage movably mounted thereon and adapted normally to project above the work contacting surface of said work-support, and movable vertically relatively to said work contacting surface, the front edge of said gage being inclined upwardly and forwardly from said work-contacting surface.

1,375,642. MACHINE FOR CLEANING BLACKBOARD-ERASERS. JOHN K. RUSSELL, Waterloo, N. Y. Filed July 9, 1919. Serial No. 309,598. 1 Claim. (Cl. 15—25.)

A machine for cleaning erasers comprising a box having a perforated partition therein, a movable partition on one side of the perforated partition having means for attaching erasers thereto between said partitions, a spring tending to hold the movable partition against the perforated partition, means for moving the movable partition away from the perforated partition, and then releasing said partition and a fan for drawing the dust from the other side of the perforated partition, substantially as and for the purpose specified.

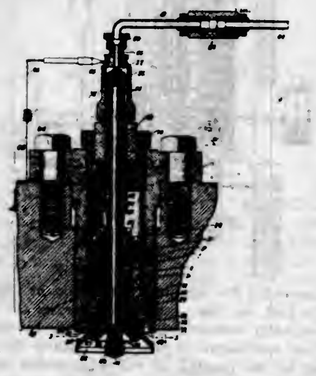
1,375,643. FEEDING APPARATUS. LEWIS BAILEY SKINNER, Denver, Colo. Filed Feb. 19, 1920. Serial No. 359,956. 9 Claims. (Cl. 23—1.)



7. Acid feeding appartaus comprising the combination, with a source of acid supply and a discharge pipe arranged at a lower level, of acid feeding means interposed at an intermediate level between said source of supply and said discharge pipe and comprising a conduit, a rotary feeding valve member seated in said conduit, means for continuously rotating said valve member, and means for constantly pressing it against its seat without interfering with rotation.

1,375,644. BEAM CONSTRUCTION. WALTER I. TUTTLE, Providence, R. I., assignor to Frank Mossberg Company, Attleboro, Mass., a Corporation of Rhode Island. Filed Aug. 10, 1918. Serial No. 249,227. 7 Claims. (Cl. 139—56.)

1. In beam construction, in combination, a barrel, a beam head, a pulley member provided with an inwardly extending flange secured to the inner portions of said beam head, a shaft, and means mounted upon said shaft and engaging said flange to hold said head against the end of said barrel.



1,375,645. DOOR-LOCK FOR OPEN-END VAULTS. CLARENCE F. UNCKRICH, Galion, Ohio. Filed Sept. 2, 1919. Serial No. 321,110. 2 Claims. (Cl. 292—5.)

1. In a metallic grave vault, a closure for the entrance of said vault, a flange rigidly carried by said vault contiguous to its entrance and against which said closure is arranged to seat, means for locking said closure in secured relationship with said seat, comprising a plurality of locking plates slidably mounted upon the inner face of said closure and capable of being projected into and out of engagement with said flange, circular cam members independently mounted for rotation upon the inner face of said closure, said cam members being provided with grooves disposed eccentrically to the axes of rotation thereof and with continuing grooves disposed concentrically to the axes of rotation, projections provided upon the inner ends of said plates and arranged to be received within said grooves, whereby upon the selective rotation of said cam members said plates may be projected into engagement with said flange, and inwardly projecting

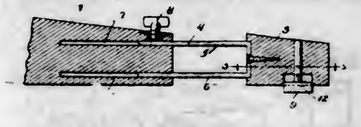
cam surfaces provided upon the inner vertical faces of said cam members contiguous to the concentrically arranged grooves, whereby after said plates have been projected into engagement with said flange by the eccentric grooves of said cam members, the inwardly projecting cam surfaces of said mmbers will engage with said plates to rock the latter laterally into firm frictional engagement with said flange.

1,375,646. ELECTRICAL VAPORIZER AND BURNER. NICHOLAS D. BELINSKI, New York, N. Y. Filed May 14, 1919. Serial No. 297,051. 9 Claims. (Cl. 158—31.)

1. An electric vaporizer and burner, comprising an electric circuit, circular electrodes in the said circuit and forming an annular spark gap and passage between them, and means normally closing the passage and dapted to be opened by the pressure of the fluid to allow the latter to flow through the passage and to be ignited by the annular spark.

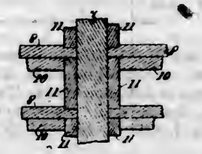
1,375,647. DEPOLARIZING BATTERY-ELECTRODE AND PROCESS OF MAKING SAME. RAYMOND C. BENNER and HARRY F. FRENCH, Fremont, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed Aug. 22, 1918. Serial No. 251,029. 3 Claims. (Cl. 204—29.)

2. The process of preparing a high voltage depolarizer for electric batteries, which consists in producing cuprous oxid by electrolysis, oxidizing the cuprous oxid to cupric oxid and adding sulfur.



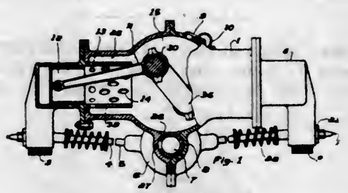
1,375,648. LUBRICATOR. HARRY O. BOYER, Proberta, Calif. Filed Nov. 26, 1919. Serial No. 340,910. 7 Claims. (Cl. 74—108.)

1. A lubricator for the wrist-pin of a piston comprising a lubricant reservoir, inclined walls covering said reservoir, and a passage through the bottom thereof.



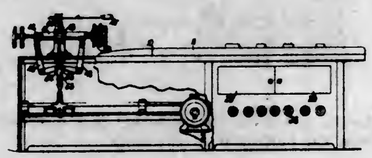
1,375,649. STRAIGHTEDGE. WALTER LYMAN CLARK, Boone, Iowa. Filed Dec. 29, 1919. Serial No. 347,904. 3 Claims. (Cl. 33—75.)

1. A straightedge comprising a body, a block for each end of the body, a member slidably connecting each member of the block with the body, a thumb screw for locking the block in adjusted position, and a plunger adjustably



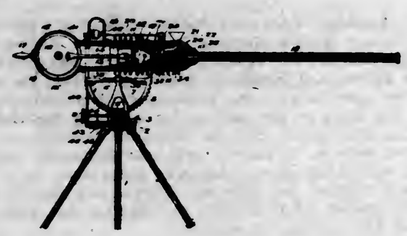
mounted in each block for movement in a direction opposite from the movement of the block.

1,375,650. FILING DEVICE. ALEXANDER C. BARNARD and WILLIAM O. BANKS, Oakland, Calif., assignors of one-third to Harry B. Tooker, San Francisco, Calif. Filed Apr. 6, 1920. Serial No. 371,630. 3 Claims. (Cl. 45—54.)



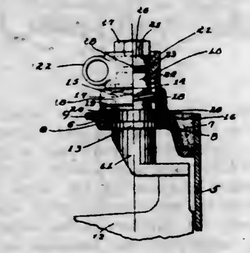
1. A cabinet of the class described, including a plurality of slidably movable shelves, interchangeable spacing and supporting means extending throughout the length of said shelves and capable of selectively varying the area of the space between the shelves, and detachable means on the front of the cabinet for confining the shelves within the cabinet with an unobstructive access to the spaces between the shelves, said interchangeable spacing and supporting means comprising strips made to be received between two adjacent shelves, said shelves and their spacing strips adapted to coöperate one with the other for spacing the shelves.

1,375,651. INTERNAL-COMBUSTION ENGINE. VERNON W. BALZER and JOHN MCK. BALLOU, Los Angeles, Calif., assignors to Western Aircraft Corporation, Inc., Los Angeles, Calif. Filed Mar. 17, 1920. Serial No. 366,520. 3 Claims. (Cl. 123—56.)



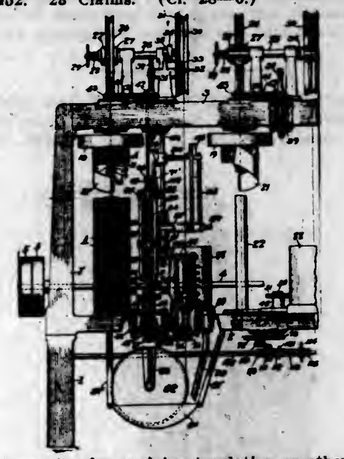
3. In an internal combustion engine, a crank case having an inlet port in its bottom side and having a longitudinal conduit alongside of the crank case, a crank shaft through the crank case practically parallel to the conduit in the case, cylinders disposed on the crank case projecting sidewise from the crank case at about right angles from the crank shaft, the cylinders having extension ends extending into the crank case, the extension ends of the cylinders having ports at a point within the crank case, pistons disposed in the cylinders so as to come below the ports in the extension ends of the cylinder when in their innermost position in relation to the crank case so that a gas mixture in the crank case can pass over into the cylinders above the pistons when in this position, and a hollow cam shaft disposed in and through the longitudinal conduit in the bottom of the crank case forming the manifold of the device.

1,375,652. THERAPEUTIC APPARATUS. JOSEPH J. CARLOTTI, New York, N. Y. Filed July 30, 1917. Serial No. 183,470. 11 Claims. (Cl. 128—51.)



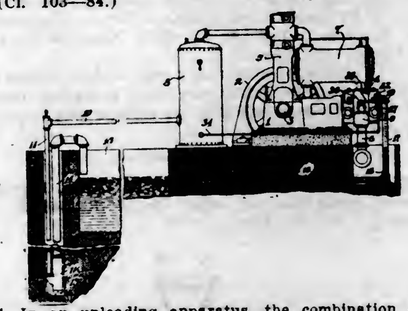
1. An apparatus comprising a support for a recumbent human figure; a plurality of yielding pads operatively disposed in said support, each of said pads having a plunger extending below said support; and a reciprocating mechanism for said plungers, said reciprocating mechanism embodying two series of cams arranged for operation of said pads.

1,375,653. MACHINE-GUN. ROBERT M. MCLAIN and WILLIAM M. QUICK, Huntsville, Ala., assignors, by direct and mesne assignments, to The Quick-McLain Machine Gun Company, a Corporation of Alabama. Filed June 1, 1917. Serial No. 172,253. 11 Claims. (Cl. 89—1.)



1. A gun comprising a barrel, an internal combustion engine having its explosive chamber opening into one end of the barrel, and projectile feeding instrumentalities operable automatically by the movement of the engine to supply projectiles successively to the barrel to be discharged through the barrel by explosions in the combustion chamber of the engine.

1,375,654. BINDING-POST FOR STORAGE BATTERIES. JOSEPH J. FLOOD, East Orange, N. J. Filed Apr. 3, 1920. Serial No. 370,915. 8 Claims. (Cl. 204—29.)

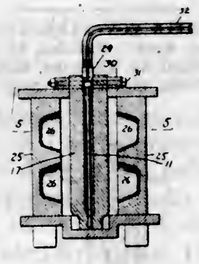


1. The combination with the cover of a storage battery having an opening and a rib within the opening, of a post to extend through the opening, said post having its upper portion screw-threaded, a rib carried by the post and engaging beneath the first named rib, a gasket arranged above and in contact with the first named rib, a post nut having interior screw-threads to engage with the first named screw-threads and engaging the gasket, and a thimble carried by the post and engaging the post nut to prevent improper turning thereof.

1,375,655. WIRE-COVERING MACHINE. JOHN ALLEN HEANY, New York, N. Y., assignor, by mesne assignments, to Rockbestos Products Corporation, a Corporation of Delaware. Filed Feb. 10, 1916. Serial No. 77,452. 23 Claims. (Cl. 28—6.)

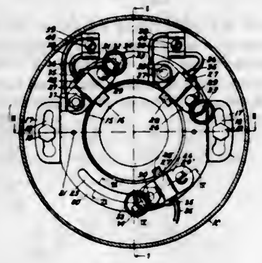
2. Apparatus for applying insulation or other covering to wires and the like, comprising means for moving the wire vertically downwardly, means for reversing the direction of movement of the wire, means for applying a covering to the portion of the wire which moves downwardly, means for applying an impregnating material to the covered wire during its reversal of movement, and ironing and smoothing means for acting upon the portion of the covered and impregnated wire which moves vertically upwardly.

1,375,656. COMPRESSOR-CONTROLLING MECHANISM. JOHN OLIPHANT, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 20, 1916, Serial No. 126,793. Renewed Aug. 13, 1920. Serial No. 403,299. 24 Claims. (Cl. 103—84.)



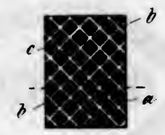
1. In an unloading apparatus, the combination comprising a compressor, a pump connected therewith, a reservoir receiving material from said pump, and means controlled by the level of the material in said reservoir for unloading said compressor.

21. In a pumping system, a source of fluid pressure, a plurality of pumping units, a reservoir for receiving the material from said units, and means operative at different levels of the material in said reservoir for successively controlling the flow of fluid from said source to said units.



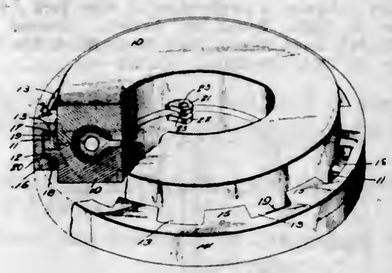
1,375,657. PROCESS FOR MAKING ARTICLES OF QUARTZ GLASS. JOHN SCHARL, New York, N. Y., assignor to General Ceramics Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 8, 1919. Serial No. 275,688. 4 Claims. (Cl. 49—78.1.)

1. The process of making articles of quartz glass consisting in heating the quartz into a plastic mass in an electric resistance furnace about a resistance core, closing the bottom of the fused mass, then removing the same



from the furnace together with the hot core and blowing the mass out into desired shape.

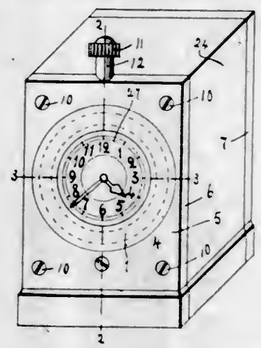
1,375,658. DYNAMO-ELECTRIC MACHINE AND BRUSH-HOLDER DEVICE THEREFOR. CLARENCE F. GILCHRIST, Toledo, Ohio, assignor to Willys Corporation, Toledo, Ohio, a Corporation of Delaware. Filed July 9, 1917. Serial No. 179,462. 17 Claims. (Cl. 171—324.)



4. In a dynamo electric machine, the combination of a casing; a brush holder ring, adjustably secured to said casing and provided with an insulating washer on each side thereof; a brush holder secured to said ring and insulated therefrom by said washers; and a brush holder adjustably secured to said ring and insulated therefrom by said washers.

1,375,659. SCREEN. HEINRICH ILLIG, Frankfort-on-the-Main, Germany. Filed Feb. 16, 1915. Serial No. 8,706. 1 Claim. (Cl. 95—81.)

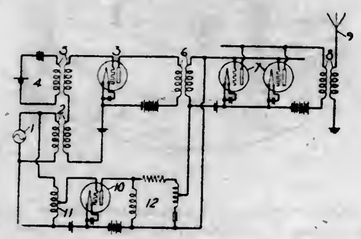
A screen for the photo-mechanical process, consisting of a sheet of transparent material having formed in one of its surfaces depressions leaving a net of transparent lines crossing each other at uniform angles, said depressions being filled with an opaque material to constitute opaque fields, said transparent lines and opaque fields being flush to form a plane surface.



1,375,660. INTERLOCKING MOLD. KARL B. KILBORN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 14, 1917. Serial No. 207,121. 2 Claims. (Cl. 18—43.)

1. A mold comprising complemental annular mold sections providing an annular mold chamber between them, means for holding the sections against independent turning movement and means coöperating with the sections and turnable about them for drawing the sections together and holding them in their drawn together relation.

2. A vulcanizing mold for tires consisting of separate annular complemental sections, the mating parts of which are provided with grooves for the reception of a tire carcass, outwardly projecting lugs on the periphery of each of said sections, the lugs on one of the sections being adapted to engage and aline with the lugs on the other section when the sections are mated, and said lugs being provided with inclined faces opposite to the engaging faces of the lugs, a circular band provided with spaces through which the alined lugs on the mold sections are passed, and with two rows of inwardly projecting lugs, the lugs in one row being in alinement with the lugs in the other row and adapted to fit in the spaces between the lugs on the mold sections, and said lugs on the circular band being provided with inclined faces adapted to engage the first mentioned inclined faces when the circular band is turned to press the mold sections together, and means to prevent twisting or turning of the mold sections when the circular band is turned relatively to the mated mold sections.

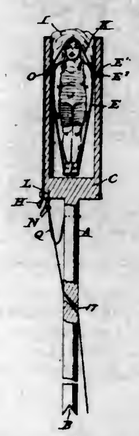


1,375,661. WATCH-MOVEMENT CASE. SISSAK K. OUZOUN-BOGHOSSIAN, Washington, D. C. Filed Nov. 20, 1920. Serial No. 425,352. 2 Claims. (Cl. 58—56.)

2. A mask for photographic printing machines comprising rods detachably secured to each other, a right-angled plate slidably mounted thereon and a pair of other plates each one of which is parallel to one arm of said right-angled plate and slidably mounted on rods of the said mask in position to form with said right-angled plate a contained rectangle of any desired size.

REISSUES.

15,089. RADIOTELEPHONY. CARL R. ENGLUND, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 3, 1920. Serial No. 362,961. Original No. 1,258,548, dated Mar. 5, 1918, Serial No. 83,504, filed Mar. 11, 1916. 20 Claims. (Cl. 250—6.)



1. A radio transmitting system comprising in combination means for generating and modulating high frequency oscillations, means for impressing upon said modulated oscillations an unmodulated oscillation of opposite phase, and means for amplifying and transmitting the resultant of said oscillations.

15,090. PROCESS FOR RECOVERING CYANOGEN COMPOUNDS. EDWARD VICTOR ESPENHAHN, East Orange, N. J. Filed Jan. 17, 1921. Serial No. 438,046. Original No. 1,315,219, dated Sept. 9, 1919, Serial No. 178,943, filed July 6, 1917. 14 Claims. (Cl. 23—13.)

14. In a process for recovering cyanogen compounds, forming a solution of a complex cyanogen compound, crystallizing such complex cyanogen compound from the solution, treating the crystallized complex cyanogen compound with acid to generate hydrocyanic acid and an insoluble complex cyanogen compound.

15,091. AERIAL TOY PARACHUTE. THOMAS F. POWELL, Retsil, Wash. Filed Jan. 31, 1921. Serial No. 441,694. Original No. 1,362,894, dated Dec. 21, 1920, Serial No. 355,969, filed Feb. 3, 1920. 3 Claims. (Cl. 46—37.)

1. An aerial toy comprising an arrow shaft with a receptacle at one end, a figured toy with parachute adapted to be contained within said receptacle, a rubber band for releasing the toy from the receptacle, and means for automatically releasing said toy at a predetermined time.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 19, 1921.

[PUBLISHED APRIL 23, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 108,268. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) AKTIEBOLAGET TIDAN, Mariestad and Leksberg, Sweden. Filed Jan. 3, 1918.

UNICA

Particular description of goods.—Articles Made from Vulcanized Fiber—Namely, Toothed Wheels and Pickers for Looms.

Claims use since July, 1899.

Ser. No. 109,057. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARRY MUNDELL FRECK, Columbus, Ohio. Filed Feb. 18, 1918.

SAF-T-LAX

The word "Saf-T-Lax."

Particular description of goods.—Laxative and Liver Pills.

Claims use since March, 1917.

Ser. No. 109,847. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) MIDLAND MOTOR CAR AND TRUCK COMPANY, Oklahoma, Okla. Filed Mar. 28, 1918.

No claim is made to the exclusive use of the words "Oklahoma City, Oklahoma" apart from the mark as shown.

Particular description of goods.—Motor Cars and Trucks.

Claims use since Jan. 15, 1918.

Ser. No. 115,550. (CLASS 38. PRINTS AND PUBLICATIONS.) HERALD-LEADER COMPANY, Menominee, Mich. Filed Jan. 31, 1919.

CLOVER-LAND

Particular description of goods.—Illustrated Magazine Published Monthly.

Claims use since the 15th day of January, 1916.

Ser. No. 116,122. (CLASS 15. OILS AND GREASES.) PENN LUBRIC OIL COMPANY, Kansas City, Mo. Filed Feb. 24, 1919.

No claim being made to the words "Products Stand for Quality," "Kansas City, Mo.," and "Pennsylvania Oils."

Particular description of goods.—Motor and Engine Oil, Lubricating Oils and Greases, and Carbonless Motor-Oil.

Claims use since Dec. 27, 1916.

Ser. No. 118,273. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PORTER COMPANY, Chicago, Ill. Filed May 8, 1919.

Applicant disclaims the right to the exclusive use of the words "Guaranteed Complete Satisfaction or Money

Refunded" and the diagrammatic representation of a spark-plug apart from the mark shown by the drawing.
Particular description of goods.—Spark-Plugs.
Claims use since Mar. 1, 1919.

Ser. No. 119,175. (CLASS 39. CLOTHING.) PHIL. WALCOFF & CO., INC., New York, N. Y. Filed June 3, 1919.

TRIPPELBILT

Particular description of goods.—Boys' Outer Clothing—Namely, Coats, Vests, Trousers, and Overcoats.
Claims use since May 12, 1919.

Ser. No. 120,982. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) BADGER MANUFACTURING CORPORATION, Milwaukee, Wis. Filed July 28, 1919.

Particular description of goods.—Bumpers, Creepers, Steering-Wheels, Luggage-Carriers, Accelerators, Footrests, and Robe and Foot Rails.
Claims use since July 1, 1918.

Ser. No. 122,841. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) LYNN RUBBER MANUFACTURING COMPANY, Warren, R. I. Filed Sept. 18, 1919.

Lynco

Particular description of goods.—Arch-Supporters and Bunion-Protectors.
Claims use since March, 1918.

Ser. No. 123,072. (CLASS 39. CLOTHING.) MENGART KNITTING MILLS, New York, N. Y. Filed Sept. 24, 1919.

Particular description of goods.—Sweaters, Mufflers, Caps, and Hats for Ladies and Girls.
Claims use since Aug. 5, 1919.

Ser. No. 123,234. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BEAVER MACHINE & TOOL CO., INC., Newark, N. J. Filed Sept. 29, 1919.

BEAVER

Particular description of goods.—Electric Switches, Switch-Plates, Switch-Receptacles, Feed-Through Switches, Canopy-Switches, Electric Sockets, Push-Sockets, Pull-Sockets, Key-Sockets, Cut-Outs, Plugs, Wall-Receptacles, Attachment-Plugs, Fuse-Receptacles, Fuse-Boxes, and Rosettes.
Claims use since Jan. 1, 1918.

Ser. No. 124,822. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THOMPSON AND CAPPER, LIMITED, Liverpool, England. Filed Nov. 12, 1919.

QUINPHOS

Particular description of goods.—General Tonic.
Claims use since the year 1880.

Ser. No. 124,889. (CLASS 39. CLOTHING.) GUTHRIE & COMPANY, LIMITED, Singapore, Straits Settlements, and London, England. Filed Nov. 14, 1919.

Particular description of goods.—Wearing-Apparel for Men and Women—Namely, Coats and Suits; Underwear Made of One, Two, and Three Piece Garments and of Knitted Fabric and Textile Fabric; Hosiery, Neckties, Dress and Work Shirts Made of Flannel and Cotton, Negligée Shirts, Nightgowns, Pajamas, Smocks, and Overalls.
Claims use since February, 1910.

Ser. No. 125,115. (CLASS 12. CONSTRUCTION MATERIALS.) MCPHEE CEMENT COMPANY, Scranton, Pa. Filed Nov. 20, 1919.

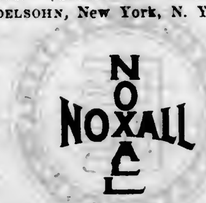
In the trade-mark as used the representation of flame forming a background for the word "Hybond" is in red.
Particular description of goods.—High-Temperature Cement.
Claims use since Oct. 1, 1919.

Ser. No. 125,413. (CLASS 2. RECEPTACLES.) WALTHAM BAG & PAPER COMPANY, Waltham, Mass. Filed Nov. 28, 1919.

Particular description of goods.—Paper Bags and Paper Boxes.
Claims use since Sept. 20, 1919.

Ser. No. 125,951. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) ELECTRIC ARC CUTTING AND WELDING COMPANY, Newark, N. J. Filed Dec. 13, 1919.

NEW-ARC



Particular description of goods.—Metal-Welding Electrodes.
Claims use since Sept. 1, 1919.

Ser. No. 126,746. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PEYTON PACKING COMPANY, Charleston, W. Va., and El Paso, Tex. Filed Jan. 2, 1920.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE GILLER.

Decided April 16, 1921.

PATENTS—REVIVAL OF ABANDONED APPLICATION—APPLICATION ABANDONED WHILE APPLICANT WAS SERVING WITH THE FORCES OF THE UNITED STATES.

Under section 6 of the act of March 3, 1921, a citizen of the United States whose application became abandoned while he was serving with the forces of the United States during the war upon filing a responsive amendment is entitled to proceed with the prosecution of his case, irrespective of whether he was serving abroad or in this country.

ON PETITION.

Messrs. Fisher, Towle, Clapp & Soans for applicant.

ROBERTSON, *Commissioner:*

This case is before me on a petition to revive the application in view of the provisions of section 6 of the act of March 3, 1921.

The application became abandoned on August 18, 1918. A petition to revive the same was filed on July 10, 1920, accompanied by an amendment, which the Examiner stated was responsive to the last Office action. This petition was denied on July 22, 1920, on the ground that the showing was insufficient to establish unavoidable delay. Applicant now asks that the application be revived under the Nolan Act.

Section 6 of the act provides that—

> where an application became abandoned or forfeited, during the time the applicant was serving with the forces of the United States, by reason of his failure to take action or pay a fee within the time now required by law, such action may be taken, or the fee paid, within six months from the passage of this act.

From affidavits filed with the former petition it appears that applicant was in the military service from April 3, 1918, until March 10, 1919. The affidavit does not state whether or not applicant was serving abroad. The statute as quoted above, however, does not in terms limit relief to cases where the applicant was serving overseas and it is thought that it should not be restricted by construction beyond its terms. Therefore the averment that he was in the service at the time of the abandonment is sufficient, it being immaterial whether he was with the forces abroad or with the forces in this country.

The petition is granted.

EX PARTE KARNET.

Decided April 16, 1921.

PATENTS—STATUTES—NOLAN ACT—FOREIGN APPLICATION FORFEITED AND ABANDONED—RIGHT TO PAY FINAL FEE OR RENEW.

A foreign applicant whose application became forfeited on September 7, 1919, and abandoned on March 7, 1921, may now, under section 2 of the act of March 3, 1921, either pay the final fee or renew the application, provided the laws of the country of which he is a citizen or subject grant substantially reciprocal privileges to citizens of the United States, and where a renewal fee was paid it may be applied as a part of the final fee should applicant so elect.

ON PETITION.

Mr. Glen S. Noble for applicant.

ROBERTSON, *Commissioner:*

This case is before me on a petition to revive the application, forfeited for non-payment of the final fee.

When the application was filed on October 28, 1914, applicant was a subject of the Emperor of Austria. He is now a subject of the King of Roumania. The application was allowed March 6, 1919, and this petition for renewal, accompanied by a renewal fee of $15, was filed on April 2, 1921.

Under the circumstances the case must be brought within section 2 of the Nolan Act of March 3, 1921, to entitle applicant to relief.

Since the final fee was due on or before September 6, 1919, the application might have been renewed at any time after forfeiture prior to March 7, 1921. In view of the provisions of section 2 of the Nolan Act applicant may now either pay the final fee or renew the application, provided it is shown that substantially reciprocal privileges are accorded by Roumania to citizens of the United States, as pointed out in *ex parte* Rechnitzner, (285 O. G., 572.)

If applicant elects to pay the final fee instead of renewing the application, the renewal fee paid may be applied as a part of the final fee.

On the facts presented the petition is denied.

EX PARTE MOSBACHER.

Decided April 16, 1921.

PATENTS—STATUTES—NOLAN ACT—FOREIGN APPLICATION TWICE FORFEITED AND ABANDONED—RIGHT TO PAY FINAL FEE OR RENEW.

A foreign applicant whose application became forfeited on December 5, 1914, was renewed and again for-

feited within two years from the original notice of allowance, may now, under section 2 of the act of March 3, 1921, either pay the final fee or file a second renewal, provided the laws of the country of which he is a citizen or subject grant substantially reciprocal privileges to citizens of the United States.

ON PETITION.

TRUSS-CUSHION FOR HYGIENICAL PURPOSES.

Mr. Carl Teves for the applicant.

ROBERTSON, *Commissioner:*

This case is taken up in view of letter filed by applicant, which is treated as a petition.

Applicant is a citizen of Germany. The application was filed September 3, 1912, was allowed May 24, 1913, renewed May 21, 1914, and again allowed June 4, 1914.

Applicant is in default as to the payment of the final fee, which was due on or before December 4, 1914. After that date it was open to applicant to file a second renewal, which could have been done at any time prior to May 25, 1915.

Relief from these defaults may be claimed only under the provisions of section 2 of the act of March 3, 1921, known as the Nolan Act. This section provides—

that the time now fixed by law for the payment of any fee or for the taking of any action with respect to an application for patent, which time had not expired on August 1, 1914, or which commenced after August 1, 1914, is hereby extended until the expiration of one year from the passage of this act, without the payment of extension fees or other penalty in favor of the citizens or subjects of countries which have extended, now extend, or shall extend during a period of one year from the passage of this act substantially reciprocal privileges to citizens of the United States, provides that no extension herein shall confer such privileges on the citizens or subjects of a foreign country for a longer term than the term during which such privileges are conferred by such foreign country on the citizens of the United States, but nothing in this act shall give any right to reopen interference proceedings where final hearing before the Examiner of Interferences has taken place.

Since the date upon which the final fee could have been paid and the date on which a second renewal could have been filed are each subsequent to August 1, 1914, applicant is now entitled to take either of these actions, provided the final fee is actually paid or the application is renewed within the time prescribed by section 2, and provided, further, that the Office is satisfied that the laws of Germany extend to citizens of the United States privileges substantially reciprocal to the privileges here sought as to character and duration. As pointed out in the case of *ex parte Rechnitzner*, (285 O. G., 572,) the time of taking the required action governs the right to relief, and hence it is important that such action be taken and proof of the reciprocal foreign laws be filed promptly.

No relief can be granted on the present showing.

EX PARTE RECHNITZNER.

Decided April 16, 1921.

1. PATENTS—STATUTES—NOLAN ACT CONSTRUED—REINSTATEMENT OF APPLICATION.

The act of March 3, 1921, does not automatically reinstate an application, nor has the Commissioner any authority to reinstate it upon a mere request of the applicant for reinstatement; but the action which is appropriate to the condition of the case must actually be made in order to change its status. It is the time when applicant makes the necessary action or pays the required fee that determines his rights under the law.

2. SAME—SAME—SAME—RECIPROCAL PRIVILEGES—PROOF OF THE APPLICABLE FOREIGN LAW.

Relief of foreign applicants under section 2 of the act of March 3, 1921, being conditional upon the granting to citizens of the United States by the country of which the foreign applicant is a citizen or subject of substantially reciprocal privileges, it is necessary that applicants seeking benefits under the act shall prove the applicable foreign law in the absence of knowledge by the Office of such law received from other sources.

ON PETITION.

Mr. Alexander Rechnitzner pro se.

ROBERTSON, *Commissioner:*

This case is before me on petition for reinstatement of the application under the provisions of the act of March 3, 1921, known as the Nolan Act.

The application was filed July 26, 1912, by a subject of the Emperor of Austria, residing in Vienna. In an affidavit filed with the petition applicant avers that he is now a citizen of Czechoslovakia.

The application was held abandoned by the Primary Examiner in a letter dated November 24, 1917. In a petition to the Commissioner following this holding it was prayed that applicant be relieved, either by holding that the delay was unavoidable, or by suspending action on the application until a reasonable time after the war in view of the inability of the resident attorney to communicate with the applicant. In deciding the petition the Acting Commissioner held that—

This Office has no authority to extend the time for action on an application. If the attorney is unable to amend the case himself or to communicate with the inventor, an amendment can be filed when proper information is received, which amendment should be accompanied by a showing of the facts relied upon to establish that the delay in prosecution of the case was unavoidable.

Nothing was done thereafter until the present petition was filed.

The petition asks simply that the application be reinstated under the act of March 3, 1921. No amendment was filed with the petition and there is nothing in the case upon which the Office can act aside from the petition to reinstate. Applicant evidently recognizes the necessity of filing an amendment and promises to do so as soon as possible, but he points out that owing to uncertainties as to the construction of the act and as to what privileges his own country may grant, he wishes to save his rights under the law until he can make a properly responsive amendment.

If applicant is entitled to relief it is by reason of the provisions of section 2 of the act, which provides—

that the time now fixed by law for the payment of any fee or for the taking of any action with respect to an application for patent, which time had not expired on August 1, 1914, or which commenced after August 1, 1914, is hereby extended until the expiration of one year from the passage of this act, without the payment of extension fees or other penalty in favor of the citizens or subjects of countries which have extended, now extend, or shall extend during a period of one year from the passage of this act substantially reciprocal privileges to citizens of the United States, provided that no extension herein shall confer such privileges on the citizens or subjects of a foreign country for a longer term than the term during which such privileges are conferred by such foreign country on the citizens of the United States, but nothing in this act shall give any right to reopen interference proceedings where final hearing before the Examiner of Interferences has taken place.

It is to be noted, first, that relief is conditioned upon the granting to citizens of the United States

by the country of which the applicant is a citizen of substantially reciprocal privileges and, second, that no extension may confer such privileges on the citizens of a foreign country for a longer term than the term during which such privileges are conferred by such foreign country on the citizens of the United States. Hence, it is necessary to the granting of relief that this Office have knowledge of the foreign law in order to decide whether it provides the reciprocal privileges called for and the necessary extension of term. Judicial notice is not taken of a foreign law. (16 Cyc., 895.) The Office is now endeavoring to secure the foreign laws which are considered reciprocal to the Nolan Act. Until such efforts are successful it will be necessary that each applicant seeking the benefit of the act shall prove the applicable foreign law. Proof of a foreign law is governed by the laws of evidence, and books on this subject should be consulted as a guide to action in this respect.

That an applicant does not bring himself within the provisions of the act merely by giving notice of an intention to act at some time in the future or by asking a reinstatement of the application seems obvious. The provisions of this section contemplate cases in which a fee or an action was due under the law at some time in the past which applicant failed to meet on time, and it provides that these acts may now be performed. It states the character of the acts—namely, the paying of a fee or taking of any action the time for doing which is fixed by law. In the present case applicant asks only that the case be reinstated for future action. The reinstatement of an application is not an action required to be taken by law, and hence the case stands as if no action whatever had been taken. The law is not automatically operative to reinstate applications, and since the things to be done to make it operative are specified things to be initiated by an applicant or on his behalf the Commissioner has no authority to change the status of the application, and its status is not changed until one of the actions specified is taken by the applicant. A petition to reinstate the application is not one of the specified actions. It follows that until applicant has paid a required fee or taken a required action the status of the application cannot be changed by any other thing the applicant may do or anything the Commissioner might do, and consequently that an applicant's rights under this section are determined only at the time the necessary action is taken. Such action must be taken within the time prescribed in the section under consideration. In the present case the application stands under a holding of abandonment for failure to make proper response, and the required action, therefore, is the filing of a responsive amendment, and until such an amendment is filed the application is not brought within the law. While such action must be taken, in any event, within the time prescribed, proof of the foreign law may be made at a later date, although the time of filing such proof may have a bearing on applicant's diligence in prosecution under section 4894 of the Revised Statutes.

The petition is accordingly denied.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

SHARP *v.* GAMAGE.

Decided February 7, 1921.

PATENTS—INTERFERENCES—RIGHT TO MAKE CLAIM.

An applicant whose application discloses a dust-guard for car-axle boxes consisting of a plate having a lower edge which is square, with the corners cut off in circular form, leaving a flange extending straight across the bottom between the parts where the corners are clipped off, *Held* not entitled to make a claim calling for a plate having a flange extending around a semicircular lower edge.

[Affirmed by the Court of Appeals of the District of Columbia, 285 O. G., 574.]

Mr. J. H. Milans and *Mr. C. T. Milans* for Sharp.

Mr. L. J. Doolittle for Gamage.

VAN ORSDEL, *J.:*

This is an interference proceeding involving an invention relating to dust-guards for car-axle boxes. The application of both parties disclose a resilient sheet-metal plate having its upper edge straight and the lower edge rounded. Sharp also showed a guard having the lower corners clipped instead of rounded. The car-axle extends through an opening in the center of the plate, surrounded by a circumferential flange, with flanges at the upper and lower edges reversely curved.

The issue was originally in eight counts. The Examiner of Interferences awarded priority as to all the counts to Sharp. The Board of Examiners-in-Chief awarded counts 1, 2, 3, and 8 to Sharp, but held that Sharp could not make the remaining counts, which were awarded to Gamage, and Sharp alone appealed. Hence the issue was narrowed to counts 4, 5, 6, and 7. The Commissioner affirmed the Board, awarding priority on these counts to Gamage. From this Sharp appeals.

All the tribunals below found that Sharp, the senior party, was the first to conceive and reduce to practice. With this holding we agree. From a careful study of Sharp's specification and drawings we are also in accord with the Examiners-in-Chief and the Commissioner in holding that Sharp is not entitled to make the present claims. The claims, as set forth in count 4, call for—

a dust guard for car axle boxes consisting of a single resilient plate provided with an opening for the car axle and having integral flanges at its upper and lower edges, the flange at its upper edge being straight and its lower edge being of semi-circular outline and bent away from the body of the plate to constitute a flange extending around said semi-circular lower edge.

Sharp's application drawings fail to disclose a lower flange extending around the semicircular lower edge. It shows the lower edge square, with the corners cut off in circular form, leaving the flange extending straight across the bottom between the points where the corners are clipped off. This disclosure does not meet the issue, since the

evident purpose is to have the dust-guard so shaped that it will fit into and conform to the semicircular bottom of the journal-box.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

The decision of the First Assistant Commissioner reads as follows:

WHITEHEAD, *First Assistant Commissioner:*

This case is before me on appeal by Sharp from the decision of the Examiners-in-Chief in so far as it reversed the decision of the Examiner of Interferences as to counts 4, 5, 6, and 7.

The Examiner of Interferences awarded priority to Sharp as to all the counts. His decision was affirmed by the Examiners-in-Chief as to counts 1, 2, 3, and 8, but reversed as to counts 4, 5, 6, and 7, on the ground that the invention as defined in those counts is not disclosed in Sharp's application.

The invention relates to dust-guards for car-axle boxes, and, as shown in the applications of both parties, this dust-guard comprises a resilient sheet-metal plate having a straight upper edge and a rounded lower edge, Sharp also disclosing a form of the dust-guard in which the lower corners are clipped instead of rounded. The plate is provided with a central opening for the car-axle and a circumferential flange surrounding it and with flanges at its upper and lower ends, which are reversely curved at their edges.

The question of Sharp's right to make the claims turns upon the question whether he shows a flange at the lower end of the metal plate arranged as described in counts 4, 5, 6, and 7. A motion to dissolve was filed by Gamage on the ground that Sharp had no right to make these claims, which was denied by the Law Examiner. The Examiner of Interferences followed this holding, since no further evidence had been presented on that point, and on the question of priority generally he held in favor of Sharp. His decision on the general question of priority was affirmed by the Examiners-in-Chief, who, however, held that the Law Examiner was in error in holding that claims 4, 5, 6, and 7 were broad enough to read on Sharp's disclosure.

The counts in question read as follows:

4. A dust guard for car axle boxes consisting of a single resilient plate provided with an opening for the car axle and having integral flanges at its upper and lower edges, the flange at its upper edge being straight and its lower edge being of semi-circular outline and bent away from the body of the plate to constitute a flange extending around said semi-circular lower edge.

5. A dust guard for car axle boxes consisting of a single resilient plate provided with an opening for the car axle and having integral flanges at its upper and lower edges, the flange at its upper edge being straight and its lower edge being of semi-circular outline and bent away from the body of the plate to constitute a flange extending around said semi-circular lower edge and bending away from the plate in a gradual curve reversing at its extreme edge.

6. A dust guard for car axle boxes consisting of a single resilient plate provided with an opening for the car axle and having an integrally formed straight flange at its upper end and having at its lower end an integrally formed flange of semi-circular outline partially surrounding said opening.

7. A dust guard for car axle boxes consisting of a single resilient plate provided with an opening for the car axle and having at its upper end a lateral flange and its lower edge of semi-circular outline and bent away from the body of the plate to constitute a flange extending around said lower edge, said plate also having integral ribs formed therein and extending upwardly near its sides thereof.

It is to be noted that each of these counts contrasts the flange at the upper edge with the flange at the lower edge, count 4 specifying that the flange at the upper edge is straight, while the flange at the lower end extends "around said semi-circular lower edge," and count 6 specifying that the upper flange is straight, but that the lower flange has a "semi-circular outline partially surrounding said opening."

In the form of the device shown in Figure 2 of Sharp's application the lower edges of the dust-guard are shown as having the corners cut off, it being stated, however, that this lower edge may be rounded, and in Fig. 6 the lower edge is shown as rounded. The purpose of this construction was to enable the dust-guard to fit into the journal-boxes having a rounded instead of a flat bottom. In each of these figures the flange is shown as extending straight across the lower side. In other words, the form shown in Fig. 2 is just what would be obtained if the guard had been formed of rectangular outline exactly alike at the top and bottom and the two lower corners had been cut off. There is no statement in the specification that these flanges were formed any differently or that they were intended to conform in outline to the rounded lower edge of the dust-guard.

In the Gamage application, on the other hand, the lower edge of the dust-guard is shown as rounded, and the flange is similarly shown—that is, as being substantially parallel to the curved lower edge. In his application Gamage specifies a function for this construction—namely, that as the flange extends upwardly on each side of the plate and partially surrounds the opening for the axle it serves to stiffen this portion of the body of the plate and increase the normal resistance to buckling. It is also stated that by virtue of this construction the degree of resiliency of the plate as a whole decreases from the top to the bottom.

The construction placed by the Law Examiner on the claims in question is believed not to be the natural one, since he held that the flange extending across the lower edge of the plate can, since the lower edge of the plate is rounded, be said broadly to extend around the lower edge. Giving these words their normal meaning, they are believed to define a structure such as shown by Gamage and not to include the structure shown by Sharp.

The decision of the Examiners-in-Chief awarding priority to Gamage as to counts 4, 5, 6, and 7 is affirmed.

Patents Nos. 1,375 662 to 1,376,390.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 285—No. 4. TUESDAY, APRIL 26, 1921. Price—$5 per year.
[PUBLISHED MAY 3, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Disclaimers.

1,260,708.—*Clarence D. Platt*, Bridgeport, Conn. ELECTRIC-SWITCH CONSTRUCTION. Patent dated March 26, 1918. Disclaimer filed April 11, 1921, by the assignee, *The Trumbull Electric Manufacturing Company.*

Enters this disclaimer—

"As to claim 8 of every combination therein set forth, except such a construction in which the means on the cover for throwing the handle to the off position as the cover is opened is separate and distinct from the stop for locking the switch handle in the off position when the cover is open and in which the handle itself as distinguished from the switch proper is directly affected by said stop and said throwing means."

1,353,106.—*Robert McC. Johnstone*, Roselle Park, N. J. WINDING MECHANISM. Patent dated October 5, 1920. Disclaimer filed April 12, 1921, by the assignee, *Cameron Machine Company.*

Enters the following disclaimer:

"In respect to claim 8: by limiting the device having grooves to a device in which the grooves are of such character that hills and valleys that merge into each other, without producing pronounced separating edges, are formed in its surface.

"In respect to claims 9 and 10: by limiting the roller having grooves to a roller in which the grooves are of such character that hills and valleys that merge into each other, without producing pronounced separating edges, are formed in its surface.

"In respect to claim 11: by limiting the surface winding roll having circumferential grooves to a surface winding roll having circumferential grooves of such character that hills and valleys that merge into each other, without producing pronounced separating edges, are formed in its surface."

Adverse Decisions in Interference.

PATENT NO. 1,290,229.

On February 26, 1921, a decision was rendered that John J. Kenney was not the first inventor of the subject-matter covered by claims 7 and 8 of his Patent No. 1,290,229, subject, "Swivel attachment-plug," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,293,033.

On March 15, 1921, a decision was rendered that James Cernohouz was not the first inventor of the subject-matter covered by claim 1 of his Patent No. 1,293,033, subject, "Photographic-film camera," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,303,617.

On March 21, 1921, a decision was rendered that William W. Tuck was not the first inventor of the subject-matter covered by claims 15, 16, and 17 of his Patent No. 1,303,617, subject, "Vegetable-cutting apparatus," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,330,926.

On March 24, 1921, a decision was rendered that Frank R. Warren was not the first inventor of the subject-matter covered by claims 1, 2, and 4 of his Patent No. 1,330,926, subject, "Locks for motor-vehicles," and no appeal having been taken within the time allowed such decision has become final.

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) The Baker patents, Nos. 1,239,076 and 1,267,353, and Baker design patents, Nos. 50,291 and 51,165, all relating to wall-receptacles in bathrooms for soap and toilet articles, *Held* void for lack of patentable invention. *Baker et al.* v. *Hughes-Evans Co. et al.*, 270 Fed. Rep., 97.

(U. S. C. C. A. Calif.) The Denivelle patent, No. 1,212,331, for process for the manufacture of artificial travertin, *Held* valid and infringed. *Los Angeles Lime Co. et al.* v. *Nye*, 270 Fed. Rep., 155.

(U. S. D. C. N. J.) The Wooster patent, No. 933,011, for a woven cotton belting saturated with a solution of asphaltum, *Held* void for anticipation and lack of invention. *Duryea Mfg. Co.* v. *Agrippa Mfg. Corporation et al.*, 270 Fed. Rep., 224.

(U. S. D. C. Mo.) Claims 1 to 3 of the Girtanner patent, No. 986,455, for a furnace-arch consisting of a pair of I-beams, brackets supported thereby, with flanges on the lower edges, and tiles provided with grooves to receive such flanges, *Held* anticipated; also *Held* infringed, if valid. *Laclede Christy Clay Products Co.* v. *City of St. Louis*, 270 Fed. Rep., 338.

APPLICATIONS UNDER EXAMINATION.

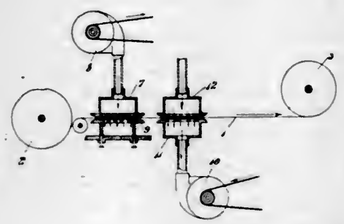
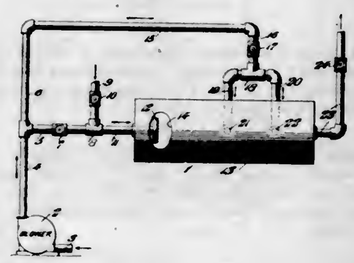
PATENTS



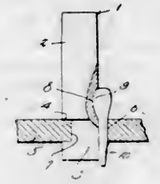
GRANTED APRIL 26, 1921.

1,375,662. PHOTOGRAPHIC-PRINTING MACHINE. JOSEPH ABEL, Washington, D. C. Filed July 12, 1919. Serial No. 310,474. 6 Claims. (Cl. 95—79.)

1. A photographic printing machine comprising a lamp box, a window on top of the box, a mask hinged over the window and a cover hinged over the mask.



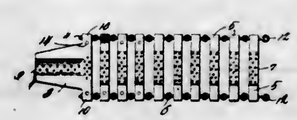
1,375,663. METHOD OF CLEANING KNITTED OR LIKE FABRICS. WILLIAM A. AINSWORTH, Utica, N. Y. Filed Aug. 9, 1919. Serial No. 316,313. 2 Claims. (Cl. 26—2.)



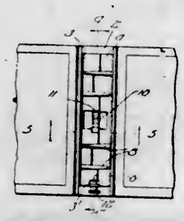
1. The herein described method of cleaning knitted or like fabrics which consists in passing the fabric from one point to another and in stretching the fabric laterally between said points and passing a current of air therethrough at such stretched portions as the fabric passes, substantially as described.

1,375,664. HOT-AIR GENERATOR. HENRY S. AUSTIN, Philadelphia, Pa. Filed Jan. 31, 1921. Serial No. 441,414. 2 Claims. (Cl. 126—116.)

1. In an apparatus of the character described a tank, a burner therein, an air blower, a pipe leading from said air blower and having two branches, one branch communicating with the gas pipe leading to said burner and the other branch conveying fresh air to said tank in advance of said burner, said air and gas pipes being provided with suitable valves for controlling the flow of gas and fresh air.



1,375,665. CLEAT FOR TRACTOR-WHEELS. WOLSEY R. BARBOUR, Terre Haute, Ind. Filed July 28, 1919. Serial No. 313,790. 3 Claims. (Cl. 301—44.)

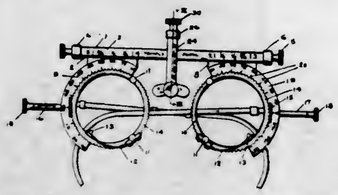


1. In combination with a wheel rim having an opening therein, of a cleat provided with a seating shoulder and a shank extending from the seating shoulder, the shank being adapted to enter the opening in the rim and having a notch for engaging the rim, a key for entering the opening in the rim to force the notch into engagement with the rim and inter-engaging elements on the cleat and key to prevent dislodgment of the key.

1,375,666. TRACTION-MAT. GEORGE P. BAUER, Miami, Ariz. Filed Dec. 27, 1920. Serial No. 433,404. 2 Claims. (Cl. 238—14.)

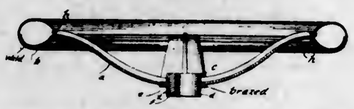
1. A traction mat including a rigid lift having a tapering studded recess formed in its longitudinal center.

1,375,667. LOOSE-LEAF BINDER. GOTTFRIED P. BAUMANN, Chicago, and RALPH A. FINK, Oak Park, Ill. Filed July 5, 1918. Serial No. 243,276. 11 Claims. (Cl. 129—17.)



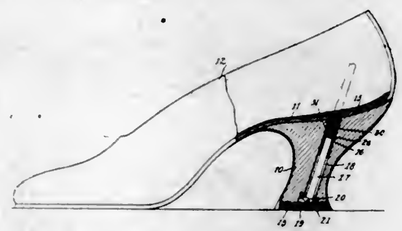
1. A loose leaf binder comprising a hinged back, including a shaft for the hinge, and a spring pressed locking dog carried by the shaft for automatically locking the hinge when the binder is closed.

1,375,668. HAND-GRIP FOR FISHING-RODS. WILBUR L. BEATY, South Butte, Mont. Original application filed Apr. 16, 1919, Serial No. 290,623. Divided and this application filed Nov. 21, 1919. Serial No. 339,625. 4 Claims. (Cl. 43—23.)



1. A hand grip for fishing rods including a core, a plurality of members circular in cross section arranged around the periphery of the core to extend longitudinally thereof and covering an area of the core, means carried by the core and securing said members at their ends, and a band of adhesive tape around the core and having its adhesive coated face presented outwardly to secure the intermediate portions of the members.

1,375,669. TRIAL-FRAME. WILLIAM H. BOUTELLE, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 29, 1919. Serial No. 314,078. 3 Claims. (Cl. 88—20.)



1. In a trial frame the combination with a cross bar, of a slotted tube secured to and depending from said cross bar, a plunger arm slidable within the tube and having a fin engaged in the slot to secure the plunger against rotation, and an adjusting screw engaged with the plunger for controlling the movement thereof.

1,375,670. STEERING-WHEEL. HARRY W. BUNDY, Detroit, Mich. Filed Dec. 26, 1919. Serial No. 347,263. 9 Claims. (Cl. 74—33.)

1. A hand wheel, comprising a rim, a spider formed of stamped strips forming pairs of stamped metal arms lapped over each other at the center and provided with bosses surrounding the central opening, and a hub secured in the opening and within the bosses.

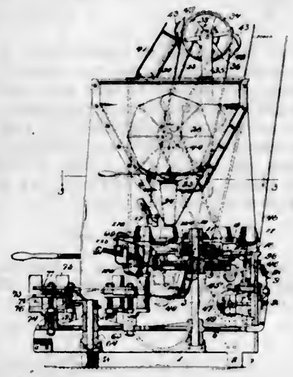
1,375,671. HEEL-FASTENER. LESTER CERF, Brooklyn, N. Y. Filed May 8, 1920. Serial No. 379,837. 3 Claims. (Cl. 36—42.)

1. A heel fastener comprising a heel plate provided with a tubular socket having an internal screw thread, the said heel plate being adapted to rest on the sole of the foot-wear and the said socket being adapted to pass into the upper portion of a bore in the heel, a pin constructed and arranged to pass into the said heel bore from the lower end thereof, and a spring held on the upper end of the pin and adapted to engage the interior thread of the socket to fasten the pin and socket together.

1,375,672. ACID-RESISTING ALLOY. ALVAH W. CLEMENT, Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 26, 1917. Serial No. 182,911. 1 Claim. (Cl. 75—1.)

An acid resisting alloy consisting of substantially 60 per cent. chromium, substantially 2 to 4 per cent. silicon, substantially 2 to 5 per cent. carbon existing in the alloy as graphitic carbon, and the remainder of iron.

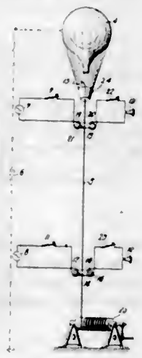
1,375,673. ACID-RESISTING ARTICLE AND METHOD OF MAKING SAME. ALVAH W. CLEMENT, Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 26, 1917. Serial No. 182,913. 4 Claims. (Cl. 75—1.)



1. The method of forming articles of an iron chromium alloy to have an acid resisting surface which consists in making an iron chromium alloy of the desired proportions which alloy is substantially carbonless, then fabricating the alloy into the article it is desired to make, treating the said article in suitable fashion to impregnate the surface, which should be acid resisting, with carbon, and quickly cooling the surface which is to be acid resisting in any suitable manner, thereby to induce the formation of iron and chromium carbid in the body of the article at the surface which is to be acid resisting.

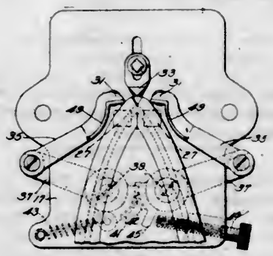
2. As an article of manufacture having an acid resisting surface, said article comprising a body portion of an alloy of desired ingredients, some or all of which are capable of forming carbids which are acid resisting, the said article at substantially only the surface which is to be acid resisting containing a large proportion of carbids of the metals making up the alloy.

3. As an article of manufacture having an acid resisting surface which consists of a body formed of an alloy of metals of desired ingredients, some or all of which are capable of forming carbids which are acid resisting, that portion of the article which is to be exposed to contact with the acid being made resistant by the presence of carbids of the metals forming the alloy as substantially only the surface exposed.



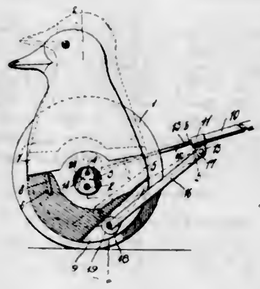
4. As an article of manufacture having an acid resisting surface, a body composed of an alloy of iron and chromium, the acid resisting surface of which is made resistant by the presence of iron and chromium carbid in the body at substantially only the said surface.

1,375,674. FILLING-MACHINE. LAWRENCE COBB, Richmond, Va. Filed Aug. 9, 1918. Serial No. 249,196. 9 Claims. (Cl. 226—72.)



2. A can filling machine, comprising a hopper, a rotatable table below the hopper, radially extending arms carried by the table, charge receiving cylinders carried by the outer ends of the arms and adapted to pass below the hopper, sleeves carried by the said arms and having disks closing the lower ends of the cylinders, springs normally holding the sleeves in an outward position with the disks from below the cylinders, means for intermittently rotating the table, a cam timed with the table rotating means and operating a lever for successively operating the sleeves for withdrawing the disks from below the cylinders, a rotary can supporting means below the table and driven by the table and adapted to receive the discharge from the charge receiving cylinders.

1,375,675. SIGNALING METHOD AND SYSTEM. EDWIN H. COLPITTS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 5, 1917. Serial No. 146,703. 17 Claims. (Cl. 179—1.)

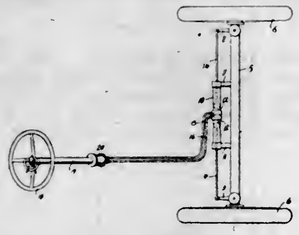


1. The combination of an aerial vessel, an anchoring strand connecting said vessel to the ground, an electric circuit comprising said strand and the capacity of said vessel to ground, means for signaling over said circuit comprising a source of signals at one end of said strand, means for impressing said signals upon said strand, a receiver near the other end of said strand, and a transformer, the primary winding of said transformer consisting of said strand and having its secondary connected to said receiver.

1,375,676. SOLE-FITTING MACHINE. JOHN W. COSGROVE, Medford, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 19, 1917. Serial No. 197,464. 11 Claims. (Cl. 12—40.)

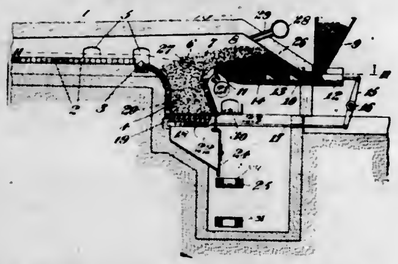
1. A sole fitting machine, having, in combination, a knife for cutting into the marginal portion of a sole, gages for engaging the edge of the sole to position it for the operation of the knife, and a combined presser gage and sole stripper adjacent the knife.

1,375,677. TOY. JOHN F. CRIST, Cleveland, Ohio. Filed May 24, 1920. Serial No. 383,754. 1 Claim. (Cl. 46—45.)



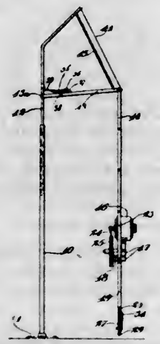
In combination, an axle, a pair of disks mounted thereon, a counter balance carried by the axle, and provided with depending apertures in its top portion, and in its bottom portion with an elongated slot, a handle, spring arms extending from said handle, pintles provided on said arms, said pintles adapted to engage the device, a ferrule mounted upon the end of said handle, a rod pivotally connected to the ferrule and extending into said slot in said counter balance and pivotally connected therein.

1,375,678. HYDRAULIC STEERING-GEAR. HOLLIS B. CRUM, Bucyrus, Ohio, assignor to Bucyrus Machine and Tool Co., Bucyrus, Ohio, a Corporation of Ohio. Filed Mar. 9. 1920. Serial No. 364,437. 4 Claims. (Cl. 180—80.)



4. A steering mechanism in combination with the steerable wheel axle set and steering post of a vehicle, comprising a pump carried on the steering post, a plunger within the pump and actuated by the steering post, said pump divided into two compartments having a fluid passage in each compartment, a fluid motor carried on the axle and connecting with the vehicle wheels, and a tube

connection established between the fluid motor and each fluid passage whereby turning the steering post forces

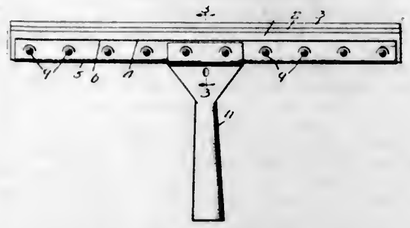


fluid from one of the pump compartments into the fluid motor and receives fluid into the other compartment from the fluid motor.

1,375,679. HEATING-FURNACE. EMIL C. DANNER, Westmont borough, Pa. Filed Sept. 18, 1919. Serial No. 324,659. 6 Claims. (Cl. 110—44.)

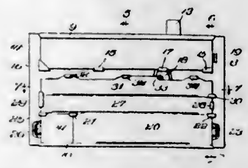
1. A furnace comprising a combustion chamber, a heating chamber leading therefrom, a water-cooled fire-box below the rear of said combustion chamber, a stationary grate at the top of the front wall of said fire-box, a rocking grate at the bottom of said fire-box, means for supplying air to the under sides of said grates, and means for feeding coal upwardly into said combustion chamber and thence across said stationary grate into the fire-box.

1,375,680. PERFORATING-MACHINE. ANDREW L. DAUTERY, Chicago, Ill. Filed July 3, 1920. Serial No. 393,820. 4 Claims. (Cl. 164—89.5.)



1. In a perforating machine, a reciprocatory bar, a perforating needle carried by the bar, a swinging member carrying the needle bar, an electric motor carried by said member and having an operative connection with the needle bar, and a switch for the motor circuit controlled by the movement of the swinging member.

1,375,681. BRUSH. EDWARD AUGUSTUS DENNIN, Troy, N. Y. Filed Oct. 15, 1919. Serial No. 330,694. 10 Claims. (Cl. 132—87.)

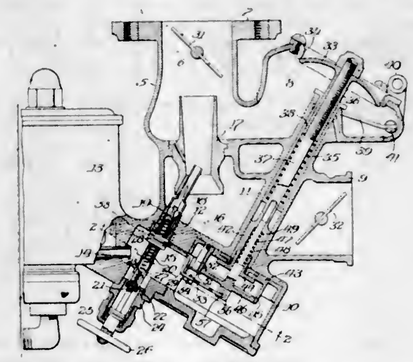


10. A brush comprising in combination, a carrying back having a cavity open at one face thereof, a flexible bristle carrying body carried by said body adapted to be flexed to extend from said cavity or lie therein when not in use, a cover detachably connected to said carrying body to close the cavity thereof when said bristle carrying body is within the cavity, and a glass carried by said cover at the inside thereof to confront and engage the bristles of said bristle carrying body.

1,375,682. SQUEEGEE. WILLIAM J. DENNIS, Chicago, Ill. Filed June 18, 1920. Serial No. 389,949. 2 Claims. (Cl. 15—59.)

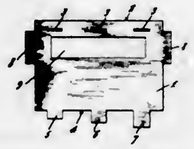
1. A squeegee comprising a head consisting of flexible material, and a plate engaging one side of said material, a second plate disposed upon the other side of said material and having a rebent part extending toward the working surface of the flexible material and providing a trough, and means for securing said plates together.

1,375,683. PRINTING DEVICE. JOSEPH S. DUNCAN, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1919. Serial No. 306,028. 9 Claims. (Cl. 101—369.)



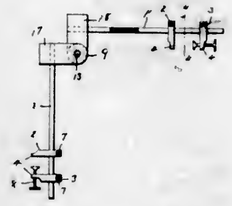
1. A printing device of the character described comprising a frame having means for retaining a card in place thereon, said means comprising a plurality of parts integral with the frame and engaging the four corners of the card.

1,375,684. CARBURETER. WILLIAM A. EDWARDS, Chicago, Ill., assignor, by mesne assignments, to William Reid, Chicago, Ill. Filed Nov. 15, 1915, Serial No. 61,505. Renewed Feb. 3, 1921.. Serial No. 442,543. 8 Claims. (Cl. 261—48.)



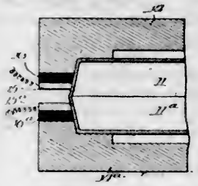
2. In a carbureter, the combination of a fuel valve, an air valve, and operative connections between said valves

including a fulcrum movable with said air valve and a lever attached at one end to said fuel valve and yieldably



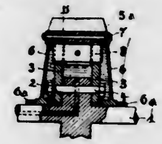
connected at its other end to said air valve whereby said fuel valve is controlled by the air valve.

1,375,685. MARKER. GEORGE WILLIAM ERICSON, Galesburg, Ill. Filed Sept. 2, 1920. Serial No. 407,678. 1 Claim. (Cl. 40—21.)



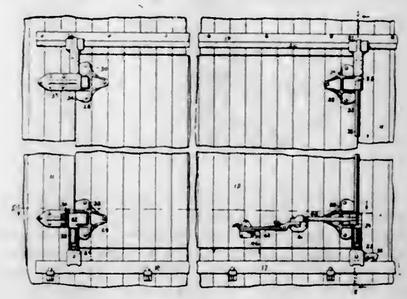
A marker fashioned from a plate disposed in tubular form and provided adjacent to one longitudinal edge with a plurality of openings, and provided along its opposite longitudinal edge with reduced tongues received in the openings and clenched on the plate, the tongues decreasing successively in length to facilitate the insertion of the tongues one at a time into the openings, the plate being equipped at its ends with inwardly projecting card holding fingers, there being an aperture in the plate, between the fingers, adapted to disclose a card held in the fingers.

1,375,686. CLAMP. AUGUST C. FELTON, La Salle, Ill. Filed July 13, 1920. Serial No. 396,029. 2 Claims. (Cl. 144—289.)



1. A clamp of the character specified comprising a pair of elongated bars forming clamp-supports and having a swivel connection at one end to permit of relatively angular adjustment in parallel planes, and clamp devices slidably mounted on the said supports and having clamp units individually adjustable longitudinally of the said bars.

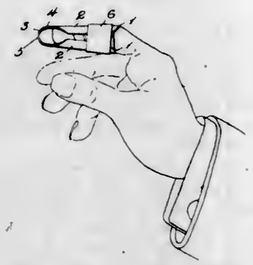
1,375,687. APPARATUS FOR ELECTRIC WELDING. GEORGE H. FORSYTH, Chicago, Ill. Filed May 3, 1915. Serial No. 25,355. 6 Claims. (Cl. 219—4.)



1. In an apparatus for welding articles having an extended line of abutting edges, clamping members arranged on opposite sides of and throughout the line of contact between the articles, and electrodes carried by said members, the electrical contact between the electrodes and the articles to be welded being confined locally adjacent the abutting edges.

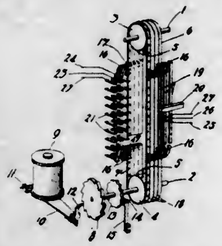
1,375,688. ARRANGEMENT FOR RESILIENT POWER TRANSMISSION. MAX FRIZ, Milbertshofen, near Munich, Bavaria, Germany, assignor to Bayerische Motoren Werke, Aktiengesellschaft, Munich, Bavaria, Germany. Filed Aug. 2, 1920. Serial No. 400,835. 9 Claims. (Cl. 74—29.)

1. In an arrangement for the prevention of injurious resonance effects in connection with resilient power transmission, a driving part, a driven part, and interposed means for resiliently transmitting the power from the driver to the driven, said means being of differing tension as regards direction and magnitude.



1,375,689. FLUSH CAR-DOOR. JOHN P. GALLAGHER, Jersey City, N. J., assignor to Victor Equipment Co., Inc., a Corporation of New York. Filed Aug. 17, 1917. Serial No. 186,678. Renewed Oct. 22, 1920. Serial No. 418,772. 4 Claims. (Cl. 20—23.)

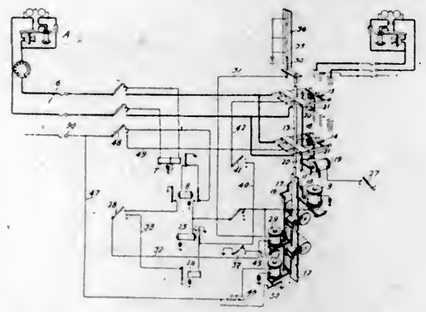
1. In a sliding door construction, the combination of a member provided with an opening, a track spaced out from said opening, a door guided to slide parallel to said track, a sliding journaling casing guided by said track, a horizontally disposed link having one end enlarged to form a knuckle, a vertically extending pin constituting a pivotal connection between the knuckle and the casing, pivotal means for connecting the opposite end of the link to said door, a stop spaced vertically from the casing so as not to be engaged by the same, said stop disposed to be engaged by the knuckle thereby to constitute a bear-



ing for the advanced end of the link during the swinging movement of the door into the opening when the door is moved forcefully along the track to cause the link to engage the stop, said stop being positioned in line with the pivotal means at the door engaging end of the link.

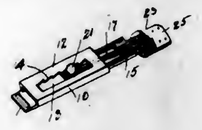
1,375,690. FINGER-GUARD. LEON W. GEORGE, St. Louis, Mo., assignor to Howe Safety Appliance Company, Granite City, Ill., a Corporation of Delaware. Filed Feb. 28, 1919. Serial No. 279,732. 2 Claims. (Cl. 2—104.)

1. As a new article of manufacture, a finger-guard formed of a single elongated strip of metallic material and, by permanent bending of the strip, comprising integrally a pair of spaced longitudinally disposed yielding leg-portions and a central portion joining the legs at one end, the leg-portions being transversely of opposed convexed curvature and the central portion being longitudinally gently rounded and arcuately cutaway at its opposite side-edges and thereby reduced in width relatively to the leg-portions, the leg-portions and the central portion being adapted to embrace and shield both the front, back, sides, and end of the finger.



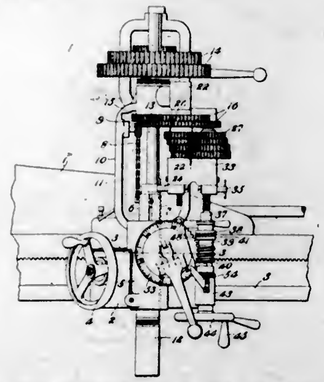
1,375,691. SELECTIVE SWITCH. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1917. Serial No. 190,367. 10 Claims. (Cl. 179—27.5.)

1. A selective switch having in combination, a pair of rotatable members, an endless carrier thereon having a driving engagement therewith, stationary circuit terminating feed members, a row of fixed circuit terminals, a plurality of brushes mounted on said carrier and arranged to make contact with the feed members and circuit terminals to electrically interconnect said feed members and circuit terminals, and means for operating said carrier.



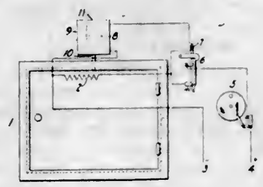
1,375,692. MACHINE-SWITCHING DEVICE. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1919. Serial No. 278,927. 11 Claims. (Cl. 179—27.5.)

1. In a telephone switching system, subscriber's impulse-sending mechanism, stationary contacts arranged in groups and sub-groups, a movable carriage, contacts mounted thereon, and step-by-step mechan'sm and power-drive mechanism operating directly upon said carriage



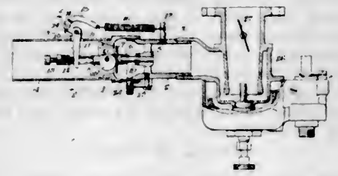
in response to the operation of said impulse-sending mechanism to move said movable contacts into engagement with a desired set of stationary contacts in a desired group and sub-group.

1,375,693. FASTENER. GEORGE E. GOODRICH, Providence, R. I. Filed Nov. 13, 1920. Serial No. 423,956. 3 Claims. (Cl. 24—206.)



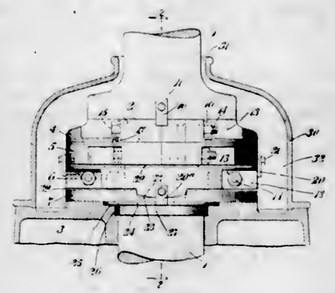
2. A garment fastener comprising a housing member, a plate member slidable in said housing, one of said members being provided with a pawl and the other with ratchet means for retaining them in relative adjusted position, means whereby one of said members may be permanently connected to a garment, a catch member adapted to be permanently connected to another portion of the garment, and means for detachably connecting one of said adjustable members to said catch member.

1,375,694. FEED MECHANISM. JAMES CLYDE HALDEMAN, Salem, Ohio, assignor to The Silver Manufacturing Company, Salem, Ohio, a Corporation of Ohio. Filed July 11, 1919. Serial No. 310,084. 6 Claims. (Cl. 77—33.)



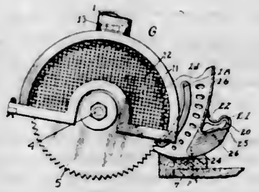
1. In feeding mechanism of the character described, the combination of a hand wheel shaft, a sleeve mounted upon the upper end of said shaft, a removable pin located through said sleeve and shaft, a shaft located in axial alinement with said hand wheel shaft and extending into said sleeve, a clutch member fixed upon the upper end of said sleeve, a co-acting clutch member slidably mounted upon the axially alined shaft and means for raising said last named shaft out of engagement with the sleeve.

1,375,695. OVEN. MARSHALL W. HANKS, Mount Vernon, N. Y., assignor to Hankscraft Company, a Corporation of Wisconsin. Filed Jan. 30, 1920. Serial No. 355,070. 6 Claims. (Cl. 219—20.)



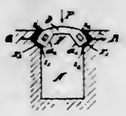
1. The combination with an electrically heated oven, of a circuit controlling means comprising a thermostat and a chamber containing the thermostat and connected to the oven by a relatively small conduit.

1,375,696. AUTOMATIC VALVE. HENRY HELLWEG, Milwaukee, Wis. Filed June 11, 1917. Serial No. 173,993. 8 Claims. (Cl. 251—145.)



1. An automatic valve adapted to be opened by fluid pressure and provided with a spring and lever tending to close the valve and arranged to oppose a diminishing resistance to its opening movement and act with increasing energy in its closing movement.

1,375,697. COMPENSATING BEARING. LOUIS JOSEPH HIRT, Yonkers, N. Y. Filed July 16, 1919. Serial No. 311,118. 5 Claims. (Cl. 64—25.)

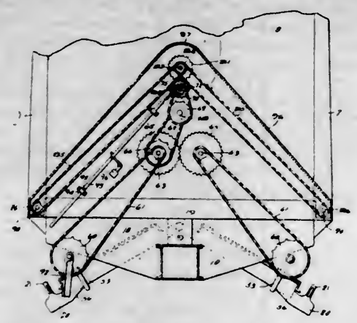


1. The combination with a shaft provided with a bearing flange and a bearing member spaced apart from said flange of a plurality of intermediate bearing members, one of which is diametrically and sidewise rockable on another, and another of which is diametrically and sidewise rockable, at right angles to such rocking movement, on another bearing member; said bearing members severally having opposed surfaces which are opposedly flat except where in rocking contact one with another, and comprising opposed rocking surfaces formed by interworking rocker lugs projecting from a flat surface and by rocker-lug receiving recesses reëntrant in a flat surface, the rocker lugs and their receiving recesses being dimensioned to space the opposed flat surfaces of the members apart when they are parallel one to another.

1,375,698. SAFETY-GUARD FOR SWING-SAWS. ANDREW F. HOWE, Granite City, Ill., assignor, by mesne assignments, to Howe Safety Appliance Company, Granite City, Ill., a Corporation of Illinois. Filed July 19, 1918. Serial No. 245,750. 2 Claims. (Cl. 143—159.)

1. An auxiliary safety-guard for oscillatory rotary-saws comprising integrally a segmental plate, an arcuate flange presented laterally from the peripheral margin of the plate and adapted to extend in spaced relation transversely across the teeth of the saw, and a riding-nose projecting forwardly beneath the flange, the nose having an elongated arcuate under face and rounded end and oblique side faces for the purposes specified.

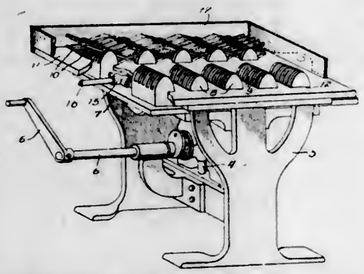
1,375,699. WEDGE OR KEY FOR SLOTTED DYNAMO-ELECTRIC-MACHINE ELEMENTS. MAX JOSEPH ILG, Nuremberg, Bavaria, Germany, assignor to Siemens-Schuckert Werke G. M. B. H., Siemensstadt, near Berlin, Germany. Filed May 27, 1915, Serial No. 30,844. Renewed Sept. 15, 1920. Serial No. 410,483. 10 Claims. (Cl. 171—252.)



1. A wedge or key for the slots of dynamo-electric machine elements, consisting of laminated magnetizable flanks, and bridges connecting said flanks, said bridges being of malleable material, whereby said wedge or key may be spread into its seat by deforming said bridges, substantially as described and for the purposes set forth.

1,375,700. DUMP-CAR. FRANK S. INGOLDSBY, Pasadena, Calif., assignor to The Ingoldsby Automatic Car Company, Cleveland, Ohio, a Corporation of West Virginia. Filed July 7, 1917. Serial No. 179,130. 27 Claims. (Cl. 105—244.)

1. In a dump car, the combination with hinged dumping doors having rigid extensions extending to the side of the car, locking means coacting with said extensions, a



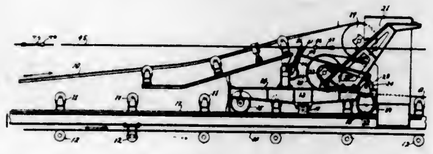
bar carrying locking devices and extending longitudinally along the car side, a screw rigid with the bar, a nut thereon having sprocket teeth, and a chain and sprocket gearing for actuating the nut.

1,375,701. AZO DYESTUFFS DYEING ON MORDANTS. CARL JAGERSPACHER, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Nov. 15, 1919. Serial No. 338,346. 2 Claims. (Cl. 8—1.)

1. As new products, the herein described azodyestuffs dyeing on mordants, derived from aromatic orthooxy-diazocompounds and 1:8-dioxynaphthalene-sulfocarboxylic acids, which constitute, in a dry state, black to dark brown powders dissolving in water with violet colorations and in concentrated sulfuric acid with violet to green-blue colorations, dye wool in an acid bath red brown to blue-violet tints becoming on subsequent chroming, fast blue and olive to black and produce, when printed on cotton with chromium mordants, fast blue to black tints.

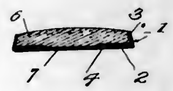
1,375,702. MOLDING BRAKE-SHOE INSERTS. HARRY JONES, Suffern, N. Y., assignor to The American Brake Shoe & Foundry Company, Wilmington, Del., a Corporation of Delaware. Filed July 24, 1920. Serial No. 398,692. 12 Claims. (Cl. 22—160.)

6. In a machine of the character described, the combination of a mold support, a pattern for the mold, means for withdrawing the pattern from the mold, and means for supplying an air blast through the pattern to the mold cavity.



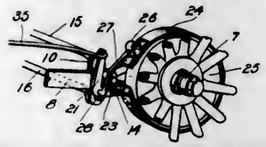
1,375,703. GREASE-CUP FOR LOCOMOTIVES. WILLIAM S. KEARNS, Duluth, Minn., assignor, by direct and mesne assignments, of one-fourth to Hugh B. Smith, St. Paul, Minn., and one-half to Peter Wertz, Pittsburgh, Pa. Filed Apr. 14, 1920. Serial No. 373,751. 3 Claims. (Cl. 184—48.)

2. The combination with a connecting rod strap, or the like, and a grease cup applied thereto, said grease cup being internally threaded, of a follower working with threaded engagement in said cup, and a lock for said follower in the form of a spring rod anchored to said cup and strap to prevent relative rotation thereof and having



a pawl-acting end working through a perforation in said cup and engageable with the threads of said follower, the said follower having a ratchet-like groove cut longitudinally through its threads.

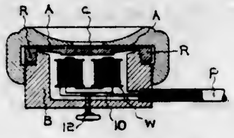
1,375,704. UNIFORMLY-DISTRIBUTING TRIPPER. MYRON A. KENDALL, Aurora, Ill., assignor to Stephens-Adamson Mfg. Co., Aurora, Ill., a Corporation of Illinois. Filed July 15, 1919. Serial No. 310,966. 3 Claims. (Cl. 193—25.)



1. In a tripper for belt conveyers, in combination, a wheeled truck, tripping belt pulleys mounted on the truck, a gear wheel mounted rigidly with one of the truck wheels, a countershaft, driving connection between one of the belt pulleys and such shaft, a gear wheel fixed on the shaft, a frame swinging about the shaft, a pair of intermeshing pinions carried by the frame, one thereof meshing with the gear fixed to the shaft, such pinions being so positioned that they may alternatively be brought into mesh with the gear wheel mounted with the truck, and means for swinging the frame.

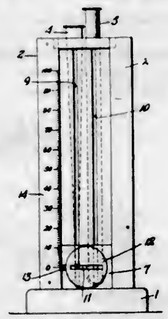
1,375,705. ROUGE-PAD. WILLIAM G. KENDALL, Newark, N. J. Filed Dec. 23, 1918. Serial No. 268,066. 3 Claims. (Cl. 132—82.)

3. As a new article of manufacture, a metallic pad comprising a shallow container having an opening in its bottom, a cosmetic cake anchored within the container, and a disk of absorbent material disposed between the cake and the bottom of the container and having a portion exposed at the exterior of the pad through said opening.



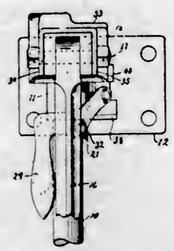
1,375,706. VEHICLE-BRAKE. HENRY KIMMET, Kansas City, Mo., assignor to The Liberty Manufacturing & Sales Company, Kansas City, Mo., a Corporation of Missouri. Filed Feb. 11, 1919. Serial No. 276,350. 4 Claims. (Cl. 188—18.)

1. In a braking mechanism for attachment to motor vehicles, radius rod engaging brackets consisting of



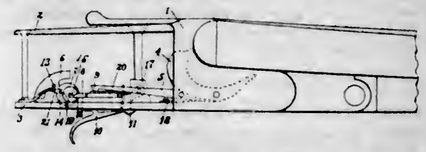
spaced plates to engage opposite sides of the respective radius rods, transversely extending tie bars connecting said brackets, spindles on said brackets, brake actuating levers carried by the spindles, and means for actuating said levers.

1,375,707. TUNING OF DIAPHRAGMS FOR GENERATING OR RECEIVING SOUND-WAVES. LOUIS VESSOT KING, Montreal, Quebec, Canada. Filed Apr. 1, 1919. Serial No. 286,805. 7 Claims. (Cl. 179—181.)



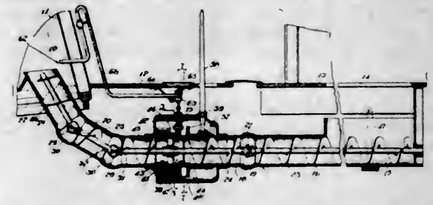
1. The combination with a diaphragm having a practically rigid central effective area supported by a relatively thin annular surrounding portion whose tension determines the pitch of the vibrations of the central area, and means whereby the said central area is adjusted by the application of gaseous pressure or suction.

1,375,708. COLORIMETER. ROBERT E. KLETT, Ridgefield Park, N. J. Filed Aug. 25, 1920. Serial No. 405,857. 8 Claims. (Cl. 88—14.)



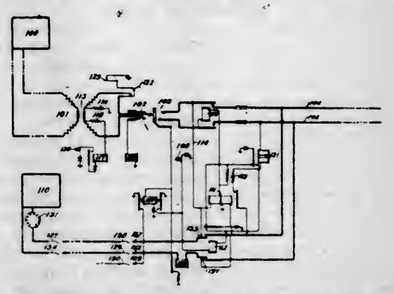
1. A colorimeter comprising a stand carrying a stationary diaphragm having longitudinal slots, a standard solution tube comprising a light transmitting plate having a diagonally cut tube fused thereto along its cut portion so as to provide a longitudinal section of varying thickness, located behind one slot, an unknown solution tube behind the other slot, an eye piece, and means for bringing the beams from said two tubes adjacent each other at the eye piece.

1,375,709. BRAKE-HANDLE. NELS KROHN, Chicago, Ill., assignor to The Adams & Westlake Company, a Corporation of Illinois. Filed June 3, 1919. Serial No. 301,501. 21 Claims. (Cl. 74—114.)



21. In a brake handle, in combination, a vertical staff, a wheel fixed to said staff, a head oscillatable about said staff, and wedging means carried by said head movable in a path tangential to said wheel and gravity urged toward said wheel.

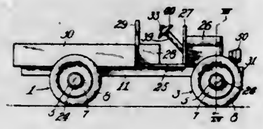
1,375,710. SINGLE-TRIGGER MECHANISM FOR DOUBLE-BARREL GUNS. CHARLES W. LINDSAY, Houston, Tex. Filed July 1, 1919. Serial No. 307,996. 4 Claims. (Cl. 42—42.)



1. A single trigger mechanism of the character described including hammer controlling sears, a trigger formed into a common sear actuating means, a pivoted crescent shaped detent arranged to be actuated by the trigger and locking the trigger after releasing one of the sears from its hammer, a detent locking mechanism automatically disengaging upon release of the trigger to permit the further movement of the trigger whereby the common sear-actuating means is brought into engagement with, and actuates, the other sear.

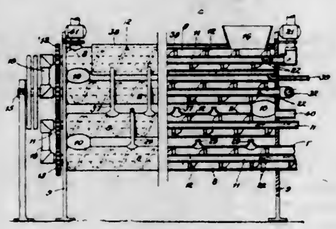
1,375,711. LOCOMOTIVE-STOKER. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed May 26, 1917. Serial No. 171,209. 16 Claims. (Cl. 110—104.)

16. A stoker comprising, in combination, a fire-box, means to deliver fuel into said fire-box, and means to scatter said fuel as delivered, comprising a continuous blast of fluid under pressure which blast is of undulating intensity.



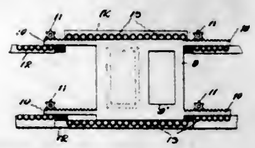
1,375,712. TELEPHONE-EXCHANGE SYSTEM. ALBEN E. LUNDELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1918. Serial No. 224,497. 13 Claims. (Cl. 179—27.)

1. In a telephone exchange system, subscribers' telephone lines, a trunk circuit, a connecting circuit associated with said trunk circuit, selective switches arranged to extend said connecting circuit to a called line, switching means for associating a calling line with said trunk



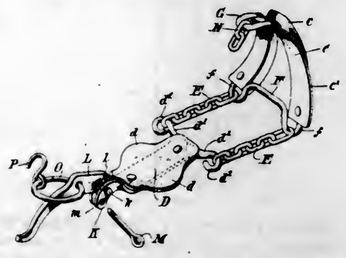
circuit, means associated with a calling line for producing current impulses, said trunk circuit being arranged to transmit said impulses over its two conductors in series, means responsive to such impulses for operating said selective switches, said trunk circuit being electrically disconnected from the calling line and said connecting circuit during the transmission of impulses, connecting means operated upon the response of the called subscriber for connecting said trunk to said connecting circuit, and a second connecting means responsive to the operation of said first connecting means for connecting said calling line to the trunk circuit.

1,375,713. TOY MOTOR-VEHICLE. WALTER O. MCDANIEL, Indianapolis, Ind., assignor to The H-K Toy & Novelty Co., Indianapolis, Ind., a Corporation of Indiana. Filed June 15, 1918. Serial No. 240,256. 5 Claims. (Cl. 208—165.)



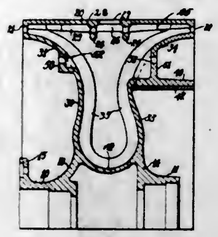
1. In a toy motor vehicle, a front axle comprising a wooden axle bar having a slot extending horizontally in each of its two opposite ends, two wooden stub axle bodies having each a relatively thin pivot ear on one end and a socket bored horizontally in the opposite end thereof, the latter end being squared, the ears being arranged in said slots respectively and pivoted to the axle bar, and wooden axle journals secured in said sockets respectively and having each a collar integral therewith.

1,375,714. CARBONIZING APPARATUS. HECTOR NORMAN MCLEOD, Wellington, New Zealand. Filed Dec. 18, 1920. Serial No. 431,730. 12 Claims. (Cl. 202—9.)



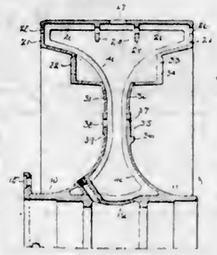
1. Apparatus for carbonization and for the recovery of valuable distillation products from carbonaceous materials, said apparatus comprising a plurality of chambers disposed in a series such that the discharge end of one chamber leads into the receiving end of the next chamber in the series, said chambers being divided into two sets with separate heating circuits therefor, the heating circuit of the second set of chambers comprising a primary source of heated gas and conduits receiving such heated gas whose walls are in contact with the material in the chambers of the said second set, the direction of flow of the heated gas through said conduits being in countercurrent to the direction of passage of the material through the chambers of the second set, condensing apparatus with connections leading from the last chamber of the second set adapted for receiving the products of distillation from said last chamber, jackets upon said condensing apparatus adapted to allow of the passage of a cooling medium for taking up heat from the products to be condensed, and conduits whose walls are in contact with the material in the chambers of the said first set of chambers, said conduits receiving the heated cooling medium from the jackets of the condensing apparatus and conveying it in countercurrent to the direction of movement of the material to be carbonized through such chambers of the first set, and conveying means adapted to propel the material to be carbonized continuously through the chambers of the first set and then through the chambers of the second set.

1,375,715. DIVING APPARATUS. YOSHIO MATSUMURA, Tokyo, Japan. Filed Aug. 14, 1918. Serial No. 249,890. 3 Claims. (Cl. 61—69.)



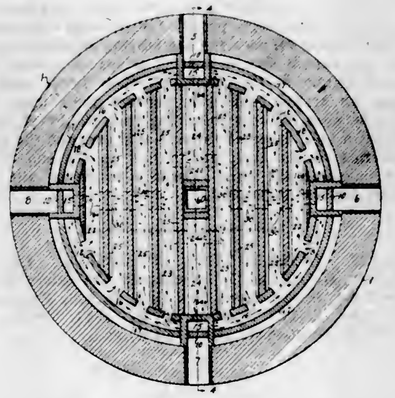
1. In diving apparatus, a shell having an outer wall provided with a door opening and an inner wall spaced from the outer wall and also having a door opening opposite that of the outer wall, a sliding door arranged in the space between the inner and outer shells and having an opening adapted to register with the first named openings when said door is in one position, and means to operate said door.

1,375,716. MUD-GRIP FOR AUTOMOBILE-WHEELS. VACLAV MIKULECKY, Verdigre, Nebr. Filed Nov. 13, 1920. Serial No. 423,823. 3 Claims. (Cl. 152—14.)



1. A mud grip comprising a V-shaped gripping member having a cross-piece for bracing the outer ends of the arms of the V, locking devices, short lengths of chain connecting the locking devices with said cross-piece, and a short length of chain connecting the locking devices with the opposite end of the gripping member.

1,375,717. VEHICLE-WHEEL. VAN ZANDT M. MOORE, Cleveland Heights, Ohio. Filed Aug. 20, 1917. Serial No. 187,145. 9 Claims. (Cl. 301—65.)



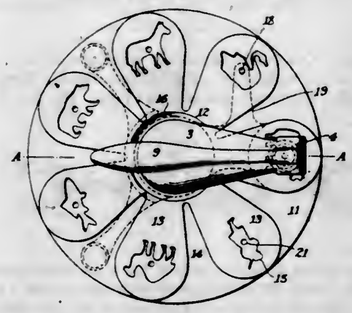
3. In a cast metal wheel, the combination of a hub, a rim with edge flanges, two webs connecting the hub with said edge flanges, a pair of annular ribs formed on the inner face of the rim, diagonal stiffening ribs on the inner face of the rim between the annular ribs and the edge flanges, and transverse stiffening ribs on the inner face of the rim between the two annular ribs.

1,375,718. VEHICLE-WHEEL. VAN ZANDT M. MOORE, Cleveland, Ohio. Filed Oct. 5, 1918. Serial No. 256,951. 13 Claims. (Cl. 301—65.)

1. In a wheel, the combination of a hub, a rim, two webs connecting the hub and rim, and a narrow bracing rib formed on the inner face of each web and extending longitudinally of the axes across and in engagement with the outer face of the intermediate portion of the hub, the rib portions which are on the inner faces of the two webs being out of contact with each other.

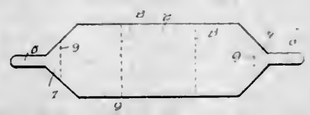
1,375,719. BRICK-KILN. FRANK MUNHOLLON, Cleveland, Ohio. Filed Dec. 29, 1919. Serial No. 348,141. 12 Claims. (Cl. 25—135.)

1. A brick kiln having a series of furnaces spaced about the outer wall thereof, a floor having substantially uniform space therein, transverse passages beneath the floor, and passages connecting these transverse passages with the furnaces, and having openings into the transverse passages varied in size with relation to the distance from the furnaces.



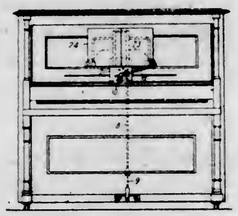
1,375,720. SIGNALING DEVICE FOR VEHICLES. JESUS B. MUÑIZ; Habana, Cuba. Filed Sept. 23, 1919. Serial No. 325,663. 3 Claims. (Cl. 40—77.)

1. In a traffic signaling device, a casing having an opening in one wall and also having an opening in the opposite wall and a removable closure for the last named opening; a shaft mounted for rotation in bearing openings in the first-named wall and said closure, a signal-



bearing disk on said shaft, and means detachably secured on the ends of the shaft to hold the closure in place and prevent casual endwise movement of the shaft.

1,375,721. TOY. EDGAR B. NICHOLS, Rochester, N. Y. Filed Dec. 16, 1919. Serial No. 345,429. 10 Claims. (Cl. 164—26.)

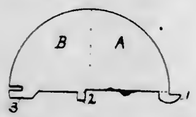


1. A toy for cutting out figures from sheet material comprising a base and a head projecting therefrom; a platen guided in the head, and provided with operating means; a set of dies fitting loosely and revoluble on said head, the dies comprising a pair of plates fixed together; radial tongues on one of said plates having perforations; slugs fixed to the other plate and adapted to register with corresponding perforations in the tongues; and means for holding any desired tongue under the platen.

1,375,722. BERRY-BOX. EDWARD ETTINGER OGDEN, Hoquiam, Wash. Filed Sept. 22, 1920. Serial No. 412,016. 1 Claim. (Cl. 229—23.)

A box comprising a frame having walls provided with oppositely located notches uniformly enlarged toward their upper ends and opening out through the upper edge of the frame, a bottom having upstanding sides provided with reduced triangular portions arranged exteriorly of said frame and closing said notches, the edge portions of said reduced portions being extended beyond the side walls of said notches, and narrow downwardly directed tongues formed at the lower ends of said reduced portions and extended through the lower ends of said notches, said narrow downwardly directed tongues being detachably arranged between the inner sides of the frame and the adjacent sides of said bottom.

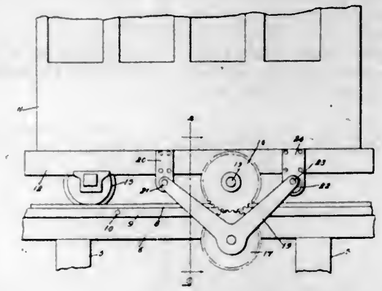
1,375,723. LEAF-TURNING DEVICE. OLOF WILLIAM OLSON, New York, N. Y., assignor of one-half to August W. Anderson, New York, N. Y. Filed July 17, 1919. Serial No. 311,646. 11 Claims. (Cl. 84—520.)



1. In a leaf turning device, a rack, a telescopic arm to move back and forth across said rack, a support for said parts, a rotary device comprising a four armed wheel carried by said arm, and a plurality of stationary means to respectively differentially turn the rotary device when the arm moves in one direction and to allow the latter to move in the other direction without turning.

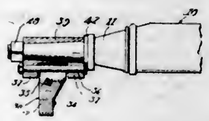
1,375,724. COUPLING-HOOK. STANLEY OPONIAK and AUGUST H. RAINFTLEN, Plantsville, Conn. Filed Jan. 11, 1921. Serial No. 436,407. 1 Claim. (Cl. 24—230.5.)

Two coupling S hooks, both of the same shape and form and both formed from wire, and each comprising a medial portion with an eye at one end and a hook at the other end, the ends of the hooks being taper-pointed, and the points separated from the medial portion to an extent less than the diameter of the wire from which the devices are formed, so that, when the points are brought together at the proper angle, the points will pass, whereby the two hooks may be engaged or disengaged.



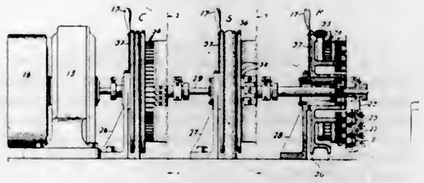
1,375,725. CONTAINER-SPOUT. FRANCIS C. OSBORN, Detroit, Mich. Filed June 17, 1916. Serial No. 104,300. 5 Claims. (Cl. 221—11.)

1. In combination with the top plate of a pivoted container spout, a rearwardly extending tongue integral with the rear edge of the plate and having a laterally extending portion extending laterally beyond said edge and the body of the spout and adapted to coöperate with the inner surface of the container laterally beyond the body of the spout as a hinge pivot.



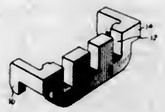
1,375,726. RAILWAY. MATHIAS A. PATTON, Salt Lake City, Utah. Filed Jan. 27, 1921. Serial No. 440,472. 4 Claims. (Cl. 105—30.)

4. In combination with a track having auxiliary rails, a truck adapted to move on the track, a wheel supported by the truck, and adapted to move on the auxiliary rail, means carried by the truck and adapted to engage the



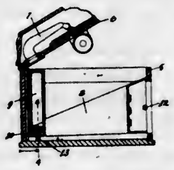
under side of the auxiliary rails, and means for moving the last mentioned means into and out of operation.

1,375,727. RUNNER ATTACHMENT. CARL J. PETERSON, Eldridge, N. D. Filed Feb. 25, 1920. Serial No. 361,115. 1 Claim. (Cl. 280—14.)



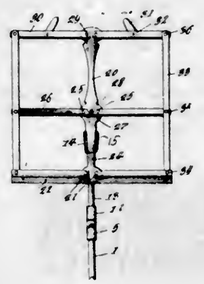
A runner attachment for the axles of wheeled vehicles consisting of a runner, upper and lower bearing members constructed to rotatably receive the axle between them, the lower member being provided at its ends with depending ears, means for securing the bearing members together about the axle, a knee consisting of spaced vertical arms secured rigidly to the runner at their lower ends and having an arched connection between their upper ends fitting between the ears depending from the lower bearing member, a pivot inserted through said ears and the arched connection of the knee, and means on the end of said pivot engaging the ears exteriorly to secure the pivot against endwise movement.

1,375,728. DISTRIBUTING APPARATUS. PAUL M. RAINEY, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 28, 1917. Serial No. 188,587. 2 Claims. (Cl. 178—53.)



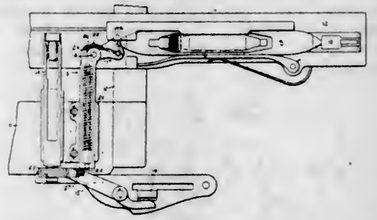
1. A distributing apparatus comprising a rotatable head, a distributer face carried by said head, segments on said face, a cable containing a plurality of flexible conductors, the conductors of said cable being connected directly to said segments, and means whereby said head may be rotated without altering the connections to said segments.

1,375,729. WARP-STOP-MOTION FRAME. JOHN REGAN, New Bedford, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1920. Serial No. 374,026. 2 Claims. (Cl. 139—92.)



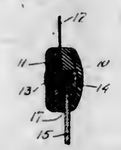
1. A warp stop motion frame comprising fixed end plates, a plurality of drop wire separator bars and supports for said bars, said end plates and said supports having coöperating engaging portions by which said supports may be detachably mounted on said frames.

1,375,730. PHONOGRAPH. GEORGE M. RENTZ, Wells, Minn. Filed Apr. 8, 1920. Serial No. 372,379. 3 Claims. (Cl. 274—2.)



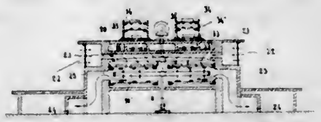
1. In a sound reproducing machine and cabinet therefore, a sound amplifying horn suspended within said cabinet, means for pivotally supporting the front end of said horn, and resilient means for supporting the rear end of said horn.

1,375,731. COPY-HOLDER. APOLINAR RESTREPO, Medellin, Colombia. Filed July 16, 1919. Serial No. 311,344. 1 Claim. (Cl. 120—28.)



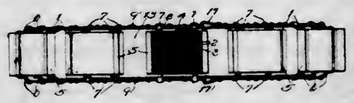
A copy holder comprising a rack consisting of an upright central shank, a series of transverse members made in pairs pivoted at their inner ends at different points on said shanks, means pivotally connecting their outer ends, the inner extremities of one pair of said members projecting beyond their pivot and provided with shoulders and adapted to abut when said members are disposed in alinement with each other, and a stop on said shank against which said shoulders abut as the members are disposed in alinement.

1,375,732. SHUTTLE-PLACER. EPPA H. RYON, Waltham, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 12, 1918. Serial No. 244,638. 6 Claims. (Cl. 139—85.)



1. In a loom, a movable support and a shuttle placer mounted thereon and normally at rest, said shuttle placer receiving an angular shuttle positioning movement by engagement with a slightly misplaced shuttle.

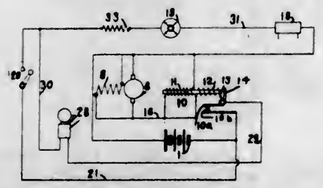
1,375,733. AUTO-TOP WINDOW-FRAME. JOSEPH R. SANFORD, Salisbury, Conn. Filed Apr. 1, 1920. Serial No. 370,556. 5 Claims. (Cl. 296—145.)



2. As an article of manufacture, a frame of the character described, comprising a rubber part, a glass window removably secured thereto, a second part, and a series of screws for clamping the two parts together with the fabric between them.

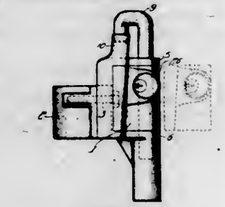
1,375,734. MACHINE FOR COOLING CHOCOLATE AND OTHER MATERIALS. EMILE SAVY, Paris, France. Filed Mar. 1, 1919. Serial No. 280,173. 8 Claims. (Cl. 34—12.)

1. In apparatus of the class described, a casing, a source of cooled air communicating with said casing intermediate the ends thereof, means for drawing cooled air into said casing through the source of supply therefor, two conveyers mounted to travel side by side in said casing, a series of upstanding drive shafts between the two conveyers, and fans on each shaft arranged above and below the conveyers and each serving to agitate the air about both conveyers.

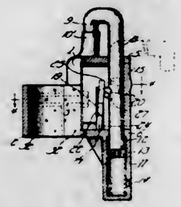


1,375,735. ANTISKID DEVICE. MICHAEL F. SCHOPF and LOUIS J. CHRISTIANSON, Chicago, Ill. Filed Apr. 21, 1920. Serial No. 375,571. 3 Claims. (Cl. 152—14.)

3. An anti-skid device comprising a plurality of anti-skid pads adapted to be disposed around a tire, each of



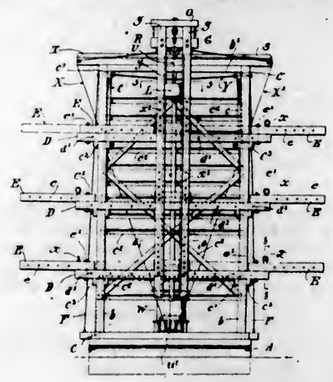
said pads having a base provided with sides, a plurality of wire strands secured to the sides of each pad, said strands being constructed to cross one another, and means for securing the pads to the tire.

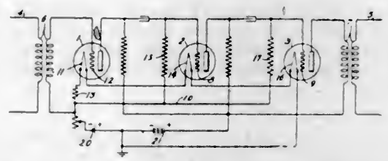


1,375,736. IGNITION SYSTEM. ELMER H. SCHWARZ, Glen Rock, N. J., assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Nov. 22, 1917. Serial No. 203,314. 7 Claims. (Cl. 290—35.)

7. In an electrical system, the combination with a battery and a generator for charging the same; ignition devices having electrical connections with the battery; a switch for controlling the ignition circuit, automatic means for disconnecting the battery from the generator when the voltage of the generator is lower than the voltage of the battery; and a signaling device operable after the battery voltage exceeds the generator voltage, said device being operative only as long as the ignition switch remains closed.

1,375,737. AUTOMOBILE-LOCK. JOHN F. SCHYLANDER, Chicago, Ill., assignor of one-half to Frank A. Diener, Chicago, Ill. Filed Oct. 31, 1919. Serial No. 334,825. 11 Claims. (Cl. 70—129.)

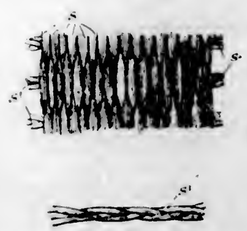




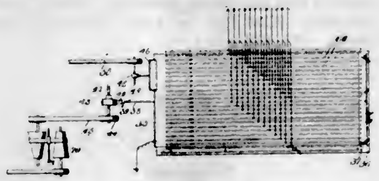
1. A steering wheel lock of the character described comprising a base plate having a surface adapted to conform to a steering column, a clamping member coöperating with said plate for securing said parts together around the steering column, a locking bar slidably supported by said base plate, a locking plate for maintaining said locking bar in a locked position, said locking plate being supported upon the base plate and maintained in position by said locking bar.

1,375,738. PILE-DRIVER. NATHANIEL G. SCOTT, New Orleans, La. Filed Oct. 7, 1920. Serial No. 415,420. 5 Claims. (Cl. 61—74.)

1. A pile driver comprising shears composed of a vertical front frame having side pieces, a cross piece secured to the upper ends of the side pieces, a moon beam to which the lower ends of the side pieces are secured, a vertical intervening series of horizontally arranged cross pieces arranged at intervals between the top and bottom of the shears, and which have extensions projecting beyond the side pieces, hammer leads, a trolley frame connected to the upper end of the leads and supported on the top of the shears, means for moving the trolley across the shears, and means for securing the leads to those portions of the intervening cross pieces between the sides of the shears and also to their extensions.



1,375,739. VACUUM-TUBE APPARATUS. EDWARD O. SCRIVEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 27, 1918, Serial No. 242,183. Renewed Sept. 14, 1920. Serial No. 410,082. 6 Claims. (Cl. 179—171.)



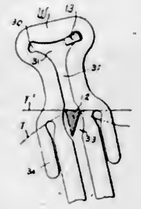
1. A vacuum tube apparatus comprising a plurality of tubes arranged in a series and each having a cathode and a grid, and means for applying to the grid of one of said tubes the potential across the cathode of another tube.

1,375,740. SEPARATOR FOR STORAGE BATTERIES. WALTER MARION STUDEBAKER and HERBERT JOHN EPPLE, Erie, Pa. Filed July 17, 1920. Serial No. 397,034. 2 Claims. (Cl. 204—29.)

1. A separator comprising strands of spun glass arranged in intersecting groups, the groups of strands extending in one direction being plaited, and the strands of the groups extending in the other direction being trained over and under the groups of strands which extend in the first direction.

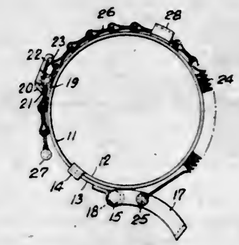
1,375,741. PROCESS OF AND APPARATUS FOR PROGRESSIVE ELECTROSTATIC SEPARATION OF COMMINUTED MATERIAL. HENRY M. SUTTON, WALTER L. STEELE, and EDWIN G. STEELE, Dallas, Tex. Filed Aug. 19, 1914, Serial No. 857,528. Renewed Sept. 21, 1920. Serial No. 411,811. 32 Claims. (Cl. 83—49.)

1. The process of separating comminuted material according to the electrical susceptibilities of the particles thereof, consisting in subjecting successively the material to be separated to a series of electro-static charges moving independent of their seats of energy, and separately collecting the thus separated particles.



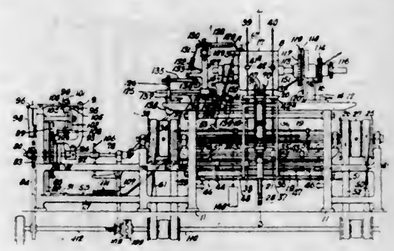
1,375,742. BOOK-FILLER. AUGUSTUS ROBERT TOWERS, Richmond, Va. Filed July 29, 1920. Serial No. 399,674. 5 Claims. (Cl. 281—19.)

1. A book comprising leaves, a flexible element secured to the leaves and extending beyond the same, and a back section embraced by the extended portions of said flexible element.



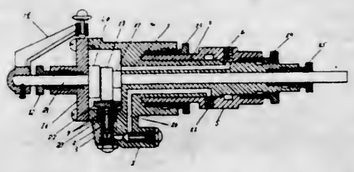
3. A book comprising leaves, a flexible element secured to the leaves and extending beyond opposite sides of the same, a back section embraced by the extended portions of said flexible element, and covers having attaching portions arranged on opposite sides of said back section and securely engaging the extended portions of said flexible element.

1,375,743. WARP STOP-MOTION. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1920. Serial No. 359,834. 9 Claims. (Cl. 139—92.)



2. In a loom, a warp stop-motion comprising a plurality of drop wires supported for substantial angular movement, an indicating bar extending through said drop wires and having a free angular indicating movement when said drop wires are in mid-position but held from such movement when said drop wires are substantially displaced angularly in either direction, means to move said indicating bar, a connection effective to cause stoppage of the loom when displaced longitudinally in either direction, and means to effect such displacement when free angular indicating movement of the said bar is prevented.

1,375,744. PISTON-INSERTING DEVICE. ALBERT E. WATTS, Montreal, Quebec, Canada. Filed Feb. 6, 1920. Serial No. 356,726. 8 Claims. (Cl. 29—86.4.)

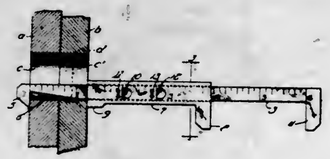


1. A band adapted to encircle a piston and the rings thereof, and contracting means encircling said band.

1,375,745. ARMATURE-WINDING MACHINE. LEONARD E. WOOD, Valleyfield, Quebec, Canada. Filed Sept. 30, 1918. Serial No. 256,279. 26 Claims. (Cl. 242—13.)

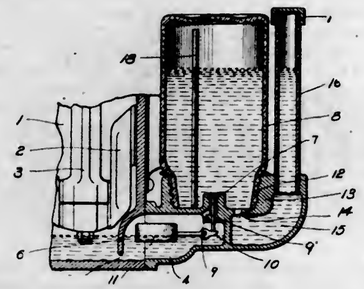
1. In an armature winding machine, an armature support, a wire guide, means for moving the guide to wind coils of wire in the slots of an armature, counting mechanism for automatically stopping the guide moving means on the completion of each coil and for automatically starting it to wind a new coil, and means for automatically moving the armature between the stopping and starting of the guide moving means to present fresh slots for winding and means for engaging and holding each successive turn of wire as it is laid in the armature slots.

1,375,746. ADVANCE AND RETARD FUEL-OIL PUMP. WILLARD JAY WOODCOCK, Brooklyn, N. Y. Filed Nov. 25, 1919. Serial No. 340,661. 3 Claims. (Cl. 123—139.)



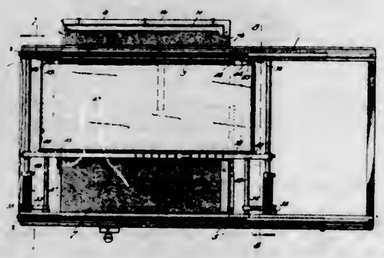
3. In an internal combustion engine, a fuel pump consisting of a cylinder, a plunger in said cylinder, means to actuate said plunger, and a support for said cylinder adapted to move about said actuating means, and concentric with said actuating means.

1,375,747. RIVET-GAGE. MARTIN ZIGRAY, Chicago, Ill. Filed Oct. 22, 1919. Serial No. 332,399. 11 Claims. (Cl. 33—143.)



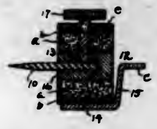
1. A rivet gage of the character described comprising a scale member having an extending arm at one end and

a hook shaped member at its other end, said scale member being provided with oppositely directed scales on the opposite sides thereof running from said arm to said hook



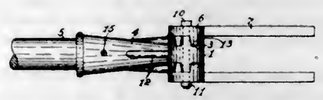
shaped member, and a slidable member freely movable on said scale member from one end to the other end thereof and adapted to coöperate with either of said scales for measuring purposes.

1,375,748. AUTOMATIC OIL-FEED. EVERETT B. CUSHMAN, Topeka, Kans., assignor to The Piersen Manufacturing Company, Topeka, Kans., a Corporation of Kansas. Filed May 21, 1919. Serial No. 298,633. 11 Claims. (Cl. 184—103.)



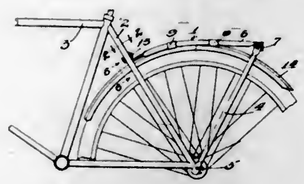
8. In a device of the class described, a float chamber adapted to discharge into the crank case of a motor, a recessed member above the float chamber and having an orifice communicating therewith, a removable, inverted glass jar received in the recessed member, a float, a float-actuated valve in the orifice for controlling the discharge of oil from the container into the float chamber, and a filling chamber in constant communication with the jar through an opening in the floor of the recessed member.

1,375,749. PLATEN EQUIPMENT FOR TYPEWRITING-MACHINES. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, Harrisburg, Pa., a Corporation of Delaware. Original application filed Feb. 6, 1911, Serial No. 606,933. Divided and this application filed June 11, 1918. Serial No. 239,488. 15 Claims. (Cl. 197—126.)



1. The combination with a flat platen adapted to have web sections disposed thereover, of means for effecting movement of the platen, and means for causing a separation of the web sections from each other and from the platen on the movement of said platen.

1,375,750. STYLUS-BAR ATTACHMENT FOR PHONOGRAPHS. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr., a Corporation. Filed July 14, 1920. Serial No. 396,263. 5 Claims. (Cl. 274—37.)

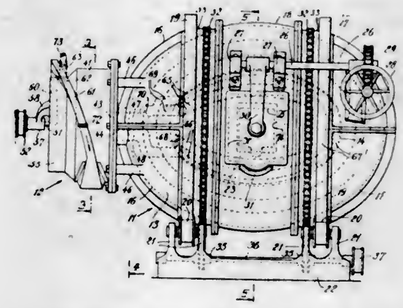


1. In a stylus bar attachment for phonographs, a metallic, cylindrical casing open at one side and provided opposite to its open side with an angular shank for engaging the stylus bar, a metallic core centrally of said casing, a stylus in line with the axis and carried by said core, a sleeve of vibration-absorbing material between the metallic core and casing, and a set-screw between the sides of the casing traversing the sleeve and metallic core for engaging the stylus, said angular shank having a terminal adapted to be disposed in line with the stylus and stylus bar.

1,375,751. ADJUSTABLE IMPLEMENT. ARTHUR W. GRANNIS, Waterloo, Iowa. Filed June 19, 1920. Serial No. 390,222. 3 Claims. (Cl. 254—25.)

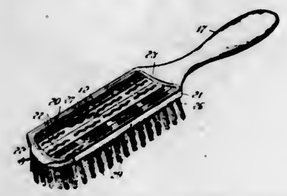
1. An implement of the character described, comprising a lever provided with a cross-head having oppositely-directed clutch-faces, mating clutch-members engaged adjustably with the clutch-faces of the cross-head, and prying members integral with and extending from said clutch-members in parallel spaced relation.

1,375,752. BICYCLE LUGGAGE-CARRIER. WALTER R. GREEN, Chicago, Ill. Filed Apr. 17, 1919. Serial No. 290,753. 6 Claims. (Cl. 224—39.)



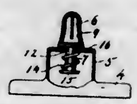
1. A cycle carrier comprising in combination a platform having its forward part curved to substantially the same extent as the mud guard, an angle member on the forward edge of the platform adapted to be secured to the rear fork, projections secured to said edge adapted to extend under the cross member of said fork to which the mud guard is connected, a cross piece adapted to rest against the front face of the rear fork, and means for clamping said angle member and said cross piece together to grip the rear fork therebetween, said means being adapted to extend through the fork immediately above the said cross member.

1,375,753. TIRE-CARRIER. WALTER R. GREEN, Chicago, Ill. Filed July 7, 1919. Serial No. 308,960. 12 Claims. (Cl. 224—29.)



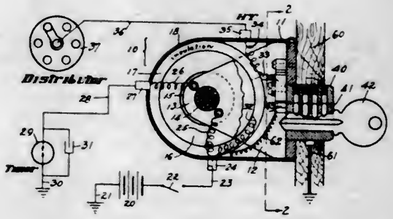
1. A tire carrier casing comprising complemental associated members to interfit with one another to form an annular tire casing and inner and outer spacing elements adapted to be attached therebetween effecting enlargement of the tire carrier.

1,375,754. METALLURGICAL FURNACE. JOHN WILLIAM GRISWOLD and HENRY O. LOEBELL, Toledo, Ohio. Filed July 24, 1918. Serial No. 246,455. 13 Claims. (Cl. 263—16.)



1. A metallurgical furnace having in combination a furnace body rotatably mounted for pouring, a closed melting chamber formed in said body, a series of combustion flues in said body, surrounding said melting chamber, and means for introducing and igniting gas and air only in the flues in the upper portion of said chamber, and withdrawing the products of combustion through a heat interchanger.

1,375,755. BRUSH AND METHOD OF MAKING THE SAME. ROLLAND T. R. HASTINGS, Highland Park, Ill., assignor to Sanitax Brush Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1920. Serial No. 395,518. 4 Claims. (Cl. 15—29.)



1. In a process for making brushes, the operations of transversely cutting a metal tube part way through at a point intermediate of its length, slitting the tube longitudinally from one end to a point near the center of said transverse cut, bending the portions of the tube on each side of said longitudinal slit away from each other, forming said portions and the intervening metal into a portion to provide a back for the bristle carrying frame, and shaping the metal of the uncut portion of the tube into a handle.

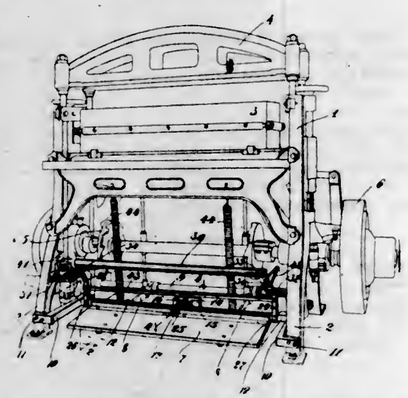
1,375,756. TURNBUTTON-FASTENER. GEORGE A. HOLMES, Newton Center, Mass., assignor to Fred Joy, Winchester, Mass. Filed Feb. 26, 1921. Serial No. 448,159. 2 Claims. (Cl. 24—221.)

1. In a fastener of the character set forth, a standing member composed of a base having a shank oval in sectional shape; combined with a button composed of a hollow shell of corresponding oval shape, and a pintle piece having a base flange of corresponding oval shape secured in said shell by engagement by the marginal part thereof, and a filler in said shell serving as a support for said pintle piece; and a spring interposed between the inner surface of the base shank and an enlargement on the pintle substantially as described.

1,375,757. LOCKING DEVICE FOR IGNITION SYSTEMS. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Aug. 5, 1918. Serial No. 248,308. 5 Claims. (Cl. 123—146.5.)

1. In an ignition system, the combination with a distributer, a battery and a timer; of a unitary structure including a housing, an ignition coil adapted to be connected with the battery, timer and distributer, located within the housing, and a lock operated device located within the housing for short circuiting the distributer.

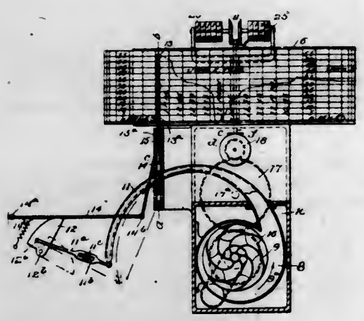
1,375,758. IMPERMEABLE RESERVATORY. GEORGE COLVIN KENNEDY, Waterloo, Iowa. Filed Aug. 22, 1919. Serial No. 319,188. 2 Claims. (Cl. 27—6.)



1. An impermeable hollow container, comprising hollow imperforate parts having outwardly sloping margins registering with each other terminally, a sectional detachable clamping device whose sections are longitudinally troughed with sloping inner walls to inclose said sloping margins in spaced relation, compressible impermeable sealing strips mounted in the interspace of said clamp-

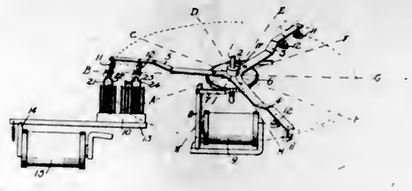
ing device and said sloping margins, and means for detachably fastening the sections of said clamping device together to compress said strips upon said sloping margins.

1,375,759. MANUFACTURE OF SULFATE PULP. ELIS OLSSON, Westpoint, Va. Filed Apr. 2, 1919. Serial No. 286,938. 3 Claims. (Cl. 92—9.)



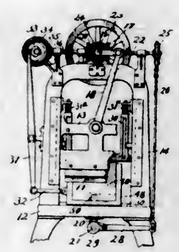
1. In the manufacture of sulfate pulp a cooking liquor including sodium hydrate and sodium sulfid, the sodium sulfid being the predominant solvent.

1,375,760. SAFETY DEVICE FOR POWER-PRESSES. ABRAHAM PIASER, Elmhurst, N. Y., assignor to Rosenwasser Bros. Inc., Astoria, Long Island, N. Y., a Corporation of New York. Filed Dec. 18, 1919. Serial No. 345,852. 8 Claims. (Cl. 74—81.)



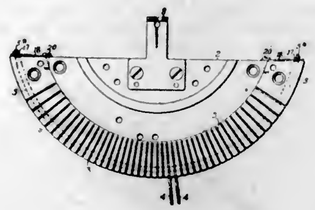
1. The combination with a power press, having a treadle whose depression determines an operation thereof, of means for normally locking said treadle against depression, and means adapted to be engaged by the leg of the operator for releasing said locking means.

1,375,761. SPEEDOMETER FOR AUTOMOBILES. FREDERICK H. RITTENOUR, Annapolis, Md. Filed June 6, 1918. Serial No. 238,504. 5 Claims. (Cl. 234—29.)



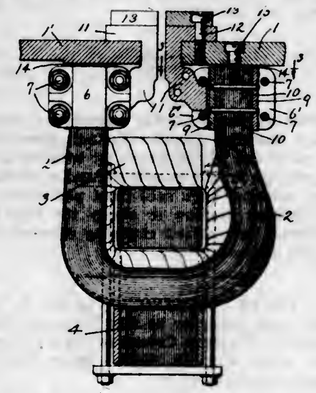
3. A speedometer for automobiles comprising a moving tape, a pencil and means for moving the pencil over the tape, in a direction transverse to the movement of the tape, said means comprising a curved flattened flexible tube, a pump for forcing a liquid into said tube and connections from the tube to the pencil, comprising a cam operated by the change of form of the tube caused by the pressure of liquid therein.

1,375,762. DISTRIBUTING-SWITCH. GEORGE THOMPSON, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 10, 1919. Serial No. 296,180. 8 Claims. (Cl. 179—27.5.)



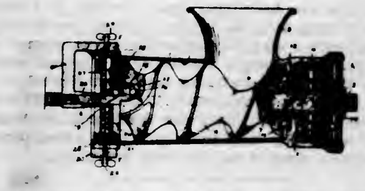
1. In an automatic switch, a plurality of circuit closers, a plurality of operating members in fixed relation to one another, a driving mechanism common to said members, and means to bring said members successively into operative relation with said circuit closers.

1,375,763. METHOD OF FORMING STORAGE-BATTERY SEPARATORS. THEODORE A. WILLARD, Cleveland, Ohio. Filed Feb. 26, 1915. Serial No. 10,720. 6 Claims. (Cl. 204—29.)



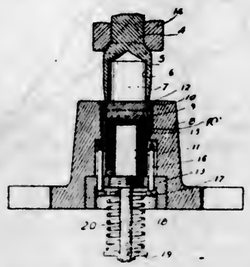
1. The method of forming porous storage battery separators which comprises slicing into sections a block containing porous material, with the sections provided in the slicing operations with uneven surfaces to form spacing projections.

1,375,764. TYPEWRITING-MACHINE. OSCAR WOODWARD, Babylon, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Nov. 13, 1919. Serial No. 337,633. 16 Claims. (Cl. 197—38.)



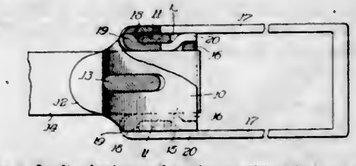
1. In a typewriting machine, the combination of a typebar support, type bars, a pivot wire for said type bars, a pivot wire tightener, and an elastic element coöperating with the tightener to limit the amount of pressure that can be conveyed by the tightener to the pivot wire.

1,375,765. TRANSFORMER-SECONDARY CONNECTION FOR ELECTRIC METAL-WORKING APPARATUS. HERBERT ADDISON WOOFTER, Swampscott, Mass., assignor to Thomson Electric Welding Company, Boston, Mass., a Corporation of Massachusetts. Filed July 30, 1920. Serial No. 400,277. 11 Claims. (Cl. 219—4.)



1. In an electric metal working apparatus, a transformer secondary of laminated strips bundled together at each end, a contact plate engaging the side edges of each of the strips and means electrically connecting said plate with a work-holder.

1,375,766. MEAT-GRINDER. WILLIAM JOHN ANDERSON, Duluth, Minn. Filed July 2, 1920. Serial No. 393,643. 5 Claims. (Cl. 17—20.)

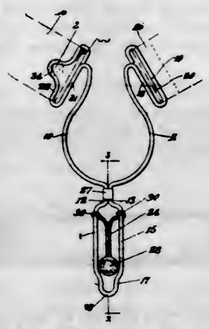


1. The combination with a meat chopping machine of the character described including a cylindrical body portion, a feeding worm therein and perforated grid, of a propeller-like knife adjacent the discharge end of the worm and a grid engaging knife intermediate the propeller-like knife and the grid.

1,375,767. METHOD OF FORMING WRENCH-SOCKETS. PAUL C. BALDUS, Milwaukee, Wis. Filed June 11, 1920. Serial No. 388,257. 3 Claims. (Cl. 76—114.)

1. The method of forming a socket wrench which consists in forming a blank with a tubular end from solid stock and pressing the tubular portion of this blank between two dies of polygonal formation so as to change the circular section at any cross section through the blank into a polygonal section, the walls of which have substantially the same thickness as the circular section of the blank.

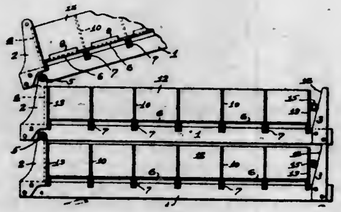
1,375,768. DRAWBAR-YOKE. CARL E. BAUER, Hammond, Ind. Filed Oct. 2, 1920. Serial No. 414,296. 5 Claims. (Cl. 213—42.)



1. In a draft rigging yoke, the combination of a sleeve adapted to surround and be connected to a coupler butt, the sleeve being provided with apertures in opposite side walls; and a yoke the free ends of the arms of which are bent around the apertured sides of the sleeve, the extremities of the bent portions being projected into the apertures in the sleeve and into substantial contact with the straight portion of the arms.

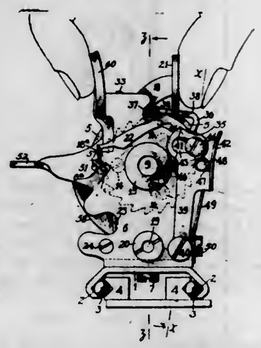
1,375,769. WINDOW-FASTENER. JOHN K. BLEACKACRE, Bloomer, Wis. Filed May 10, 1920, Serial No. 380,354. Renewed Mar. 3, 1921. Serial No. 449,500. 4 Claims. (Cl. 292—230.)

1. A window fastener comprising a socket member having an outer wall provided with a key-hole slot with its enlargement at its upper end, a securing arm having a stem extending through the key-hole slot and an enlarged head carried by the stem and passing through the enlarged end portion of the slot to releasably and pivotally mount the arm.



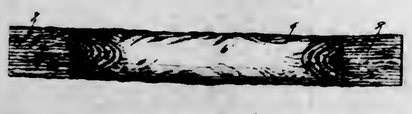
1,375,770. GARTER-CLASP. WILLIAM E. BOWEN, East Orange, N. J. Filed May 26, 1920. Serial No. 384,379. 8 Claims. (Cl. 24—246.)

1. In a resilient garter clasp, in combination, a wire forming an open resilient loop, an extended portion of the wire forming a means for the insertion of fabric, a member



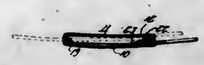
slidable over the extended portion, a button carried by the slidable member capable of insertion within the extended member forming a fabric retaining means therewith, each end of the wire forming a loop for the retention of the two ends of a web, the end loops being in angular position with respect to each other.

1,375,771. MOLD STRUCTURE. HAROLD J. BRADT, Pontiac, Mich. Filed July 6, 1920. Serial No. 394,078. 7 Claims. (Cl. 25—121.)



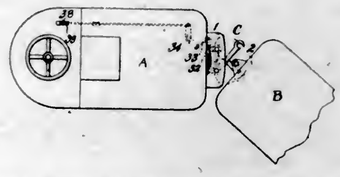
3. A mold structure comprising parallel superposed bars, posts carried by said bars and supporting adjacent superposed bars so that said bars may have ends thereof raised, and molds on said bars.

1,375,772. TYPEWRITING-MACHINE. HERBERT L. BRIDGWATER, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Oct. 8, 1919. Serial No. 329,291. 13 Claims. (Cl. 197—114.)



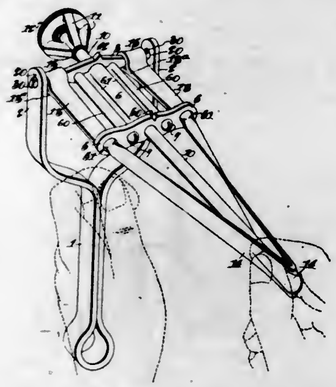
1. In a typewriting machine, the combination of a line space wheel, a line space lever the body portion of which bears against one side of an end plate of the platen frame, a guide finger on said lever which bears against the other side of said end plate, and a line space pawl carried by said lever.

1,375,773. RAILROAD-TIE. JOSEPH D. BRYANT, Appleby, Tex. Filed Sept. 25, 1920. Serial No. 412,708. 1 Claim. (Cl. 238—30.)



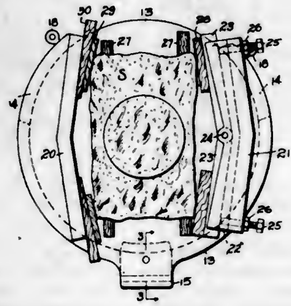
A railroad tie consisting of a log of wood having a natural top surface and a flat bottom, the end portions of the top of the tie being reduced, each inner end wall formed by said reduced end portions being canted toward said reduced portions, whereby rails supported by said reduced portions are properly gaged and prevented from movement toward the center of the tie.

1,375,774. BELT-BUCKLE. HERBERT J. BUCHSBAUM, Chicago, Ill. Filed May 8, 1920. Serial No. 379,822. 10 Claims. (Cl. 24—191.)



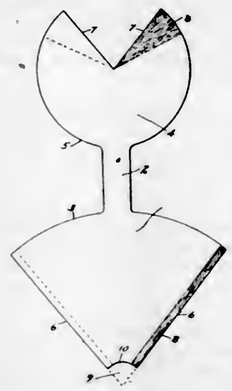
1. A device of the character described comprising a front plate, a clamping element swingingly associated with said front plate and having means for securing a belt extremity in position in said front plate, and a second clamping element mounted upon said front plate and adapted when in clamping position to clamp the free belt extremity between said second clamping element and said first clamping element.

1,375,775. TRUCK-COUPLING. WILLIAM L. BURNER, Columbus, Ohio, assignor to The Kilbourne & Jacobs Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 23, 1919. Serial No. 319,411. 11 Claims. (Cl. 213—67.)



11. The herein described coupler element, in a mechanism for joining vehicles together, having parts adapted to engage with a vertically extending holder secured to a vehicle, and comprising a housing with a lateral opening and two horizontally swinging bars each pivoted to the housing at one side of the center of the vehicle and adapted to swing backward across the center into the housing and both adapted to have their outer ends swing forward to the vertical lines of the aforesaid holder lug.

1,375,776. TOY CATAPULT. HENRY D. BUYS, Emmett, Idaho. Filed Jan. 25, 1921. Serial No. 439,787. 3 Claims. (Cl. 124—2.)

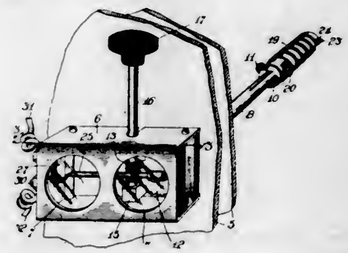


1. A toy of the character described comprising a projectile guiding and supporting element, a handle frame, means for rockably supporting the projectile guiding element on the handle frame, and an elastic sling secured at its ends to the guiding element whereby as a projectile is placed in the guiding element and it and the sling are pulled back, the sling is under tension and means coöperative with the guiding element to which the opposite ends of the sling are connected for holding portions of the said ends of the sling in position to pull back in parallelism with one another.

1,375,777. CHUCK. ELROY A. CHASE, Northfield, Vt. Filed May 26, 1920. Serial No. 384,248. 6 Claims. (Cl. 125—35.)

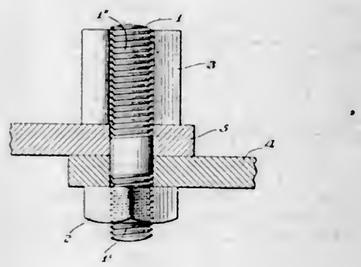
1. A chuck for a machine having a face plate, comprising a body, means to secure the work thereto, a pair of rigid lugs thereon fitting the edge of said face plate, and a clamping device oppositely disposed relatively to said lugs and effective to engage the edge of said face plate to hold said chuck in position.

1,375,778. SANITARY ICE-CREAM-CONE PROTECTOR. EARL C. CLEARWATER, Los Angeles, Calif. Filed Apr. 20, 1920. Serial No. 375,365. 1 Claim. (Cl. 229—1.5.)



A blank comprising sectors of disks and a strip connecting the same at their curved edges, said sectors being curved to bring together their radial edges for forming cones joined by a connecting strip.

1,375,779. FIRE-EXTINGUISHING COMPOSITION. PHILLIP A. CROSBY, Alton, and RALPH R. MATTHEWS, Wood River, Ill., and RALPH B. HIGH, Oakland, Calif., assignors to Roxana Petroleum Company of Oklahoma, St. Louis, Mo., a Corporation of Oklahoma. Filed Aug. 8, 1919. Serial No. 316,069. 5 Claims. (Cl. 23—5.)

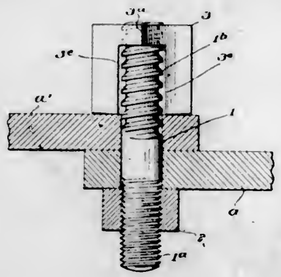


2. A composition for extinguishing fire, composed of sodium bicarbonate, a phosphoprotein and water.

1,375,780. THERMOSENSITIVE CIRCUIT-CONTROLLER. ACHILLES DE KHOTINSKY, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1917. Serial No. 205,790. 4 Claims. (Cl. 200—139.)

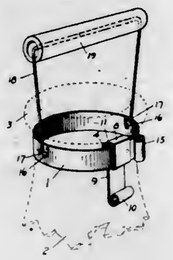
1. In a device of the character described, a thermal circuit closer comprising a fixed contact, a movable contact adapted to open or close the circuit with the variation of the temperature, an arm carrying said movable contact, a bi-metallic helical coil, a rod secured at one end to said arm and extending through said coil and secured at its other end to the adjacent end of the coil, a collar arranged on said rod and secured to the other end of the coil, and means for adjusting said collar relative to said rod to regulate the tension on said coil.

1,375,781. NUT. GEORGE R. DE LONG, Harriman, Pa. Filed June 8, 1920. Serial No. 387,484. 2 Claims. (Cl. 85—32.)



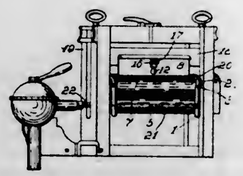
2. The combination with a headless bolt having two threads and nuts adapted for engaging the respective threads, one of said nuts being complete and the other provided with an opening extending laterally therethrough and having sides movable on opposite sides of said bolt to engage and disengage the respective threads, said opening having a depth transverse to said bolt greater than the diameter of said bolt.

1,375,782. NUT. GEORGE R. DE LONG, Harriman, Pa. Filed June 26, 1920. Serial No. 391,922. 6 Claims. (Cl. 85—32.)



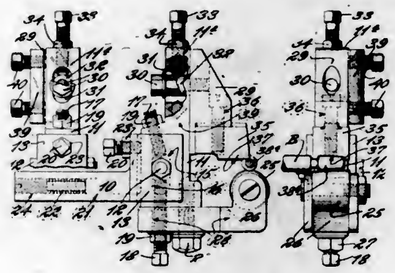
1. The combination with a bolt having a thread, of a nut provided with a thread having one or more complete convolutions and a recess provided with thread sections.

said recess having sides adapted to be passed on opposite sides of said bolt to engage a thread thereof first with



said thread sections and then with a complete convolution aforesaid.

1,375,783. MILK-BOTTLE CARRIER. ALFRED V. DES MOINEAUX, Denver, Colo. Filed May 28, 1920. Serial No. 384,800. 4 Claims. (Cl. 215—100.)

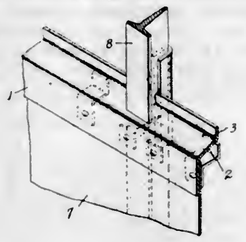


2. A bottle carrier comprising a split collar, the ends thereof being adapted to be moved into overlapped relation, a guide carried by one end of the collar, a latch slidable in the guide, means carried by the latch for engaging the other end of the collar to hold the same in locked engagement with the first named end.

1,375,784. WRINGER ATTACHMENT. LOUIS F. DOELLINGER, Waterloo, Iowa. Filed Dec. 2, 1920. Serial No. 427,694. 3 Claims. (Cl. 68—32.)

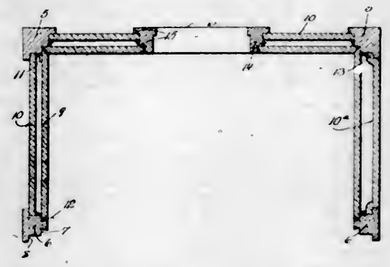
1. A device of the character described, comprising pivotally connected coacting hangers supported removably and vertically movable on a relatively fixed element of a wringer above the upper roll of a pair of rolls, and having deflector-members respectively extended along the top of the upper roll and along opposite sides of the lower roll.

1,375,785. TOOL-HOLDER. IRVIN DROWNS, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Oct. 27, 1919. Serial No. 333,713. 5 Claims. (Cl. 82—35.)



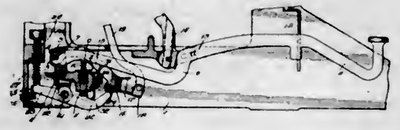
1. A tool-holder for screw machines and the like comprising a supporting arm and a body member adjustably mounted therein, a roller support adjustably mounted on said body member, a tool block mounted on an adjustable pivot in said body member and adapted to hold a tool detachably secured thereto, said tool block having a flange extending around one side of said body member, and adjusting screws arranged on opposite sides of said adjustable pivot, said adjusting screws being threaded into the flange of said tool block and being adapted to bear against the adjacent face of said body member whereby adjustment of one or the other of said screws will cause the tool block to swing on its pivot and change the angle between said tool and said work support.

1,375,786. STEEL CAR CONSTRUCTION. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 13, 1919. Serial No. 282,338. 21 Claims. (Cl. 105—397.)



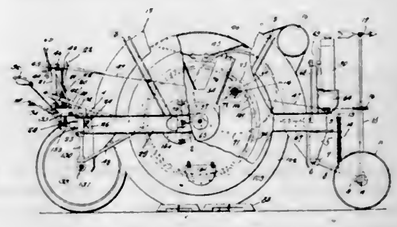
9. In a railway car, the combination, with a roof adapted as an independent unit to be detachably secured to the completed car body and a post having an inwardly inclined end detachably secured to and supporting said roof.

1,375,787. STEEL CAR CONSTRUCTION. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Original application filed Mar. 13, 1919, Serial No. 282,338. Divided and this application filed Apr. 9, 1919. Serial No. 288,817. 14 Claims. (Cl. 105—401.)



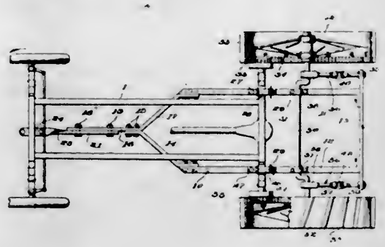
12. A belt rail adapted to be secured to the girder plate and side posts of a car, and having an integral portion intersecting said posts and serving as a sill and weather strip for the lower sash of said car.

1,375,788. CEMENT BUILDING. NICHOLAS FRISCHMANN, St. Francis, Wis. Filed Dec. 23, 1919. Serial No. 346,858. 3 Claims. (Cl. 72—1.)



1. In a concrete building construction, a pair of wall columns having inwardly facing stepped shoulders in their opposite sides, bonding members connecting the columns and having similar shoulders, and concrete slabs having their edge portions secured against corresponding inner faces of said shoulders, whereby said slabs are held by said shoulders in spaced relation against outward movement, and key bodies of cement disposed against the inner edge face of the slabs to hold the same against inward movement.

1,375,789. KEY-LEVER TENSION DEVICE. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed June 3, 1918. Serial No. 237,934. 9 Claims. (Cl. 197—33.)

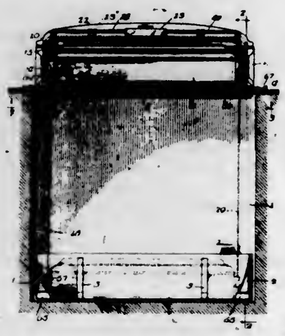


1. In a typewriter, a plurality of pivoted key levers, means tending normally to hold them resiliently in place, a universal bar directly engaged by the key lever after a predetermined movement thereof, resilient means tending to oppose the movement of the universal bar after a predetermined movement thereof and means for regulating the tension of said resilient means to control the key lever tension of said typewriter.

1,375,790. TRACTOR. JOSEPH D. INGRAM, Amarillo, Tex. Filed June 9, 1919. Serial No. 302,670. 6 Claims. (Cl. 180—10.)

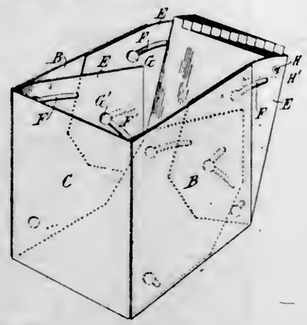
1. In a machine of the class described, the combination of a frame, a pair of sleeved brackets secured one at each side of said frame, a housing mounted for rotation on the sleeves of said bracket and provided with a double internal gear, a hanger bracket mounted on said sleeves and adapted for adjustment around an axis, a motor seated in said bracket, a shaft mounted for rotation in said sleeves and adapted to be driven by said motor, a pinion mounted on said shaft for rotation therewith, gearing between said pinion and internal gear for transmitting rotary motion to said housing through either internal gear, and means for shifting said intermediate gearing from engagement with one internal gear into engagement with the other.

1,375,791. TRACTOR ATTACHMENT FOR AUTOMOBILES. LUCULLUS G. LINCECUM, Chicago, Ill., assignor of one-half to Birdye Binkowitz, Kansas City, Mo. Filed Feb. 5, 1919. Serial No. 275,148. 3 Claims. (Cl. 180—16.)



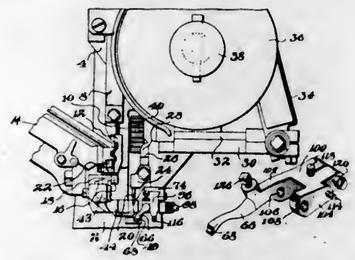
1. In a tractor attachment for automobiles, a frame adapted to lie beneath the chassis of an automobile and having bearings in which to receive the rear axle of the automobile, ground wheels at the rear of the frame, means on the rear axle coöperating with the wheels to drive the same, a shaft journaled in the rear portion of the frame and having crank portions to receive the wheels, said crank portions permitting the wheels to be swung upwardly and forwardly from the position they occupy when the gear elements are enmeshed, said shaft being positioned forwardly of the rear end of the frame, and adjusting means positioned directly between the crank portions and the rear end of the frame.

1,375,792. ROAD-PLATE FOR PROTECTING ROADS. JOHN LOURIM, Bay City, Mich. Filed Sept. 11, 1920. Serial No. 409,735. 13 Claims. (Cl. 238—4.)



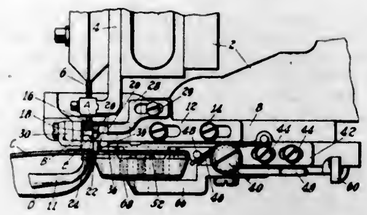
1. A roadway comprising a concrete bed and metallic strips spaced apart substantially the standard wagon width, mounted in said concrete.

1,375,793. FUNERAL AND BURIAL APPARATUS. ROY F. MCCAMPBELL, GEORGE H. SCOTT, and GEORGE Q. SMITH, Chicago, Ill. Filed Sept. 11, 1916. Serial No. 119,416. 12 Claims. (Cl. 27—32.)



1. In an apparatus of the character described, the combination of a shell open at the bottom and having a hollow cover, a casket supported within said shell, flexible lowering means connected to the ends of the casket, and means supported within said cover for controlling the lowering means.

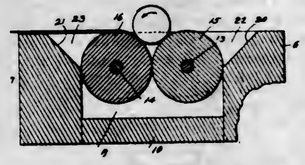
1,375,794. EXPANSIBLE LEDGER-FILE. BARTHOLOMEW E. MCSHEEHY, Huntingdon, Pa., assignor to J. C. Blair Company, Huntingdon, Pa., a Corporation of Pennsylvania. Filed Nov. 23, 1918. Serial No. 263,890. 2 Claims. (Cl. 129—43.)



2. A file comprising a bottom portion, upright portions hinged at opposite sides of said bottom portion, so as to swing outwardly from a vertical to an inclined position, means to limit said movement, and means to lock said uprights in their vertical positions with the top of the file open to expose its contents.

1,375,795. CHANNEL-OPENING DEVICE FOR FASTENING-INSERTING MACHINES. FRED L. MACKENZIE, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 13, 1917. Serial No. 196,358. 25 Claims. (Cl. 1—18.)

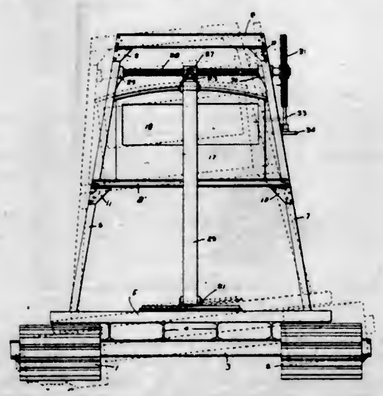
5. In a machine of the class described, means for operating on the bottom of a channel formed in the work, work-positioning means engaging the edge of the work, a movable channel opening finger having its operative end normally spaced from the work engaging surface a distance greater than the normal distance between the edge of the work and the inner edge of the channel formed therein so that the presentation of the work to the work-positioning means with the finger in the channel of the work effects movement of said finger, and means for urging said finger yieldingly in a direction opposite to that in which it is moved by the work to permit the finger to be moved in one direction to maintain contact of the work with the work positioning means when a portion of the work, at which the distance between the edge of the work and the inner edge of the channel is less than the normal distance, is being operated upon by said operating means, and to cause the finger to be moved in an opposite direction when a portion of the work, at which the distance between the edge of the work and the inner edge of the channel is greater than the normal distance, is in operative relation to said operating means.



1,375,796. WORK-GUIDE. FRED L. MACKENZIE, Beverly, and GEORGE GODDU, Winchester, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 3, 1918. Serial No. 243,139. 24 Claims. (Cl. 12—67.)

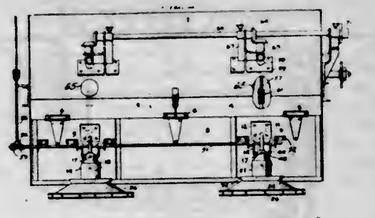
1. In a machine of the class described, means for operating on a welt and a filling strip having a bead projecting from its side, and means for guiding the welt and filling strip and presenting them to the operating means in superposed relation constructed to control by said bead the relation of the filling strip to the welt and operating means.

7. In a machine of the class described, means for attaching a plurality of strips of shoe stock of varying widths to a shoe, and means for guiding said strips in contacting relation and presenting them to said attaching means in superposed relation comprising mechanism having surfaces to guide one of said strips and a member having a surface arranged to support said strip in operative relation to said guiding surfaces, said member being arranged also to guide another of said strips by engagement with its edge.



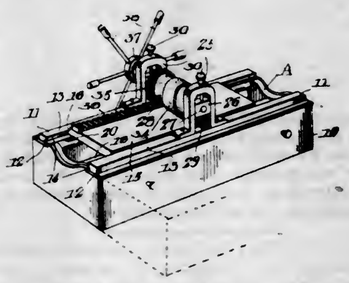
1,375,797. WRAPPING DEVICE. KAN MIYASAKI, Los Angeles, Calif. Filed Nov. 18, 1919. Serial No. 338,958. 2 Claims. (Cl. 93—2.)

1. A device of the class described, comprising a frame, a pair of rollers mounted in parallel relation and adjacent each other in said frame, said frame being provided on two of its upper and oppositely disposed edges with inclined surfaces adapted to form with the peripheral surfaces of said roller a crotch for the reception of a plurality of coins, and index marks arranged on said frame adjacent said inclined surfaces, whereby the number of coins assembled in said crotch may be determined.



2. A device of the class described, comprising a frame, a roller journaled in said frame, and a side member arranged adjacent and parallel with said roller, provided with an inclined edge adapted to form a crotch therebetween for the reception of coins.

1,375,798. EXCAVATING-MACHINE. SAWYER Y. MONCKTON, San Francisco, Calif. Filed July 7, 1919. Serial No. 309,447. 5 Claims. (Cl. 212—65.)

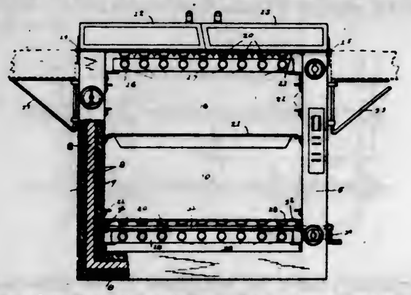


1. In an excavating machine, a base structure provided with movable members on each side on which the base travels, a turntable substantially central between the movable members and a boom hinged on said turntable, a cable attached to the upper end of said boom, a block through which said cable is reeved, a pair of support struts mounted on the base and respectively over each movable member, a cross piece between the upper ends of said struts on which said block is adapted to travel between the struts and means for shifting the block on the cross piece to vary the center of support of the boom with respect to the movable members.

1,375,799. SAND OR GRAIN DISTRIBUTER. PETER J. OWEN, San Francisco, Calif. Filed Mar. 31, 1919. Serial No. 286,311. 1 Claim. (Cl. 275—8.)

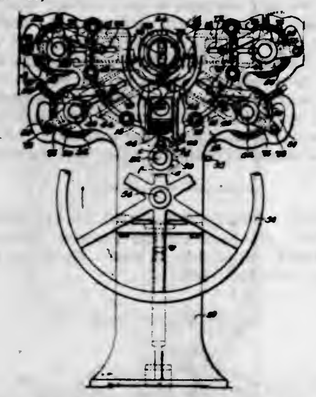
Apparatus adapted for attachment to the refuse container of a street sweeping machine so as to convert the latter into a sand or grain distributer, which apparatus embodies in its construction a door adapted to be attached to the refuse container of a street sweeping machine in substitution for the door such as is ordinarily used for closing the discharge opening of the container, an upright rotary shaft supported by and extending above and below said door, another rotary shaft adapted to be attached to the street sweeping machine so as to extend into the said container and lie in line with and above the first named shaft, means for rotating the last-named shaft adapted for operative association with the street sweeping machine, a coupling carried by the one of the shafts and in which the other shaft is removably received, a distributer supported and operated by the first named shaft and disposed below the door, and a spout extending through the door and arranged to discharge into the distributer.

1,375,800. PORTABLE CARD PLATE-PRINTING MACHINE. HERBERT GEORGE POPHAM, Toronto, Ontario, Canada. Filed Sept. 7, 1920. Serial No. 408,596. 4 Claims. (Cl. 101—158.)



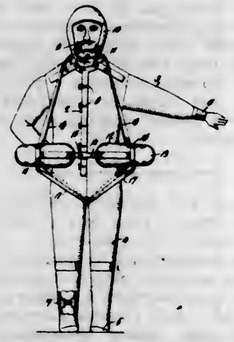
1. A portable copper card plate printing machine comprising a carriage, a roller rotatably mounted above the carriage and adjustable thereto, said roller having a flattened face, handles for rotating the roller in one direction, one of the handles being loaded and arranged at right angles to the flattened face of the roller, means whereby the rotation of the roller transmits a uniform movement to the carriage, and means for automatically returning the carriage to a normal position when the last said means is inoperative.

1,375,801. ELECTRIC COOKING-STOVE. ALLEN R. ROSS, Seattle, Wash. Filed July 1, 1919. Serial No. 307,976. 5 Claims. (Cl. 219—35.)



1. An electric cooking stove for domestic purposes, embodying an oven provided with heat-insulated side and bottom walls and provided with a cooking vessel supporting top formed of a sheet of metal electrically insulated, electric heating coils located immediately below said sheet of metal, electric heating coils located in the bottom

portion of said oven, and removable heat-insulating members adapted to rest upon said top sheet of metal and

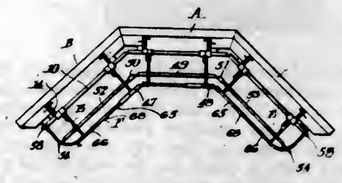


disposed to limit the radiation of heat from said sheet of metal.

1,375,802. FORMING APPARATUS. THOMAS H. SHELY, Malden, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 17, 1918. Serial No. 258,597. 35 Claims. (Cl. 69—8.)

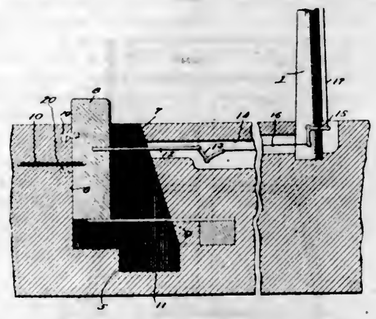
2. In an apparatus for forming leggings and the like, an inner mold about the circumference of which the material to be molded is placed, and an outer mold for contact with the material about more than half the circumference of the inner mold, and including sections movable independently in the molding operation.

1,375,803. LIFE-SAVING SUIT. KYRIAKOS SOULIOTIS, Washington, D. C., assignor of one-half to Soterios Nicholson, Washington, D. C. Filed Aug. 23, 1920. Serial No. 405,266. 3 Claims. (Cl. 9—20.)



1. A preserver of the class described comprising a pair of buoyant sections having enlargements thereon at regular intervals, said sections being in flexible engagement with each other, and means for attaching said sections to the body of a wearer in the manner and for the purpose specified.

1,375,804. ALLOY. COLUMBUS D. STOVALL, Lexington, Ky. Original application filed June 7, 1920, Serial No. 387,218. Divided and this application filed July 14, 1920. Serial No. 396,081. 1 Claim. (Cl. 75—1.)

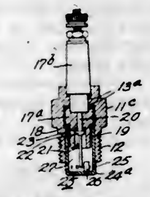


An alloy comprising in substantially the proportions given gold 72 grains, nickel 13½ grains, and copper 16½ grains.

1,375,805. SHADE AND CURTAIN HOLDER. HENRY UMPHREY, Carleton Place, Ontario, Canada, assignor of one-third to Elmer Donald Benjamin Robertson and one-third to Harry David Umphrey, Carleton Place, Ontario, Canada. Filed Oct. 14, 1920. Serial No. 416,912. 5 Claims. (Cl. 156—24.)

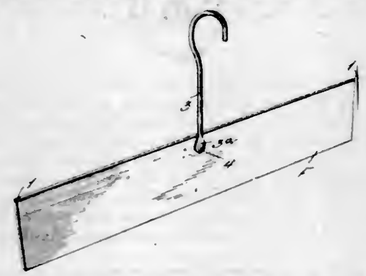
2. A curtain rod having an inwardly turned upper and lower flange, a supporting member having an upturned projection adapted to extend beneath the upper flange of the rod, and a lower turned projection adapted to bear against and support the outer side of the lower flange on the rod.

1,375,806. SIGNALING DEVICE. IRA BAILEY WALKER, Etna Mills, Calif. Filed Mar. 31, 1920, Serial No. 370,275. Renewed Mar. 12, 1921. Serial No. 451,842. 7 Claims. (Cl. 116—67.)



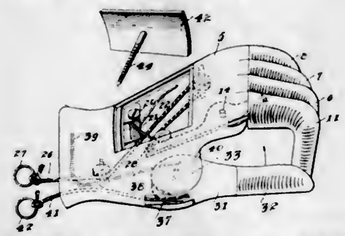
1. In combination with a semaphore arm and means adapted to be controlled by a moving car for lifting said arm to danger position, means for holding said arm in danger position independent of the vehicle controlled operating means, and time controlled means for releasing said holding means after a predetermined length of time, and an audible signal operated by the time controlled means.

1,375,807. SPARK-PLUG. ALBERT E. WATTS, Dorval, Quebec, Canada. Filed Dec. 6, 1919. Serial No. 343,029. 2 Claims. (Cl. 123—169.)



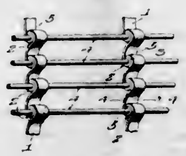
1. A spark plug comprising a hollow body having the bore thereof restricted adjacent to the upper end of the body to provide an inwardly extending flange, an outer insulator having its lower end thereof engaged against the upper face of said flange and reduced to extend past

the flange and to provide a shoulder encircling the reduced portion and supported on the flange, a second insulator contained within said body having one end enlarged and abutting the opposite face of the flange and recessed to snugly receive the reduced portion of the outer insulator, said enlarged end forming a shoulder facing the lower end of the bore, an electrode passing through said insulators and provided with means for clamping the



same against the opposite faces of the flange, a removable apertured cap closing the lower end of the body and extending into the bore of the body to bear against the shoulder of the inner insulator to hold the same against escape through the bottom of the body, said cap forming in conjunction with the lower end of said inner insulator a primary explosion chamber and sparking points carried by the insulator and cap approaching one another within said chamber.

1,375,808. SKIRT-HANGER. DESFORD WITBECK, St. Louis, Mo., assignor to P. C. Murphy Trunk Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 26, 1920. Serial No. 354,104. 3 Claims. (Cl. 211—13.)

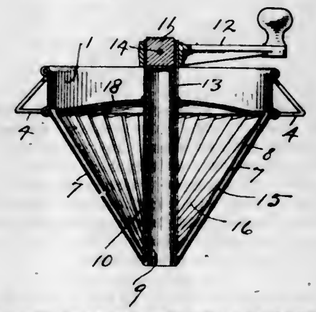


3. A skirt hanger, comprising a waist band engaging member formed from a flat strip of thin material of substantially oblong shape whose upper edge is longer than its lower edge, and a suspending means connected to said member.

1,375,809. ARTIFICIAL HAND. ROBERT FRANCIS ARMSTRONG, La Cygne, Kans. Filed Apr. 13, 1920. Serial No. 373,518. 8 Claims. (Cl. 3—12.)

1. An artificial hand comprising a hollow hand member, a middle finger member rigid with said hand member, an index finger pivotally mounted on said hand member to swing toward and away from said middle finger member on an axis extending substantially perpendicularly through said hand member from the palm to the back thereof, said index finger member having an extension projecting into the interior of said hand, a bracket arranged in the interior of said hand, a coil spring mounted upon said bracket having one of its ends extended and bearing against the interior wall of said hand member and its other end extended to form a lateral arm having its outer end constituting a bearing, a roller journaled upon said bearing and engaging said index finger member extension whereby the movement of said index finger member away from said middle finger member is resisted by said coil spring, an operating cord connected to the extreme outer end of said extension beyond the outermost point of contact of said roller whereby said operating cord has a greater leverage with respect to said index finger member than said spring, and guide pulleys for said cord member including a pulley journaled forwardly of said point of connection, all as and for the purposes set forth.

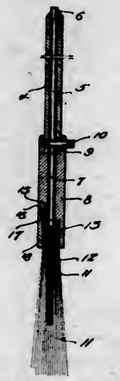
1,375,810. WIRE FABRIC. WILLIAM E. BAKER, Waco, Tex., assignor to Wonder Trap Co., Inc., Waco, Tex. Filed May 24, 1920. Serial No. 383,695. 3 Claims. (Cl. 245—2.)



1. In a wire fabric, transversely corrugated metal strips, and wire rods disposed in the concavities on one side of the strips, and the corrugations being flattened to completely encircle and tightly grip the rods, said strips and rods being formed with bowed parts extending transversely of the strips to hold the rods against movement transversely of the strips.

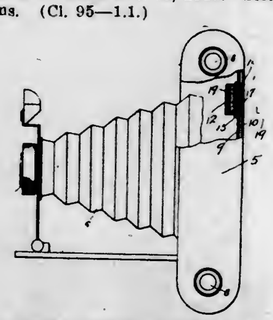
1,375,811. FUEL AND METHOD OF PRODUCING SAME. LINDON WALLACE BATES, Mount Lebanon, N. Y. Original application filed Aug. 5, 1919, Serial No. 315,497. Divided and this application filed Jan. 22, 1920. Serial No. 353,324. 3 Claims. (Cl. 44—8.)

1. That method of stabilizing the asphaltum and free carbon particles in liquid hydrocarbon containing the same, which consists in blending therewith coal distillate or equivalent peptizing substance and blending the components and simultaneously peptizing the particles with heat treatment at a temperature range between normal temperature and approximately 95° C.



1,375,812. COLANDER. ALBERT G. BERG, Indianapolis, Ind. Filed Feb. 16, 1921. Serial No. 445,495. 8 Claims. (Cl. 146—9.)

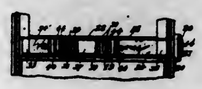
4. In a culinary apparatus of the character specified, an inverted truncated conical member having inwardly projecting cutters and a central column, a movable downwardly tapering member having corrugations, said second member having a central column assembled on the first column, said second member adapted to approach the first member as the work progresses to force out the prod-



uct, and means at the top of the column of the first member to limit the approach of the two members to avoid clogging after most of the product has passed.

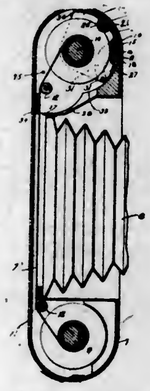
1,375,813. BROOM. ADOLF BERGER, Philadelphia, Pa. Filed May 10, 1920. Serial No. 380,187. 1 Claim. (Cl. 15—47.)

A broom of the character described including a head having a cavity and a passage providing a reservoir communicating with said cavity; and a flexible sweeping portion made up of straws in brush form having a flexible core member embedded therein, the upper part of said flexible portion including adhesive material for joining said straws together and to the outer portion of said core and being fitted within said cavity, said core being in communication with said reservoir whereby liquid from said reservoir will be absorbed by said core member; substantially as described.



1,375,814. METHOD OF MAKING MARKINGS ON SENSITIZED MATERIAL. JOHN P. BETHKE, Milwaukee, Wis., assignor of one-half to Louis Schlesinger, Milwaukee, Wis. Filed Dec. 11, 1916. Serial No. 136,151. 7 Claims. (Cl. 95—1.1.)

1. The method of placing designating markings on a sensitized element while in a camera, by means of a phosphorescent medium within the camera, and a translucent element having a writing surface bearing light obstructing characters thereon, which consists in interposing the writing element with the characters thereon between the sensitized element and the phosphorescent medium and exposing said sensitized element to the light rays emanating from said phosphorescent medium.

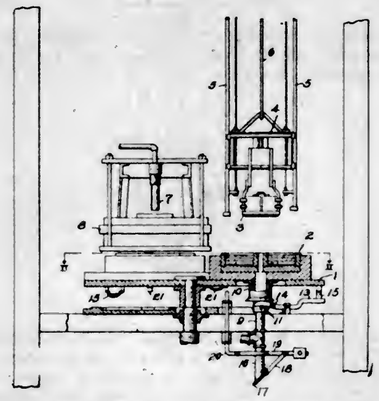


1,375,815. AUTOGRAPHIC CAMERA. JOHN P. BETHKE, Milwaukee, Wis., assignor of one-half to Louis Schlesinger, Milwaukee, Wis. Filed Jan. 9, 1918. Serial No. 211,079. 20 Claims. (Cl. 95—1.1.)

1. In an autographic camera, the combination, with a camera having an opening in one of its walls, of a data receiving member movable in said opening into and out of data imparting position adjacent the sensitized element within the camera, means for furnishing light from a luminous material, for printing the data on said member upon said sensitized element, and shutter mechanism pro-

vided with a multiplicity of exposure openings for simultaneously exposing all portions of the sensitized material adjacent said data receiving member to the light from said light furnishing means.

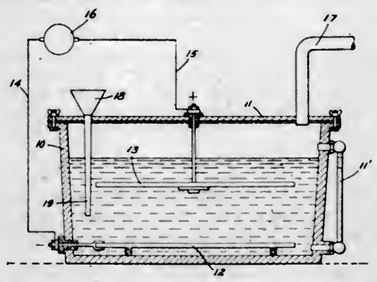
1,375,816. AUTOGRAPHIC CAMERA. JOHN P. BETHKE, Milwaukee, Wis. Filed July 20, 1920. Serial No. 399,849. 20 Claims. (Cl. 95—1.1.)



1. The combination, with a camera having an opening in one of its walls, of a data receiving member positionable at the opening for receiving data and movable to data imparting position adjacent the sensitized element in the camera, a septum movably mounted adjacent said opening for excluding light from the interior of the camera at all times, means for causing the data on said member to be printed upon said sensitized element, and mechanism for moving said member into and out of data imparting position.

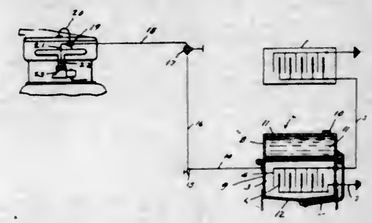
1,375,817. WELL-DRILLING TOOL. WILLIAM G. BLODGETT, Los Angeles, Calif. Filed July 29, 1920. Serial No. 399,772. 7 Claims. (Cl. 255—77.)

1. A drilling tool comprising a bit rod having a drilling bit, an expansible reamer received over said bit rod, and means for expanding said reamer by longitudinal movement of the same relative to said bit rod.



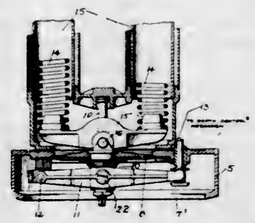
1,375,818. GLASS-DRAWING APPARATUS. JOHN J. BLOXSOM and ELMER E. MYERS, Brookville, Pa. Filed Sept. 2, 1919. Serial No. 321,103. 4 Claims. (Cl. 49—17.1.)

1. In apparatus for drawing glass cylinders, the combination of a turn table provided with a molten glass container, an air conduit having an open end below said table and extending through said container, an air supply pipe having an open end below the table, a sleeve at the end of said pipe longitudinally movable thereof to register with the end of said conduit, a pivoted lever engaging said sleeve, and a spring secured to said table and adapted upon the rotation thereof to engage said lever to move said sleeve into engagement with the open end of said conduit.



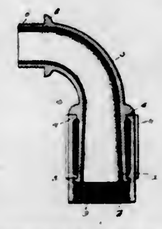
3. In apparatus for drawing glass cylinders, the combination of a turn table provided with a molten glass container, an air conduit extending through said table and container, a vertically disposed air supply pipe below said table provided with a bottom discharge opening, the top of said pipe being adapted to register with the bottom of said conduit when the glass container is in drawing position, a closure for said discharge opening, and means coördinated with the movement of said table for opening said closure to permit the discharge of broken glass from the air supply pipe.

1,375,819. PROCESS AND APPARATUS FOR THE ELECTROLYTIC GENERATION OF ARSIN, PHOSPHIN AND STIBIN. HENRY BLUMENBERG, Jr., Oro Grande, Calif. Filed June 11, 1919. Serial No. 303,463. 4 Claims. (Cl. 204—9.)



8. A process of making a mixture of oxygen and a gas consisting of hydrogen and an element of the phosphorous group, with the exception of nitrogen and boron, comprising subjecting a compound of the phosphorous group, with the exception of nitrogen and boron, to electrolyzation, in conjunction with a re-agent capable of forming nascent hydrogen at the cathode and oxygen at the anode, and collecting the gases formed.

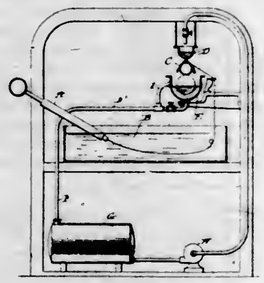
1,375,820. PRIMER FOR INTERNAL-COMBUSTION ENGINES. HENRY BLUMENBERG, Jr., Barstow, Calif., assignor to John H. Blumenberg, Huntington Park, Calif. Filed Aug. 4, 1919. Serial No. 315,277. 3 Claims. (Cl. 123—180.)



1. The combination with the combustion chamber of an internal combustion engine, of a source of electric energy, a gas generator having means for storing a quantity of electrolyte for use in generating a combustible gas, said generator having a chamber adapted to admit the electrolyte to the gas chamber, thereby turning on an electric current, and adapted to expel the electrolyte from the gas chamber by the pressure of the gas, thereby turning off the electric current, a passage leading from the gas generator to the combustion chamber, and single means under the control of the operator for closing said passage, whereby the supply to the combustion chamber is cut off and generation of the gas is discontinued.

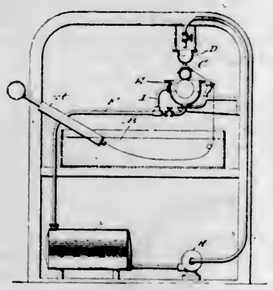
1,375,821. TORPEDO. HARRY LUTHER BOESCH, Washington, D. C., assignor to Government of the United States, represented by the Secretary of the Navy. Filed Dec. 15, 1919. Serial No. 345,165. 4 Claims. (Cl. 114—25.)

1. In a torpedo, in combination, depth control mechanism, a diaphragm exposed to hydrostatic pressure, and a shock absorber interposed between the diaphragm and the depth control mechanism adapted to take up the shock when launching the torpedo.



1,375,822. COUPLING. CHARLES AUGUST BORGESON, San Francisco, Calif. Filed Jan. 20, 1920. Serial No. 352,684. 1 Claim. (Cl. 285—161.)

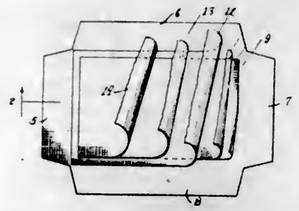
A coupling comprising sections having interengaging means for rotatably and permanently connecting them, one



of the sections being adapted to fit within the other and having means for limiting its inward movement, said sections having interengaging means normally out of engaging position and adapted to be brought into engaging position by the expansion of the inner section, said interengaging means comprising an external rib on the first named section at the inner end thereof, and an internal rib on the last named section, said rib being spaced from the limiting means of the first named section to be positioned on the opposite side of the internal rib from the limiting means when the limiting means is in engagement with the last named section so that when the first named section is expanded the ribs will interengage to prevent disengagement of the sections to rotatably connect them.

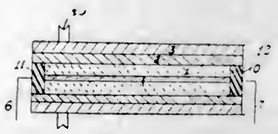
1,375,823. PROCESS FOR THE PRODUCTION AND SIMULTANEOUS CONVERSION OF ARTICLES OBTAINED FROM SOLUTIONS INTO THEIR ULTIMATE FORMS. BENNO BORZYKOWSKI, Cleveland, Ohio. Filed May 29, 1917. Serial No. 171,794. 5 Claims. (Cl. 18—54.)

4. The process of producing articles from viscose solutions, which consists in forming and setting the same in a non-acid salt solution, and as an immediately subsequent operation converting the same into the final cellulose product.



1,375,824. PROCESS OF PRODUCTION AND SIMULTANEOUS CONVERSION OF ARTICLES OBTAINED FROM SOLUTIONS INTO THE ULTIMATE FORMS. BENNO BORZYKOWSKI, Paris, France. Original application filed May 29, 1917, Serial No. 171,794. Divided and this application filed June 19, 1920. Serial No. 390,240. 4 Claims. (Cl. 18—54.)

1. That process of producing articles from coagulable solutions, which consists in passing the same directly into an alkaline bath and immediately thereafter, as a continuing operation, subjecting the same to an ultimate chemical conversion.



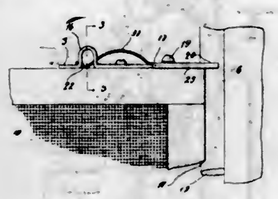
4. That process of treating cellulose masses, which consists in spinning the same into an alkaline bath, withdrawing the thread from the bath and winding the same under tension, and simultaneously converting the same into cellulose hydrate by subjecting it to the action of sulfuric acid.

1,375,825. PATCH FOR PNEUMATIC TIRES. JOHN R. BUECHLER, Akron, Ohio. Filed Oct. 29, 1919. Serial No. 334,218. 5 Claims. (Cl. 152—26.)

3. A patch of the class described, comprising a flat rectangular body composed of a plurality of superposed layers of textile fabric adhesively united by means of unvulcanized rubber and comprising an inner layer, an outer layer and a plurality of intermediate layers, the inner layer being substantially larger than the outer layer and the outer layer substantially larger than the intermediate layers, the said outer layer being provided with a plastic panel of unvulcanized rubber gum adapted to adhesively attach the patch to the interior surface of a pneumatic tire casing, and means to additionally hold said body in position in a tire, said means comprising non-adhesive flaps which project outwardly from each of the four sides of said body, so that the flaps on opposing sides may be impinged between the base of the tire and the tire rim.

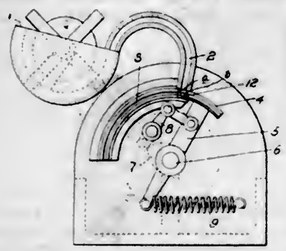
1,375,826. CASTING METAL TUBING. LEON CAMMEN, New York, N. Y. Filed Jan. 24, 1921. Serial No. 439,574. 5 Claims. (Cl. 22—65.)

1. A process of manufacture of metal tubing by centrifugal casting, wherein is used a composite mold, consisting of not less than three parts, such that part one which comes in contact with the metal of the tube, is electroconductive; part two, essentially surrounding part one, is electro-insulative, and part three is of metal; and wherein further the lining, which is part one of the mold, is heated, previous to the pouring of the metal, by an electric current to a temperature close to the melting point of the metal.



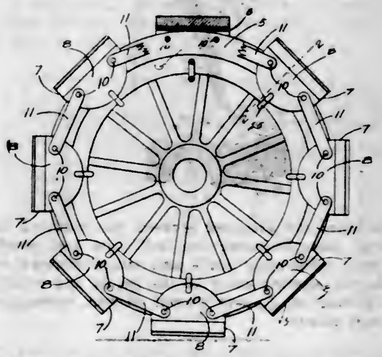
1,375,827. HATCHWAY-DOOR-OPERATING MECHANISM. CLARENCE LEE COLBY, Omaha, Nebr. Filed Oct. 2, 1919. Serial No. 328,037. 4 Claims. (Cl. 187—52.)

1. In combination with an elevator cage and its hatchway, having hatchway openings and doors normally closing them, of mechanism for imparting movement to a selected door to open a particular hatchway opening comprising a vertically movable head, connections between the head and the door so that the movement of the head in one direction will cause an opening movement to be imparted to the door and a movement of the head in the other direction will cause a closing movement to be imparted to said door, a motor driven screw feed for imparting movement to the head in either direction, and manually controlled means for causing rotation of the



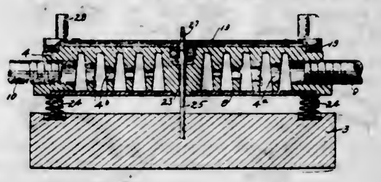
motor in one direction and automatically operated means in response to movement of the elevator for causing rotation of the motor in the opposite direction.

1,375,828. SAFETY DEVICE FOR SCREENS. EDWARD J. COLEMAN, Scranton, Pa. Filed Sept. 9, 1920. Serial No. 409,173. 5 Claims. (Cl. 156—14.)



5. The combination with a window screen provided in the side thereof with a shallow groove adapted for the slidable reception of a guiding strip, of a member mounted upon the screen and adapted to be moved into and out of engaged position, said member being provided with a notch of greater depth than the groove of the screen which slidably receives the guiding strip when the member is in engaged position and means resiliently resisting movement of said member when in the engaged position.

1,375,829. NUT AND BOLT ASSEMBLING MACHINE. JAMES CRAIG and CHARLES C. THOMSON, Butler, Pa. Filed May 19, 1920. Serial No. 382,650. 9 Claims. (Cl. 10—155.)



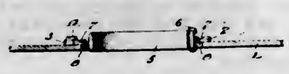
1. In a nut and bolt assembling machine, a roll way for bolts formed by and between opposite bolt-engaging members extending in parallelism, means for moving one of said members relatively to the other in the line of such parallelism, whereby a bolt engaged by the said opposite members is rolled in said roll way, and means for causing a nut restrained against rotation to advance in unison with a bolt so rolled, substantially as described.

1,375,830. AUTO-WHEEL. GEORGE H. CRASS, Ithaca, N. Y., assignor of one-half to John Sabin, Ithaca, N. Y. Filed Sept. 10, 1919. Serial No. 322,791. 2 Claims. (Cl. 301—43.)

1. In a device of the class described, a rim; tread members mounted on the rim and comprising side ears; securing elements connecting the ears of each tread member with the felly; and links connecting the securing elements of each tread member with the securing elements of adjoining tread members.

1,375,831. PRESS FOR MOLDABLE COMPOUNDS. GEORGE HOWLETT DAVIS and CHARLES HOWARD MITCHELL, West Orange, N. J.; said Mitchell assignor to said Davis. Filed Dec. 17, 1919. Serial No. 345,456. 24 Claims. (Cl. 18—48.3.)

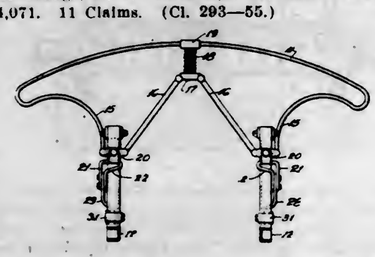
1. In a device of the character described, a press, two die members mounted upon said press and adapted to press a compound between them, at least one of said die members being constructed to permit a heating or cooling fluid to be circulated therethrough for heating or cooling the same uniformly, one of said dies having an aperture therethrough, a pin in said aperture and extending through the compound when the dies are pressed together, and means for causing said pin to be withdrawn from the compound and into the aperture in said die when the dies are separated.



1,375,832. VEHICLE-WHEEL AND TIRE. EARL AMOS DE BAUN, Minneapolis, Minn. Filed Dec. 4, 1919. Serial No. 342,431. 3 Claims. (Cl. 152—30.)

2. In a vehicle wheel, a hub, a rim, a plurality of resilient connecting spokes, each of the spokes including a plurality of spring leaves and a reinforcing plate, the inner end of the reinforcing plate being provided with inwardly extending wings arranged to engage the hub, means rig-

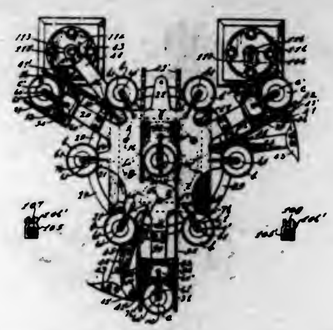
idly securing the inner end of the reinforcing plate to the hub, one of said leaves being formed relatively long and having its inner end positioned between the wings in spaced relation to the hub, and having its outer end pivotally secured to the rim, another one of said leaves having its inner end extended between the wings of the reinforcing plate engaging the hub, said last mentioned leaf, hub, reinforcing plate and wings forming an oil pocket, the meeting faces of the leaves and reinforcing plate having oil grooves formed therein communicating with said pocket.



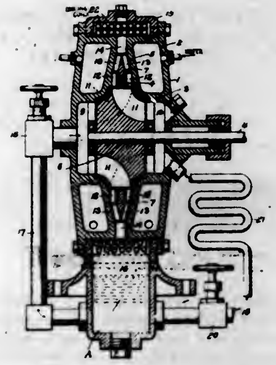
1,375,833. LUBRICATING MEANS FOR SPINNING-RINGS. OSCAR A. DOVER, Gastonia, N. C. Filed June 28, 1920. Serial No. 392,399. 2 Claims. (Cl. 118—59.)

1. The combination with an imperforate spinning ring, of a supporting member therefor, said member having in its upper face an annular oil groove surrounding the ring, and provided with ducts extending through itself so as to conduct oil to the lower edge of said ring.

1,375,834. AUTOMOBILE-BRACKET. HARRY W. DYER, East Orange, N. J. Filed Apr. 15, 1920. Serial No. 374,071. 11 Claims. (Cl. 293—55.)



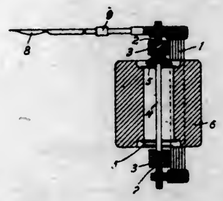
5. A bracket attachment for automobiles consisting of a flat shaped member with attaching means positioned with relation to the frame of said automobile and a clamping piece, said member secured to said clamping piece, said clamping piece secured to the frame of said automobile and offset to position said member in the horizontal plane of the frame of said automobile.



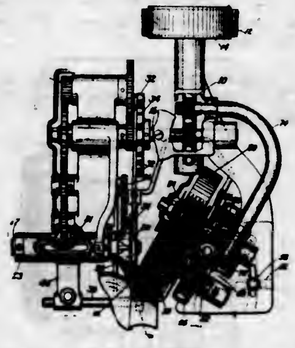
1,375,835. AUTOMATIC BOWLING MECHANISM. OREN J. FAIRCHILD, Pasadena, Calif. Filed Dec. 14, 1917. Serial No. 209,175. 59 Claims. (Cl. 46—54.)

45. A bowling mechanism including a frame at the playing position, pivotally movable pin seats supported thereon, and means for elevating and depositing the pins on said seats.

58. A bowling mechanism including a pin collecting device comprising spaced pairs of parallel spiral rolls with openings therebetween for receiving and facing the pins after a play.

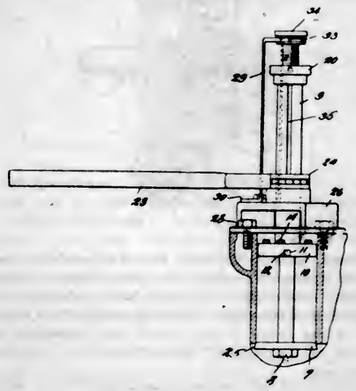


1,375,836. REFRIGERATING APPARATUS. ERNEST F. FISHER, Essington, Pa. Filed Jan. 17, 1919. Serial No. 271,599. 3 Claims. (Cl. 62—115.)



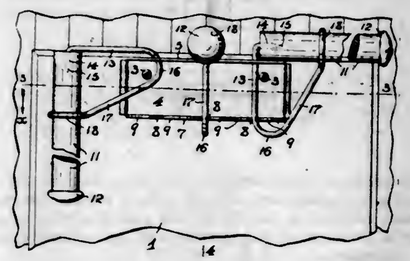
1. A gas compressor including a rotor having a centrifugal passageway, means for introducing at the inner end of said passageway the gas to be compressed, communication from the delivery end to the intake end of said passageway, and a body of fluid homogeneous with the gas to be compressed circulating in liquid form through said passageway and through the line of said communication, substantially as described.

1,375,837. ELECTRICAL MEASURING INSTRUMENT. CHARLES EDWIN FOSTER, Letchworth, England. Filed Sept. 11, 1916. Serial No. 119,494. 2 Claims. (Cl. 171—95.)



1. An electrical measuring instrument comprising a magnet, a core member revolubly mounted between the pole pieces of said magnet, a spindle for supporting said core member, jeweled pivot bearings engaging the extremities of said spindle, a positive connection between said jeweled pivot bearings adapted to hold said bearings in fixed relation to each other, springs for supporting said spindle which springs are so arranged as to constitute the sole lateral support of said spindle and core member, and a pointer supported by said spindle and adapted to turn therewith.

1,375,838. BLACKING-MACHINE. FREDERICK M. FULLER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 12, 1917. Serial No. 206,776. 30 Claims. (Cl. 12—31.)



14. In a blacking machine, the combination of a rotatable blacking applying brush, a rotatable comb having circumferentially separated teeth arranged to engage and straighten out the bristles of the applying brush, and intermeshing driving means for said devices constructed and arranged to cause the teeth of the comb to engage the brush at progressively advancing points, which points, as to successive circumferential actions about the brush, vary in their angular relation.

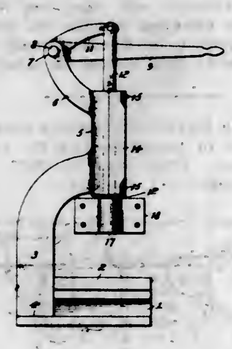
1,375,839. REBORING-MACHINE. WILBURN ADOLFUS GALLEMORE, South Clinchfield, Va. Filed Feb. 5, 1920. Serial No. 356,449. 3 Claims. (Cl. 77—2.)

1. In a boring machine for reboring cylinders, a supporting rod having a disk on one end thereof, said disk having inclined surfaces to cause the same to seat within one end of the cylinder, a tubular member supported on the supporting rod, cutting blades carried by the tubular member, a relatively large head positioned on the tubular member and adapted to be secured to the upper surfaces of a cylinder, means for rotating the tubular member and cutting blades, a bracket member having connection with the relatively large head and having a right angled upper extremity, a threaded head positioned in the right angled upper extremity, said supporting rod having a threaded portion extending through the threaded head, and said rod adapted to be threaded through the threaded head where the same drops through the cylinder.

1,375,840. RACK DEVICE. FREDERICK GOERTZ, Newark, N. J., assignor to August Goertz & Co., a Corporation of New Jersey. Filed June 19, 1917. Serial No. 175,604. 1 Claim. (Cl. 45—32.)

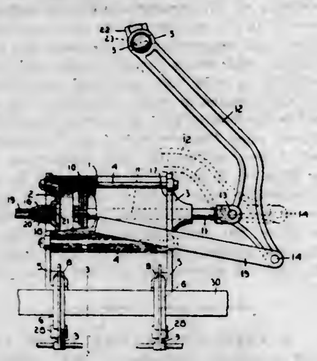
A rack-device comprising a main supporting member, an upper plate and a lower plate, said plates extending forwardly at right angles from said main supporting member, said upper plate being provided with a perforation, and said lower plate being provided with a slot, combined with a supporting rod and a bracket-shaped supporting means consisting of two members angularly disposed with relation to each in the manner of the base and hypotenuse of a triangle, said supporting bar forming the third side of said triangle, and means for attaching said supporting bar respectively to said base and said hypotenuse, consisting of a right-angled member extending from said base and secured in the end of said supporting bar, and a ring-shaped element upon the free end of said hypotenuse, said ring-shaped element encircling said supporting bar, said base being disposed in said perforation and in said slot, so as to normally bear against said main supporting member to extend said supporting bar horizontally above said upper plate, but said supporting bar being movably disposed in said perforation so as to cause said supporting bar to hang in suspended relation from said upper plate.

1,375,841. BUFFER-CHECK FOR LOOM-PICKERS. HAROLD M. GUSDORF, Indianapolis, Ind. Filed Feb. 19, 1921. Serial No. 446,444. 4 Claims. (Cl. 139—22.)



1. A buffer strap having a practically inelastic portion between elastic portions having outer surfaces pitted with cup-like indentations.

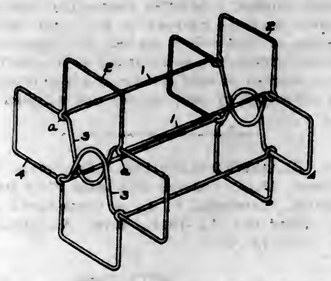
1,375,842. ICE-CREAM-CUTTING MACHINE. RICHARD HAEGER, WILLIAM SCHRANER, and PAUL HAEGER, Detroit, Mich. Filed Mar. 24, 1919. Serial No. 284,830. 4 Claims. (Cl. 107—20.)



4. A device of the character described comprising spaced beams, a platform supported on the beams, an upstanding member secured to one end of each beam and the upper end thereof curved inwardly to overlie the plat-

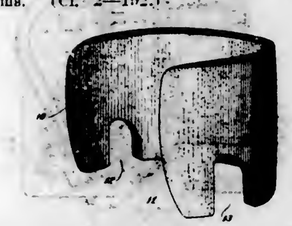
form, a vertical guide formed on the curved end of each upstanding member, a detachable plate secured to each guide, a rod operating in each guide and held in vertical position by the detachable plate, an arm formed on

each guide, a shaft supported by the arms, means connecting the shaft and vertical rods, a frame, detachable clamps secured to the frame and provided with eyes to receive the ends of the vertical rods, and blades secured in the frame.



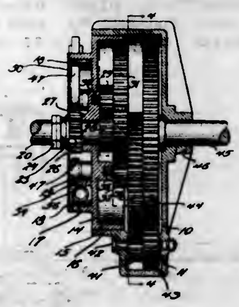
1,375,843. TIRE-PUMP. ROLAND C. HILTON, Troy, N. Y., assignor, by direct and mesne assignments, to Reece-Hilton Inc., Troy, N. Y., a Corporation of New York. Filed Mar. 12, 1919. Serial No. 282,137. 2 Claims. (Cl. 230—27.)

1. In a pump, the combination with a pump casing comprising a cylinder element and two heads or end members between which the cylinder is clamped, each end member having a foot to rest on a support, of a clamp pivotally connected to each foot and by which said pump casing may be clamped to said support, each clamp being pivoted to swing about an axis extending transversely to the cylinder, a piston operating in said cylinder, and means to actuate said piston.



1,375,844. REEL. JOHN A. HOLMQUIST, Woodlawn, Pa. Filed May 29, 1920. Serial No. 385,133. 3 Claims. (Cl. 242—115.)

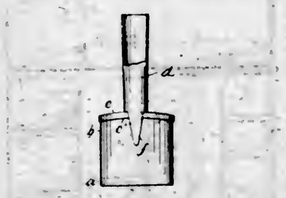
2. A reel composed of four endless lengths of wire, two bent each into three planes and consisting of a medial portion of parallel reaches and opposite terminal portions parallel one to another and perpendicular to the medial portion and consisting of bends connecting the medial reaches, the other two endless lengths being bent to the form of elongate rectangles with overlapping bends intermediate their long sides, the two members last named



articulating together the two members first named, substantially as described.

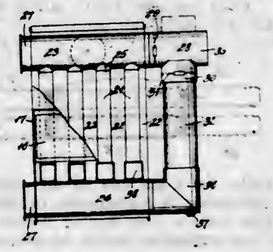
1,375,845. HEAD-PROTECTOR. CHARLES HORAN, New York, N. Y. Filed Sept. 10, 1920. Serial No. 409,320. 11 Claims. (Cl. 2—192.)

1. A head protector formed of a slab of light, resilient and slightly flexible shock-absorbing material shaped to extend about the back of the head and neck of the wearer and forward about the sides of the head sufficiently to protect the temples and being open in front and adapted to lightly grip the sides of the head through its inherent elasticity and thereby retain its position.



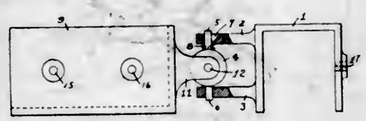
1,375,846. CHANGE-GEAR. ROBERT JENNETT, Chester, Pa. Filed May 28, 1920. Serial No. 384,848. 7 Claims. (Cl. 74—58.)

1. Change gear mechanism including a drive member; a driven member; a series of change gears adapted to operatively connect said drive and driven members; and common means movable to automatically effect movement of any of the gears of said series into operative connection with said drive and driven members; substantially as described.



1,375,847. PAINTBRUSH-FERRULE AND METHOD OF MAKING THE SAME. FRANK JOERGER, Brooklyn, N. Y. Filed Feb. 10, 1920. Serial No. 357,501. 12 Claims. (Cl. 113—112.)

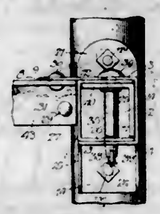
1. The method of making a flat paint brush, which consists in separately making a flat ferrule open at both ends, and a cap having a narrow flange adapted to fit over one end of the ferrule and provided with a hollow shank having integral tongues projected transversely to



the flange, and finally soldering the flange of the cap and the tongues to the top end and sides of the ferrule respectively.

1,375,848. AUXILIARY HEATER FOR FURNACES. OTTO J. KUENHOLD, Cleveland, Ohio, assignor to The Scientific Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 6, 1918. Serial No. 232,773. 3 Claims. (Cl. 257—175.)

2. A self-contained auxiliary heater for use with furnaces, comprising an outer casing having an air inlet and an air outlet, upper and lower headers therein, and a series of radiators connecting said headers, the upper header being openable at either end and having a lateral branch and thereby being adapted at three different places for connection of a smoke pipe thereto.

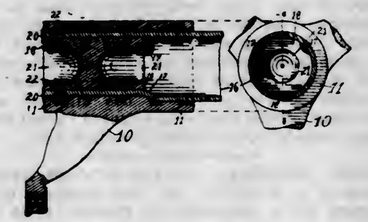


1,375,849. CLAMP. CHARLES B. LATENDORF, Bayonne, N. J. Filed June 12, 1920. Serial No. 388,534. 2 Claims. (Cl. 248—30.)

1. A device of the class described, comprising two clamp members and a ball member provided with projecting pins engaging in openings in extensions from said clamp members, one of said openings being formed with one side beveled upwardly and inwardly toward the body of the clamp to permit the ball member and pin to be slipped into the opening in an angular position and swung into a vertical position to allow the second pin to be engaged in its opening.

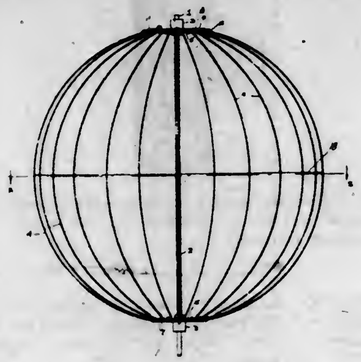
1,375,850. CORNER-BLOCK FOR BEDSTEADS. SAMUEL J. LAVEZZI, Chicago, Ill. Filed Sept. 15, 1919. Serial No. 323,785. 11 Claims. (Cl. 5—55.)

1. A corner block for bedsteads comprising a vertical plate adapted to be secured to the bedpost, two parallel plates at substantially right angles thereto, such plates terminating at their outer ends in a casing rectangular in cross section, and adapted to receive a side rail, said plates having lower edges inclined upwardly and outwardly with inwardly turned portions forming the bot-



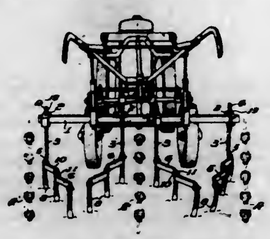
tom of said casing, means in said casing to secure such rail therein, and means on one of the two parallel plates to secure an end rail.

1,375,851. SPARK-PLUG. OSCAR M. LEICH, Genoa, Ill., assignor to Leich Electric Company, Genoa, Ill., a Corporation of Illinois. Filed Nov. 6, 1919. Serial No. 336,157. 8 Claims. (Cl. 123—169.)



1. A spark plug of the character described comprising a metallic body member and an insulating base secured therein, a main electrode carried by said body member, a second main electrode carried by said insulating base and an auxiliary electrode carried by said insulating base adjacent said main electrode and inclosing the end of said base, said two main electrodes being in juxtaposition whereby the main spark passes directly between them.

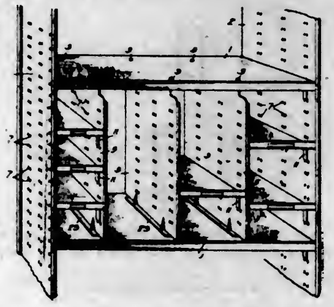
1,375,852. METHOD OF ATTACHING UNIVERSAL-JOINT SPIDERS TO TUBULAR PROPELLER-SHAFTS. ASA E. LINENDOLL, Norwalk, Ohio. Filed May 13, 1920. Serial No. 381,111. 3 Claims. (Cl. 29—148.)



1. A method of attachment for a tube to a spider which consists in drilling the forged blank of the spider and broaching away portions of the bore of said drilled spider hub to leave spaced ribs therein, shaping the end of the tube with similarly spaced grooves or inwardly bent ribs to fit said spaced ribs within the bore of said spider hub, and a similarly grooved plug attached within said tube to hold said parts in rigid attachment to one another.

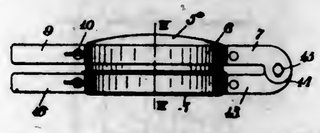
1,375,853. COLLAPSIBLE GLOBE. SARAH E. LYMAN, Cleveland, Ohio. Filed Feb. 9, 1920. Serial No. 357,319. 5 Claims. (Cl. 35—5.)

2. In a device of the character described, the combination of a central spindle, plates adjacent the ends of said spindle, a plurality of arcuate ribs pivotally attached at their respective ends to said plates so as to form a globe-like frame when extended in radial position, said ribs being adapted to fold together one against the other on opposite sides of said spindle, and means adapted thus to fold and to unfold said ribs, as desired.



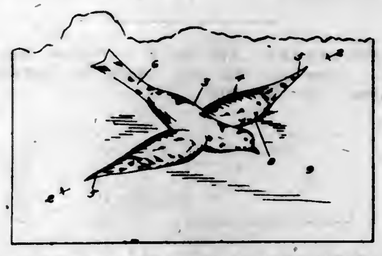
1,375,854. AGRICULTURAL IMPLEMENT. JOSEPH MADER, Philadelphia, Pa., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed June 9, 1920. Serial No. 387,523. 3 Claims. (Cl. 97—35.)

2. An attachment for a hand guided tractor comprising a supporting bar, means for adjustably connecting said bar with the tractor, a plurality of tool carrying shanks arranged in pairs, each shank having a vertical portion and a horizontal portion, means for supporting said vertical portions on said bar in vertical and longitudinal adjusted relation with respect thereto, the horizontal portion of each shank being laterally offset to provide a plurality of parallel tool seats and diagonally extending portions connecting said seats, and a ground working tool operatively supported on each of said seats, one shank of each pair of shanks being arranged so that the offset portion extends in one direction and the other shank of said pair being arranged so that the offset portion extends in the opposite direction.



1,375,855. SHELVING. JOHN B. O'CONNOR, Aurora, Ill., assignor to Lyon Metallic Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Oct. 22, 1919. Serial No. 332,461. 3 Claims. (Cl. 211—27.)

1. In shelving, the combination with the main shelf and upright partitions for supporting them, of a flat, upright divider consisting of sheet metal and having a foot for attachment to the main shelf, the foot being struck out of the metal of the divider and extending in both directions from the plane thereof and being apertured at a point in the plane of the divider for receiving a bolt or a similar fastening device, the metal of the divider being outpressed for a short distance vertically near said aperture for facilitating the insertion of the fastening device

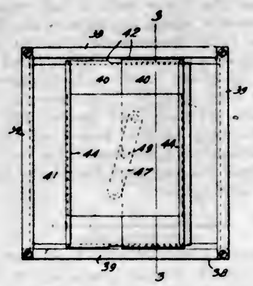


and forming on one side a shield for preventing contact with external objects and on the other side a housing for the same purpose.

1,375,856. BOX-HOLDER. WALTER C. O'KANE, Durham, N. H. Filed Jan. 28, 1920. Serial No. 354,687. 2 Claims. (Cl. 15—18.)

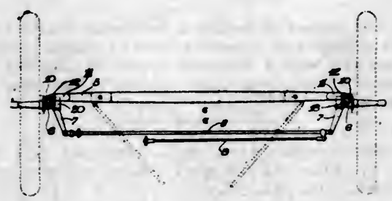
1. A holder for a box and its lid substantially as described, comprising, in combination, two frames hinged together, said frames each having flexible rim-embracing portions and adjustable means connecting the rim engaging portions whereby said engaging portions can be drawn with a regulated preasure upon the rim.

1,375,857. BAS-RELIEF DESIGN AND METHOD OF MAKING SAME. CORALIE S. OLNEY, Oakland, Calif. Filed May 19, 1919. Serial No. 298,188. 1 Claim. (Cl. 41—25.)



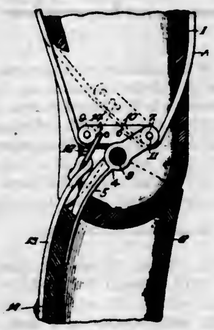
A relief comprising a suitable base of relatively heavy material, a piece of stretchable crape paper conforming to the configuration of a design disposed thereon, a portion of the material containing the design being stretched variable distances from the base, while other portions are directly attached to the base, a padding in the space where the crape material is stretched, and a hard shellac coating covering said crape material to retain the same in shape.

1,375,858. HOLDING MEANS FOR OPAQUE OBJECTS. HARVEY N. OTT and FRANK H. BUFTON, Buffalo, N. Y., assignors to Spencer Lens Co., Buffalo, N. Y. Original application filed Oct. 31, 1916, Serial No. 128,699. Divided and this application filed Nov. 13, 1919. Serial No. 337,774. 4 Claims. (Cl. 88—26.)



1. A card or object holder for projection apparatus comprising a frame, holding members mounted to slide toward

and from each other on said holder frame, a lever having sliding connections with said holding members for causing opposite movements thereof, said lever being arranged to

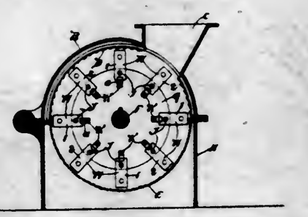


swing across a line extending perpendicular to the line of movement of the holding members toward and from each other, and an operating handle for said lever, said handle projecting from said frame.

1,375,859. STEERING MECHANISM FOR VEHICLES. ROBERT S. PIERCE and MAX R. KUEHN, Milwaukee, Wis. Filed Mar. 17, 1920. Serial No. 366,495. 3 Claims. (Cl. 280—96.1.)

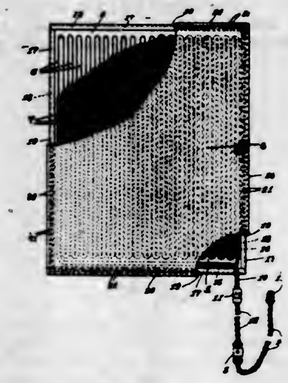
1. In an automobile the combination, with the front axle, wheel spindle and the steering arm connected to the spindle, of a member having a tubular portion and arms extending rearwardly therefrom, a bolt passing through said arms and said spindle, a pivot bolt passing through said tubular portion and the end of the axle, an apertured boss on said member receiving the threaded end of the steering arm, and a clamping nut on the threaded end of said steering arm and engaging the boss.

1,375,860. ARTIFICIAL LIMB. JAMES F. ROWLEY, Chicago, Ill. Filed July 6, 1920. Serial No. 394,062. 11 Claims. (Cl. 3—2.)



1. In an artificial leg upper and lower leg-sections pivoted together, means operable by an extension of the body of the wearer for swinging the lower leg-section toward straightened position with respect to the other leg-section, and a resilient leg flexing means opposed to the straightening action.

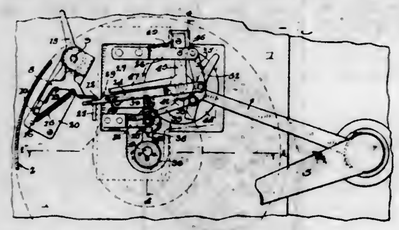
1,375,861. SURGICAL SWAB. WILLIAM H. SHARP, Chicago, Ill., assignor to Bauer & Black, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1918. Serial No. 251,093. 3 Claims. (Cl. 128—269.)



1. A surgical swab comprising a liquid container having a constricted end adapted to be broken to release the liquid and a shoulder back of said end, a fabric wrapping arranged over said constricted end and forming a brush, and a coating of water-glass uniting said constricted end and said wrapping, whereby, when said end is broken the fragments of the container will adhere to said wrapping.

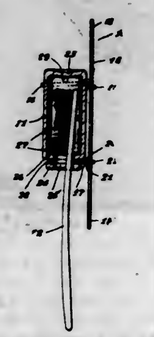
1,375,862. GRINDER AND SHREDDER. HARRY J. SHELTON, St. Louis, Mo. Filed Apr. 26, 1920. Serial No. 376,707. 7 Claims. (Cl. 83—11.)

1. A grinding and shredding machine comprising a housing, a grinding chamber, disks rotatably mounted in said chamber, pivot rods extending between said disks, a plurality of hammers pivotally mounted on said pivot rods between adjacent disks, and means engaging the sides of the inner ends of said hammers and separate from and independent of said pivot rod whereby the hammers on a pivot rod are maintained in spaced relation.



1,375,863. ELECTRICAL APPLIANCE. JOHN T. STANTON, Seattle, Wash. Filed June 1, 1920. Serial No. 385,782. 2 Claims. (Cl. 219—46.)

1. The method of fabricating an electro-therapeutic blanket which consists in cutting a sheet of textile fabric of the desired size and treating the same with a suitable

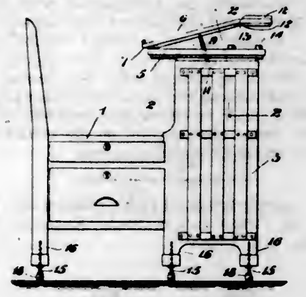


solution to stiffen it then treating it in a solution to make it fireproof and a non-conductor of electricity, then taking a strip of tape and treating it in the same manner as said sheet of textile fabric, then drying said sheet of fabric and said tape, then taking insulated wire and laying it on said sheet of textile fabric and superposing the said strip of tape on said wire and stitching both to said sheet, then cutting two sheets of textile fabric to form the upper and lower covering for said blanket, then laying the first named sheet with its associated wiring and tape on the lower covering sheet, then turning the edges of said lower covering upwardly and inwardly so that said edges overlap the edges of the first named sheet, then superposing the upper covering on the first named sheet and turning its edges downwardly and inwardly so that the last named folded edges will lie substantially on the folded edges of the said lower covering, the edges of said upper covering being folded in such manner as to leave a portion of the same projecting beyond the folded edges of the lower covering and stitching the edges of all the sheets together.

1,375,864. AUTOMATIC STOP FOR SOUND-REPRODUCING MACHINES. OLE O. STORLE, Tacoma, Wash. Filed July 24, 1919. Serial No. 313,040. 7 Claims. (Cl. 192—116.)

1. In an automatic stop for sound reproducing machines the combination with a brake, means tending to apply the brake and means for holding the brake in off position, of a reciprocatory brake releasing member movable transversely to its reciprocatory movement into and out of operative position, a frictional actuating connection with the stylus arm tending to shift the brake releasing member out of operative position, and means operatively connected with the turn table spindle and with the brake releasing member and adapted to constantly reciprocate said member longitudinally while rotation of the spindle continues and to periodically shift it laterally into operative position for releasing the brake when the inward movement of the stylus arm is arrested.

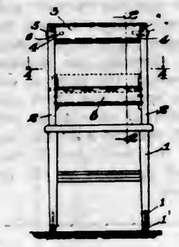
1,375,865. TOOTHBRUSH-RECEPTACLE AND HOLDER. ANTON G. SULAK, Seattle, Wash. Filed July 1, 1920. Serial No. 393,466. 1 Claim. (Cl. 248—63.)



In a tooth brush repository the combination of a support, a tubular receptacle adapted to be disposed thereon comprising a body portion, a neck portion on one end of the said body portion having an axially disposed mouth formed therein, and an exteriorly disposed annular groove formed thereon, an annular shoulder formed by the said neck portion on the inner wall of the said receptacle adapted to releasably engage the bristles of a tooth brush, a band adapted to be fixedly secured to the said support adjacent the upper end thereof and adapted to encircle and retain the upper end of the said receptacle, a flexible looped member adapted to be fixedly secured to the said support adjacent the lower end thereof and adapted to seat in the aforesaid annular groove and to releasably engage the aforesaid neck portion of the said receptacle, ventilating means for the said receptacle and securing means for the said support.

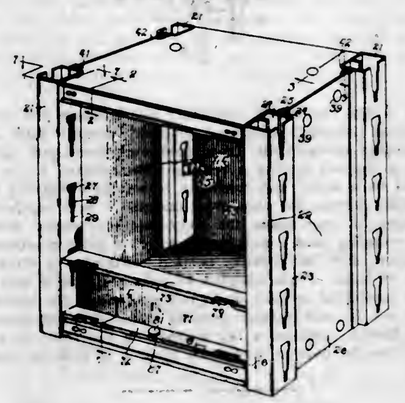
1,375,866. STENCIL-SHEET AND PROCESS FOR MAKING IT. ALBERT F. SULZER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 5, 1916. Serial No. 89,226. 4 Claims. (Cl. 41—46.)

1. The process of making a waterproof opaque stencil paper consisting in covering a sheet of translucent paper on one side with a removable opaque coating and then applying a waxy waterproof coating to the other side of the sheet.



1,375,867. DESK-CHAIR. EARL THOMPSON, New York, N. Y. Filed Dec. 27, 1917. Serial No. 209,035. 3 Claims. (Cl. 155—128.)

1. In a device of the character described, the combination of a pedestal, a bracket member on the pedestal, a bed member supported on the bracket and adapted to be adjusted horizontally, a desk tablet hinged to the bed member at their inner marginal edges, whereby the desk member may be inclined, and a shelf section on the outer edge of the desk tablet and supported solely thereby in a horizontal position when the tablet is inclined.

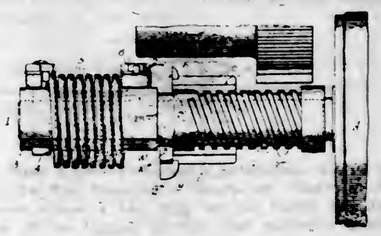


1,375,868. CHAIR. EARL THOMPSON, New York, N. Y. Filed Dec. 20, 1918. Serial No. 267,576. 4 Claims. (Cl. 155—158.)

4. In a chair the combination of a back, a cross piece pivoted thereon at approximately the height of the shoulders of the occupant and adapted to swing freely to adjust itself to the normal chest position of the occupant, means for limiting the swing of the cross piece, a lumbar rest positioned on the back below the cross piece, means for

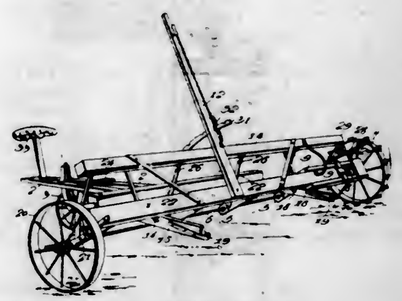
adjustably positioning the lumbar rest and means for adjusting the height of the chair substantially as shown and described.

1,375,869. METAL SHELVING. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1917. Serial No. 198,408. 27 Claims. (Cl. 211—27.)



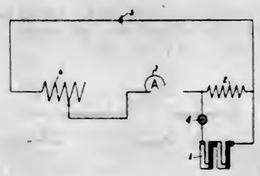
1. Metal shelving comprising: uprights, shelves carried thereby, a vertical wall closing the space between two uprights, and clips interlocked with said shelves and said wall for holding said wall in position.

4. Metal shelving comprising: uprights having elongated slots or perforations, a vertical wall for closing the space between two of said uprights and provided with perforations, and clips for securing said wall to said uprights,—one of said clips having a bent tongue engageable in a perforation in said wall and having a bent end at the other adapted upon subsequent rotative movement of the clip to engage in one of said slots.



1,375,870. ENGINE-STARTER. HENRY E. VAN NESS, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Mar. 20, 1919. Serial No. 283,773. 11 Claims. (Cl. 74—7.)

1. In an engine starter, the combination of a rotatable member, a second member mounted thereon for longitudinal movement thereof from a normal position to an advanced position to cause engagement with a part of the engine to be started, and for rotary movement therewith, and means carried by the second member and arranged at the initiation of its longitudinal movement to

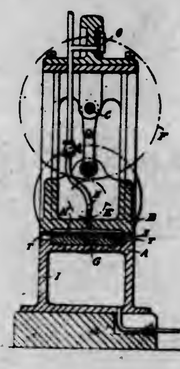


contact the rotatable member for imparting thereto a yielding resistance but free from such rotatable member in its further longitudinal movement.

1,375,871. ROTARY-ROD WEEDER. LOUIS C. VAN PATTEN and JOEL B. WOLFE, Cheney, Wash., assignors to Rotary Rod Weeder and Manufacturing Company, Incorporated, Cheney, Wash. Filed Sept. 9, 1920. Serial No. 409,094. 7 Claims. (Cl. 97—25.)

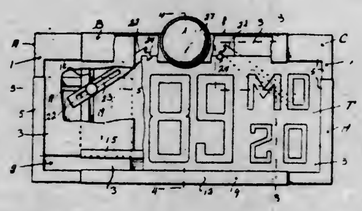
2. In rotary rod weeders wherein is provided a main beam carrying the rod bearing standards in which the rotary rod is located and carrying the rotary rod driving mechanism and a tiller frame hinged to the main beam; a hitch bar located to the rear of the main beam, draft members connected to the hitch bar and projecting forwardly of the main beam and hinged thereto, and a lifting lever secured to the main beam.

1,375,872. ELECTRIC PYROMETER. THOMAS W. VARLEY, New York, N. Y. Filed Jan. 15, 1918. Serial No. 211,959. 3 Claims. (Cl. 73—32.)



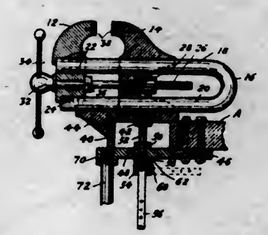
1. The combination with a source of electromotive force of a resistance, a variable resistance and a current responsive indicating instrument connected in series with said source, a shunt to said first mentioned resistance including a thermo-couple and means for opening and closing said shunt without affecting the series connection of said resistances and instrument.

1,375,873. BUTTON. JINDŘICH WALDES, Prague, Bohemia. Filed Aug. 1, 1919. Serial No. 314,755. 2 Claims. (Cl. 24—90.)



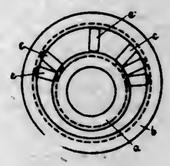
1. A button, comprising a member having a shank and a base to which the shank is attached and which is grooved and ribbed on one side, and a socket member comprising a hollow body portion formed on its under side with grooves and ribs corresponding with those in the base of the shank member, said hollow socket member containing locking devices which permit the shank to be inserted in the hollow body to prevent its withdrawal therefrom when once engaged therewith.

1,375,874. MANUFACTURE OF PRINTING-PLATES OR SURFACES FOR PRINTING FROM. ALFRED JAMES NEILL WALKER, Liverpool, England. Filed Jan. 25, 1918. Serial No. 213,788. 1 Claim. (Cl. 101—27.)



An apparatus of the character described comprising a table, a matrix carried by the table, a follower having a recess, an inflatable mattress in said recess above the lower edge thereof, said follower and mattress being spaced from the table in lowered position whereby when the follower is brought down to its lowermost position, the sheet laid upon the matrix will partially enter the recess below the mattress while permitting the gas or liquid between the sheet and the matrix to escape through the space between the table and the follower.

1,375,875. LICENSE-TAG HOLDER. CHARLES R. WALLACE, Baltimore, Md. Filed Feb. 13, 1920. Serial No. 358,363. 1 Claim. (Cl. 40—10.)

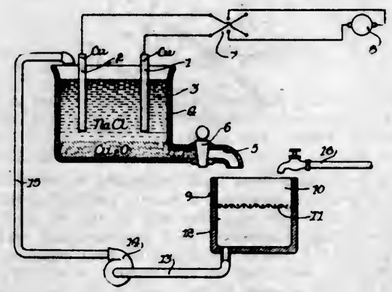


A license tag holder comprising an intermediate and two outer sections, each of said sections comprising a pair of telescopically engaged plates, the upper portion of the lower plate of each of the outer sections having a laterally disposed slot, the upper portion of the lower plate of the intermediate section having spaced openings formed in the end portions thereof, said openings registering with vertically disposed slots formed in the end portions of the upper plate of said intermediate section, a bolt extending through the registering portions of said slots and openings, the head of said bolt being disposed between the upper and lower plates of the outer sections, a longitudinally slotted tag holding arm mounted on the bolt and engaged with the head thereof, and a nut threaded on the portions of the bolts extending through the spaced openings in the lower plate of the intermediate section.

1,375,876. VISE. JOSEPH L. WARE, Minneapolis, Minn. Filed June 20, 1919. Serial No. 305,590. 2 Claims. (Cl. 81—41.)

1. A vise comprising stationary and movable jaw members, an inverted cupshaped member integral with and extending downwardly from said stationary jaw member, a support having a rear portion adapted to be secured to a bench and having a forwardly extending flat disklike portion for the lower margin of said cupshaped member to rest upon for swiveling movement, means for clamping said cupshaped member in desired adjusted position, said flat disklike portion containing a circular row of holes, a pin adapted to pass through a hole in said cupshaped member and enter any one of the holes of said row for additionally securing said cupshaped member in adjusted position, a lug member on the front of said flat disk-like portion, and a leg secured to said lug member.

1,375,877. ROLLER-BEARING. ERNST HJALMAR WALODDI WEIBULL, Gottenborg, Sweden, assignor to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Filed Apr. 26, 1919. Serial No. 292,027. 1 Claim. (Cl. 64—39.)

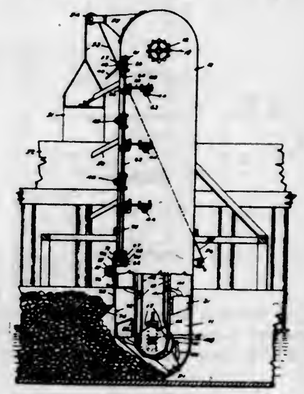


A method for inserting disk-shaped rollers in an anti-friction roller bearing having two race-rings and grooves in both the race-rings consisting in inserting the rollers between the race-rings when turned at right angles to their normal operative position with the middle plane of each roller perpendicular to the axis of rotation of said roller in a plane through the axis of the bearing while the two race-rings are held eccentrically in relation to each other, then pushing the rollers close together, then bringing the race-rings into concentric relation and distributing the rollers along the whole circumference of the race-ring and finally 90 degrees into their normal operative position.

1,375,878. WINDSHIELD-CLEANER. AUGUSTUS W. WESSOLECK, New Britain, Conn. Filed Jan. 25, 1921. Serial No. 439,873. 5 Claims. (Cl. 15—59.)

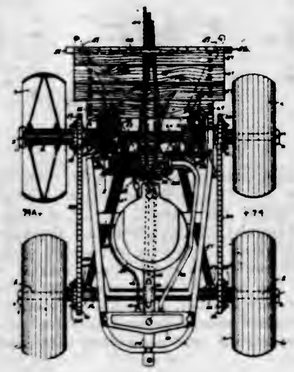
1. In a windshield cleaner, a channeled portion, a wiper strip located therein and projecting beyond the edge thereof, a well carried by said channeled portion for containing liquid, means for conveying liquid by capillary action from said well to said channeled portion and to said wiper strip, means for supporting said cleaner upon a windshield and in a substantially upright position, said means being movable whereby said strip may be moved laterally to clean the surface of said shield.

1,375,879. BRUSH AND METHOD OF MANUFACTURING THE SAME. HUGH H. WIKLE, Chicago, Ill. Filed Apr. 13, 1918. Serial No. 228,309. 12 Claims. (Cl. 204—54.)



1. A brush of the class described consisting of a mixture of finely subdivided metal containing copper, with powdered graphite, said mixture being bonded together solely by pressure.

1,375,880. BUCKLE. WARREN E. WILLIS, North Attleboro, Mass., assignor to E. I. Franklin & Co., North Attleboro, Mass., a Copartnership consisting of Wallace G. Franklin, Clarence W. Fisher, and Elton B. Fisher. Filed Feb. 7, 1921. Serial No. 442,966. 4 Claims. (Cl. 24—191.)

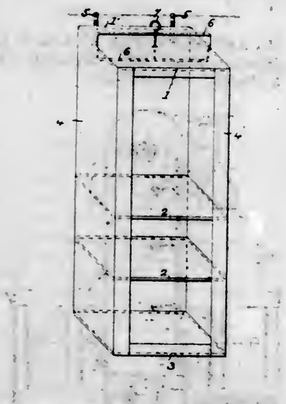


1. In a buckle, a body part; a clamping member having a relatively short bearing for a pintle adjacent the clamping jaw; a flexible pintle engaging the relatively short bearing and the body part to connect the two parts with capacity for rotative and reciprocative relative movement, substantially as described.

1,375,881. BUCKET ELEVATOR. CHARLES L. WILSEN, Manette, Wash. Filed Mar. 17, 1920. Serial No. 366,630. 5 Claims. (Cl. 193—6.)

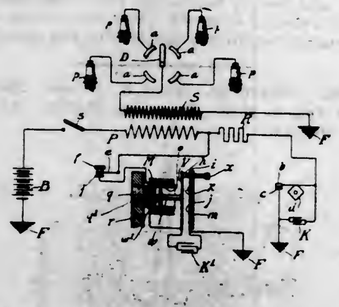
1. In an elevator of the class described an upright trunk, having a plurality of discharge openings arranged at different elevations, endless conveyer chains movable within said trunk, buckets carried by said chains, each of said buckets having a hinged bottom whose front edge is arranged to swing downwardly and a hinged front side whose bottom edge is arranged to swing outwardly, means carried by said buckets for opening and closing said bottom and said swinging front side and devices within said elevator trunk for controlling said opening and closing means.

1,375,882. TRACTOR. FRED D. WILSON, Moline, Ill. Filed Feb. 4, 1919. Serial No. 274,911. 14 Claims. (Cl. 180—14.)



1. In a tractor, the combination of four driving wheels, two separate power transmitting mechanisms, each having a line controlled clutch operating only when said line is taut and automatic locking means acting simultaneously with the release of said clutch, substantially as described.

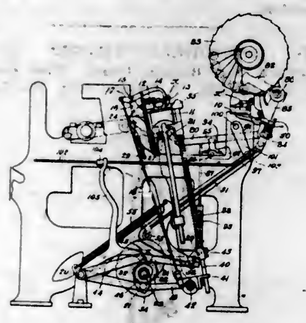
1,375,883. FOLDING WARDROBE. MARIE WOOLSON, Chicago, Ill. Filed Jan. 10, 1921. Serial No. 436,108. 2 Claims. (Cl. 45—37.)



1. In a folding wardrobe structure of the type described, an upper and main frame of a rectangular skeleton form,

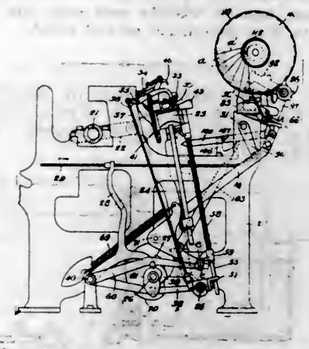
and a suspension frame of a rectangular skeleton form pivotally secured to said main frame at the midwidth of

the same and provided with an upwardly extending suspending hook said suspension member being adapted to fold into parallel and compact relation to said main frame.



1,375,884. ELECTRIC IGNITION APPARATUS. FRANK AIKEN, Elkins Park, Pa., assignor to Arthur Atwater Kent, Ardmore, Pa., doing business as Atwater Kent Manufacturing Works, Philadelphia, Pa. Filed June 20, 1919. Serial No. 305,664. 15 Claims. (Cl. 175—357.)

1. Ignition apparatus comprising the combination with an induction coil, of a source of current, vibrator mechanism interrupting the primary circuit of said induction coil at substantially constant frequency throughout a wide range of variation of effective voltage of said source of current, said mechanism comprising a magnet winding in series with the primary winding of said induction coil, a stationary core member, a movable core member, an interrupter contact moved by said movable core member, and a closed circuit tube associated with said winding.

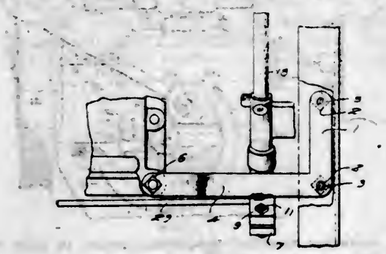


1,375,885. AUTOMATIC WEFT-REPLENISHING LOOM. LEONARD AITKEN, Lawrence, Mass., assignor to Lawrence Duck Company, Lawrence, Mass., a Corporation of Massachusetts. Filed Sept. 9, 1915, Serial No. 49,763. Renewed June 9, 1919. Serial No. 303,001. 32 Claims. (Cl. 139—85.)

1. In a weft-replenishing loom, the combination with a shuttle box having a shuttle-binder and an overhanging shuttle-guard, of a shuttle-engaging device mounted upon a pivot arranged under, and movable with, said shuttle-box, said device being arranged to extend between said shuttle-binder and said shuttle-guard to engage the rear side of the shuttle near the top, and means arranged to

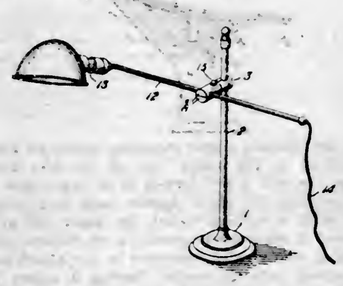
actuate said device when the shuttle-box is inclined toward the rear of the loom, to move the shuttle toward the front of the loom.

1,375,886. WEFT-REPLENISHING LOOM. LEONARD AITKEN, Lawrence, Mass., assignor to Lawrence Duck Company, Lawrence, Mass., a Corporation of Massachusetts. Filed Apr. 13, 1914, Serial No. 831,355. Renewed Oct. 13, 1919. Serial No. 330,528. 23 Claims. (Cl. 139—85.)



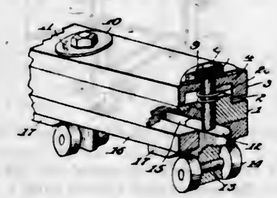
1. A weft-replenishing loom comprising in combination a movable bobbin magazine, a shuttle support, means arranged to move said magazine step by step to place the bobbins therein successively in a predetermined relation to said support, means movable with said magazine for carrying the weft ends of the bobbins, a thread-guide affixed to said support in the path of the weft-ends to register the latter relatively to the throat of the shuttle, means arranged to transfer a bobbin from said magazine to the shuttle on said support, and means arranged to depress the registered weft end exteriorly of the shuttle, to move such weft end in to the throat of the shuttle, said thread-guide being arranged to guide the weft end to the throat of the shuttle.

1,375,887. STEERING-GEAR CONNECTION FOR MOTOR-VEHICLES. THOMAS L. ANTHONY, Lincoln, Nebr. Filed Jan. 6, 1920. Serial No. 349,722. 3 Claims. (Cl. 74—79.)



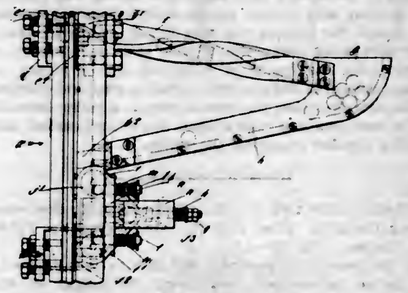
3. A steering gear connection for motor vehicles comprising the combination with the steering post and steering arms carried thereby and provided with a turned lower end with a ball formed thereon, and the steering rods of the steering mechanism, of an angular bracket secured to the vehicle provided with an upturned portion, of an operating arm pivotally mounted at its upper end upon

the upturned portion of said supporting bracket and extended in an inclined plane at a right angle to the inclined plane of the steering post, said oscillating arm having an enlarged lower end formed into a downwardly opening elongated socket with a longitudinal slot in one side



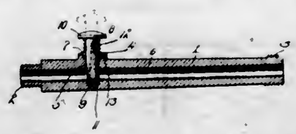
and opening upon the lower end thereof, the turned lower end of the arm carried by the steering post being extended through the slot and working in the socket of said oscillating arm, and a ball connection carried by the lower portion of said oscillating arm for connection with one of the steering rods.

1,375,888. BRACKET. EDWARD G. BAER, Orrville, Ohio, assignor to The Will-Burt Company, Orrville, Ohio, a Corporation of Ohio. Filed Apr. 3, 1920. Serial No. 370,950. 3 Claims. (Cl. 248—3.)



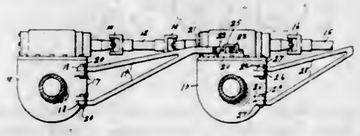
1. A bracket comprising an upright support, a longitudinally split clamping member provided with a transverse bore for the reception of said upright support, a cylindrical extension upon said clamping member, a pair of clamping blocks provided with recesses to accommodate said cylindrical extension, each of said blocks being provided with a depression, an arm located in the depressions in said blocks and a clamping screw located through said blocks and arranged to clamp the arm between the blocks, and to clamp the blocks upon the cylindrical extension of the clamping member and to clamp the split clamping member upon the upright support.

1,375,889. FEEDING MECHANISM. OREN F. BALTZLEY, Hagerstown, Md. Filed Mar. 4, 1920. Serial No. 363,346. 13 Claims. (Cl. 273.)



3. A feeding mechanism comprising in combination a pair of reciprocable grippers, means for closing said grippers comprising a bar having a reciprocable movement relative to the grippers, a cam on said bar, means on one of the grippers adapted to be engaged by said cam, and cam means for reciprocating said bar and cam and imparting a reciprocatory feeding motion to said grippers.

1,375,890. GRINDING OF ANTIFRICTION-ROLLERS. JOHN BASS, Bois-Colombes, France. Filed Mar. 2, 1918. Serial No. 220,003. 9 Claims. (Cl. 51—130.)



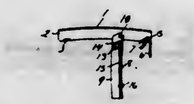
1. For grinding antifriction rollers the combination with grinding means of a rotary cage for supporting the rollers and means for automatically removing and returning the rollers to the cage with their axes reversed during each revolution of the cage.

1,375,891. HOSE-NOZZLE. BERLIN BENDER, Washington, D. C. Filed Mar. 17, 1920. Serial No. 366,535. 1 Claim. (Cl. 251—137.)

A hose nozzle formed with a substantially central bore, one end of said nozzle being formed with means for attaching the same to a hose and at its other end being provided with means for attaching a discharge-nozzle thereto, an enlargement on said nozzle intermediate of said ends, said enlargement formed with an opening communicating with said bore and having a cup-shaped recess surrounding said opening, said nozzle formed with an interiorly located recess in alinement with said opening, a headed valve slidably mounted in said opening and adapted to pass across said bore and seat in said recess when the valve is depressed to closed position and a coil spring engaging said headed valve, at one end and seated in said recess at its other end normally maintaining said valve in open position leaving said bore unobstructed.

1,375,892. TRUCK FOR MOTOR-DRIVEN VEHICLES. JOHN Q. BLACK, Nashville, Tenn. Filed Sept. 13, 1920. Serial No. 409,875. 3 Claims. (Cl. 180—22.)

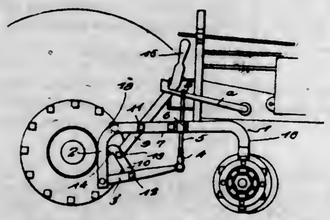
1. In combination with a vehicle frame, side members pivotally engaged therewith for swinging movement in a vertical direction, columns depending from the opposite



end portions of each of the side members, bearing blocks arranged in each of the columns, said column and block having relative movement in a vertical direction, driving shafts disposed through the bearing blocks, wheels mounted thereon, a differential mechanism coacting with each pair of transversely related shafts including a casing, a driving connection between the differential mechanisms, a driving means coacting with one of the differential mechanisms, means coacting with the casings of both of the differential mechanisms for holding one of said mechanisms against rotary movement, means coacting with the casing of the second differential mechanism and the frame for holding said second casing against rotary movement, the means for holding the first named casing against rotary movement comprising a pair of arms hingedly connected with the casing at vertically spaced points, said arms converging toward the second casing and continued by an arm overlying the second casing, a roller carried by the second arm and riding upon the second casing, and a holding bracket overlying the roller.

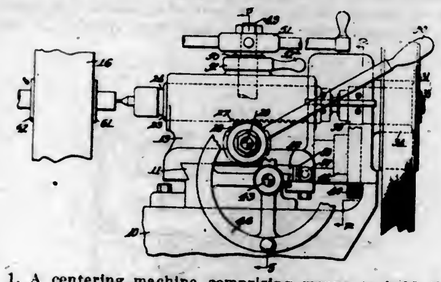
1,375,893. INFANT FOOD. FREDERICK H. BORCHERDT, Oak Park, Ill. Filed July 29, 1916. Serial No. 112,008. 4 Claims. (Cl. 99—11.)

1. The process of making a dry malt extract product for use as an infant food, comprising the boiling of wheat flour, adding malt soup extract to the boiled flour, leaving free starch in the mixture, and then drying and reducing the solution to a powder.



3. A malt extract product for use as an infant food, comprising a dry substance containing boiled wheat flour with free starch and malt soup extract in powdered form.

1,375,894. BELT-BUCKLE. ROY L. BOYER, Madison, Wis. Filed Mar. 2, 1921. Serial No. 449,196. 1 Claim. (Cl. 24—194.)

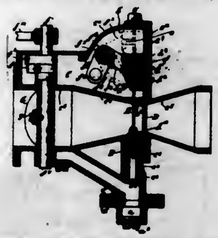


In a device of the kind described, a cover with a latch pivotally secured within the same; a spring actuated clamping bar disposed in guides through each side of said latch, said guides disposed at an acute angle to the bottom in the direction of the pivots; and a means for securing the cover to one end of a belt.

1,375,895. CLUTCH OPERATING AND HOLDING DEVICE. JOSEPH V. BRUNÉR, David City, Nebr., assignor to Edward L. Spatz, Bruno, Nebr. Filed Sept. 8, 1919. Serial No. 322,339. 6 Claims. (Cl. 74—39.)

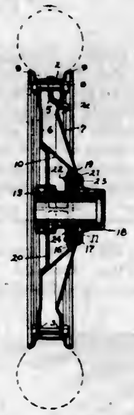
1. An attachment of the class described comprising a frame, a lever fulcrumed to said frame, a link connected to said lever and adapted to engage the clutch pedal of a motor vehicle, and toggle links connected to said frame and said lever, one of said toggle links being provided with a handle extension.

1,375,896. CENTERING-MACHINE. GEORGE J. CARSON, Worcester, Mass. Filed Apr. 9, 1919. Serial No. 288,673. 7 Claims. (Cl. 29—26.)



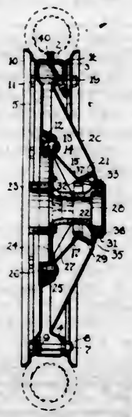
1. A centering machine comprising means to hold the stock, a cross head, a pair of spindles rotatably mounted in substantially parallel relation in said cross head, mechanical means to feed the cross head transversely of the stock, and mechanical means to feed one spindle longitudinally of the stock.

1,375,897. HEEL-FASTENING DEVICE. LEWIS A. CHAMBERLIN, De Soto, Mo. Filed Mar. 15, 1920. Serial No. 365,854. 3 Claims. (Cl. 36—34.)



1. In combination, a shoe including a sole, an attaching plate secured to the under face of the heel attaching portion of the sole, a heel formed in its upper face with a recess receiving the plate therein, said heel being also provided with a vertical socket, the inner end of which is increased in diameter to provide a continuous shoulder, a depending stud rigidly connected to the attaching plate and extending into the socket, having a socket formed in its lower end, said stud being eccentrically disposed with respect to the periphery of the plate, and a conical spreader seated in the bottom of said first socket and extending into the socket in said stud, serving to expand the lower edge of said stud beneath the shoulder when the heel is forced against the sole.

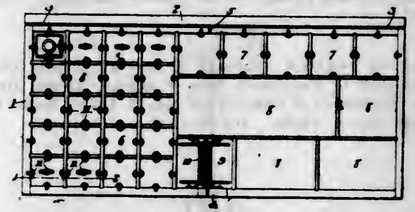
1,375,898. CARBURETER. ERNEST F. CIGLIA and LOUIS F. PELLETIER, New York, N. Y., assignors, by mesne assignments, to E. & E. Carbureter Company, Inc., a Corporation of New York. Filed Sept. 11, 1918. Serial No. 253,558. 8 Claims. (Cl. 261—44.)



1. In a carbureter the combination of a Venturi tube constructed to converge an air stream about the axis of its throat, a fuel orifice so arranged that its axis will be transverse to the axis of said Venturi tube, a needle valve for controlling the outflow of fuel through said orifice, a valve fitted to said Venturi tube so as to operate in a plane transverse to the axis of said Venturi tube and in close proximity to said fuel orifice, a valve in the outlet portion of said Venturi tube controlling the outflow of the mixture and means whereby all three of said valves can be operated simultaneously, substantially as specified.

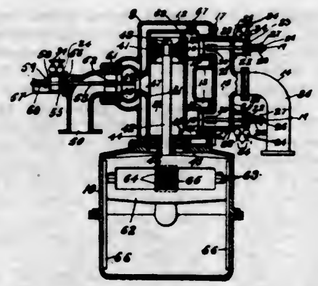
1,375,899. PRESSED-STEEL WHEEL. JAY S. CULP, Cleveland, Ohio, assignor to The Reliance Wheel Co., Youngstown, Ohio, a Corporation of Ohio. Filed Aug. 6, 1919. Serial No. 315,608. 8 Claims. (Cl. 301—63.)

1. A pressed steel vehicle wheel, comprising a hub having a flange, a hub cap screw-engaged with said hub, separate rear and front plates clamped with said flange and hub cap, locking members extending through said flange and both plates, and means extending through said members adapted to lock said hub-cap.



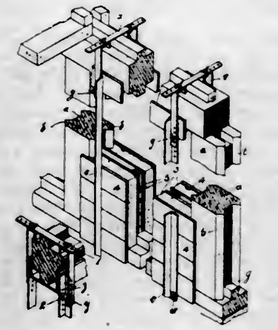
1,375,900. PRESSED-STEEL VEHICLE-WHEEL. JAY STANLY CULP, Cleveland, Ohio, assignor to The Reliance Wheel Co., Youngstown, Ohio, a Corporation of Ohio. Filed Oct. 6, 1919. Serial No. 328,670. 11 Claims. (Cl. 301—63.)

11. A vehicle wheel, comprising a hub, a pair of disks having abutting central portions provided with openings surrounded by notches and teeth, and a hub cap adapted to clamp said disks together having a locking key adapted to interlock with the teeth on both disks.



1,375,901. MEDICINE-CABINET. HAROLD L. DREW, Trinidad, Colo. Filed July 31, 1920. Serial No. 400,334. 4 Claims. (Cl. 217—52.)

1. A portable medicine cabinet or container, comprising a series of compartments or cells formed by intersecting partitions and the outside walls of the cabinet, each compartment or cell having a series of removable cushioning elements, the walls of the compartments formed



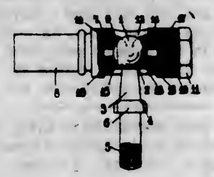
by the intersecting partitions being provided with double cushioning elements and the outside walls of the outside compartment with single cushioning elements.

1,375,902. INTERNAL-COMBUSTION ENGINE. CHARLES DRILL, St. Louis, Mo. Filed Mar. 16, 1920. Serial No. 366,268. 7 Claims. (Cl. 123—63.)

1. An internal combustion engine of the explosive type, comprising a crank case, a crank shaft, a cylinder closed at both ends mounted on said crank case, a piston located within the cylinder, a piston rod secured to the piston and extending into the crank case, means for connecting the crank shaft and piston rod, a pair of inlet ports disposed on one and the same side of the cylinder, a single exhaust port located on the opposite side of said cylinder and midway between said inlet ports, inwardly operating valves located in the intake ports, an outwardly operating valve located in the exhaust port, said valve adapted to be unseated by the pressure within the cylinder, and a manifold secured to the cylinder at the inlet ports.

1,375,903. CONCRETE AND LIKE STRUCTURE. ALFRED JOHN DUNN, Birmingham, England. Filed Dec. 23, 1918. Serial No. 267,974. 4 Claims. (Cl. 72—16.)

1. In a structure of the class described, a vertical member having a vertical fillet or fillets on one side, each

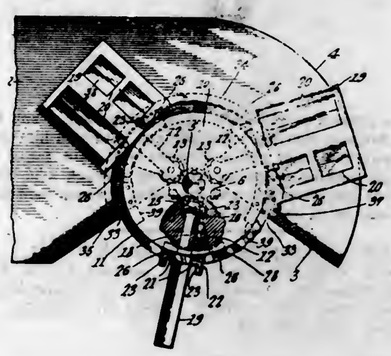


fillet being provided with oppositely beveled faces which converge to form an edge, said faces being at right angles to each other, and a molded wall member one end of which is joined to said vertical member and keyed by said fillet.

1,375,904. GLOVE. HERMAN A. GILLIAN, Toledo, Ohio, assignor to The Bacon Bros. Company, Toledo, Ohio, a Corporation of Ohio. Filed May 7, 1920. Serial No. 379,432. 1 Claim. (Cl. 2—9.)

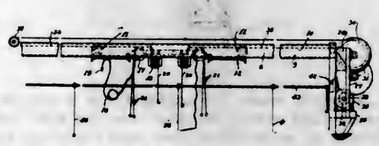
A glove including an integral thread fabric body providing finger fronts and backs, said body serving as a lining for the glove front, a one-piece fray resisting facing for the fingers and palm over said lining, fray resisting fourchettes, means providing a folded seam at the fourchettes uniting the finger front glove body as a lining to the facing, and means providing a flat seam connection between the fourchettes and the back body portion, said fourchettes extending to render the glove seamless between the fingers with but a single thickness of material between the fingers, the body portion extending to render the glove internally seamless from the fingers to the wrist, except as to a seam from the little finger to the wrist, all seams of said glove about the fingers and palm including said fray resisting material in combination with the thread fabric of the glove body.

1,375,905. BALL-AND-SOCKET JOINT FOR LINK-WORK. ARTHUR GREEN, Coventry, England. Filed Sept. 27, 1919. Serial No. 326,911. 1 Claim. (Cl. 287—90.)



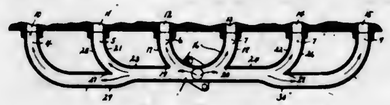
A ball and socket joint comprising a socket member provided at one end with a longitudinally bored socket having diametrically arranged apertures extending through its wall, a plug closing the open end of the socket, pads arranged in the socket and having oppositely disposed parti-spherical seats, a ball member having a spherical head arranged in the socket and engaging said seats and a shank fixed to said head and extending through one of said apertures, the aperture through which the shank extends being of sufficient length to permit a relatively large movement of the shank and of a width greater than the thickness of the shank to permit less movement of the shank in a direction at right angles to the first mentioned movement, the diameter of the spherical head being greater than the width of the last mentioned aperture to prevent the head from passing through said aperture, the other aperture being sufficiently large to permit the head to be passed through the same.

1,375,906. BALL CATCHER AND THROWER. WILLIAM HAAS, Milwaukee, Wis. Filed Mar. 9, 1920. Serial No. 364,530. 1 Claim. (Cl. 46—59.)



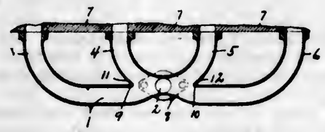
A ball catcher and thrower comprising a member having a handle portion and a head portion provided with an arcuate edge, the head portion having a longitudinally disposed slot and a circular opening communicating with the slot, a basket applied to one side of the head and consisting of a single piece of wire having side portions lying at the opposite side of the slot in the head portion and leaving the opening in the head portion uncovered.

1,375,907. PROPELLER. THEODORE L. HELSABECK, Brandford, Fla. Filed Jan. 28, 1921. Serial No. 440,704. 8 Claims. (Cl. 170—153.)



1. A propeller including spaced revoluble members, a series of paddles carried by one of the members and mounted for rotation about radial axes, means upon the members for engagement with the paddles to hold them in propelling positions, and means for successively releasing the paddles, shifting them to feathering positions, and maintaining them in feathering positions during part of the rotation of the propeller.

1,375,908. CONVEYER-SYSTEM CONTROL. ETHAN N. HESCOCK, Westfield, N. J., assignor to New Jersey Foundry & Machine Company, a Corporation of New Jersey. Filed Apr. 5, 1920. Serial No. 371,504. 12 Claims. (Cl. 212—23.)



1. In combination, overhead trolley tracks; a trolley thereon; a drive means mounted at one end of said tracks and adapted to drive said trolley and provided with a switch shaft extending substantially from end to end of said tracks parallel thereto; and operating levers fixed at intervals along said switch shaft and provided with pendant flexible operating means.

1,375,909. MANIFOLD. ARTHUR HOLMES, Canton, Ohio. Filed Dec. 19, 1917. Serial No. 207,868. 9 Claims. (Cl. 123—52.)

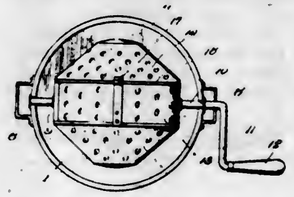
1. An inlet manifold for multi-cylinder engines comprising a main conduit having off-set portions and branch conduits communicating with the main conduit adjacent the off-set portions, to form deflecting surfaces projecting across portions of the main conduit.

1,375,910. MANIFOLD. ARTHUR HOLMES, Canton, Ohio, assignor to The Holmes Automobile Company, Canton, Ohio, a Corporation of Ohio. Filed Apr. 28, 1920. Serial No. 377,360. 2 Claims. (Cl. 123—52.)

1. An inlet manifold for multi-cylinder engines consisting of four cylinders arranged in a row and adapted to be supplied from one fuel source, comprising a main conduit and four branch conduits in communication therewith, a carbureter branch connected to substantially the central portion of the main conduit, said main conduit having its central portion off-set in a direction toward the outlet of the said branches a distance approximately one-half the diameter of said main conduit, the line of division between the main conduit and the branches for the second and third cylinders being substantially on the extended center line of said off-set central portion of the main conduit, said line of division being adapted to give substantially equal qualitative distribution of fuel to all the cylinders.

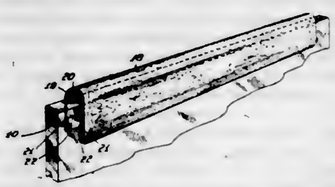
1,375,911. BACKBAND-HOOK. ARTHUR A. HOPSON, Tiptonville, Tenn. Filed May 20, 1920. Serial No. 382,871. 2 Claims. (Cl. 54—55.)

1. An improved back band hook composed of sheet metal and comprising a base plate having a reduced hook at one end, a keeper for the hook, a casing bent out of the plane of said base plate and adapted to receive the back band in a looped condition, and a wedge bar adapted to be driven endwise through the casing and through the looped back band and constructed and arranged to bind the latter against the walls of the casing, substantially as described.



1,375,912. COMBINATION DUPLICATE OR SINGLE CANE OR STICK. JOHN T. HUDDLE, Washington, D. C. Filed Mar. 10, 1921. Serial No. 451,419. 3 Claims. (Cl. 135—45.)

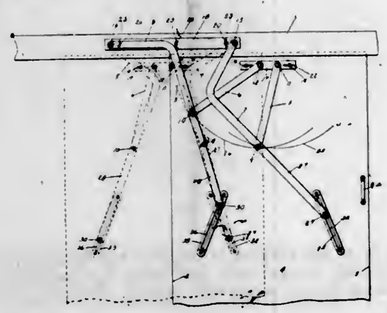
2. A combination duplicate or single cane or stick comprising an inner stick having a straight section and a curved gripping end formed in the arc of a circle, an outer hollow straight stick adapted to surround and receive the straight section of the inner stick, a curved hollow handle having a bore of the same curvature, diameter and length as the curved gripping end of the



inner stick and adapted to slip over and snugly surround said curved gripping end, and means for connecting one end of the hollow handle with one end of the outer hollow stick.

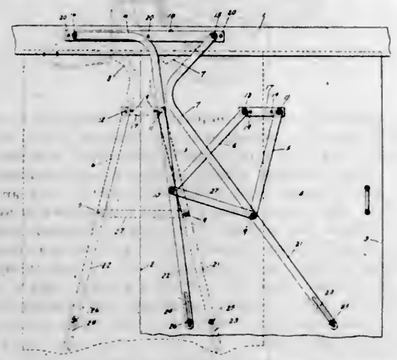
1,375,913. STEAM WASHING-MACHINE. JOHN KASHINSKY, Hoboken, N. J., assignor to New Jersey Can Company, Weehawken, N. J., a Corporation of New Jersey. Filed July 28, 1919. Serial No. 313,748. 1 Claim. (Cl. 68—18.)

A washing machine comprising a receptacle; a perforated horizontally arranged drum disposed within the receptacle and inclusive of an intermediate annular portion, an end member rigidly secured to said annular portion and a hinged end member carried by said annular portion, said drum being provided with means for locking said hinged end member; trunnions extending radially from opposite sides of said annular portion and rotatably passing through said receptacle, one of said trunnions being provided with an operating handle; and a cover applied to said receptacle, the hinged end member of said drum being adapted to rest upon the upper end of said receptacle when open.



1,375,914. PROTECTING-STRIP FOR GLASS WINDOWS OR THE LIKE. EUGENE U. KIMBARK, Evanston, Ill. Filed Mar. 20, 1920. Serial No. 367,304. 4 Claims. (Cl. 20—40.)

1. A protecting strip of the class described adapted to fit over the exposed edge of a glass window pane comprising



a metal strip U-shaped in cross-section and having a flexible covering material on the exterior thereof which extends partially into the interior thereby to increase the friction of said strip on the glass.

1,375,915. SLIDING-DOOR HANGER. ANDREW F. LARSON, Portland, Oreg., assignor to The Gravity Door Hanger Company, a Corporation of Oregon. Filed July 25, 1917. Serial No. 182,620. 11 Claims. (Cl. 16—156.)

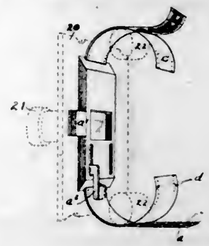
1. A sliding door supporting device, comprising two long levers pivotally connected at one end to a framing, two short levers pivotally connected at one end to the opposite sides of the vertical center of the door, and at their opposite ends to intermediate portions of the first mentioned levers, and guiding means for the free ends of each of the said first mentioned levers.

1,375,916. SLIDING-DOOR HANGER. ANDREW F. LARSON, Portland, Oreg., assignor to The Gravity Door Hanger Company, a Corporation of Oregon. Filed July 25, 1917. Serial No. 182,621. 5 Claims. (Cl. 16—156.)

1. The combination with a door and its supporting frame piece, of two pairs of reflexed door supporting members of unequal lengths, the two members of each pair being pivotally united at their points of reflexion, the free ends of the short members being pivotally connected to the door on opposite sides of the vertical center thereof, the corresponding ends of the long members being pivotally connected to the framing, guiding means for the opposite ends of the long members, and a transversely extending link pivotally connecting the pairs of members at their respective points of reflexion.

1,375,917. NURSING-BOTTLE. LOUIE T. LA PAUGH, Utica, N. Y., assignor of one-fourth to Joseph W. Shea and one-fourth to Elizabeth C. Shea, Utica, N. Y. Filed Feb. 25, 1920. Serial No. 361,094. 5 Claims. (Cl. 248—65.)

1. In a device of the class described, the combination of a tape supported in substantially horizontal position, a nursing bottle, means on said bottle for adjustably holding the same in direct contact with said tape whereby said bottle may be held in predetermined position at any point between the ends of said tape.



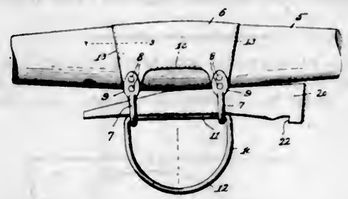
2. In a device of the class described, the combination of a tape supported in substantially horizontal position, a nursing bottle, means connecting said bottle and tape for adjustably holding a portion of said tape in peripheral contact with said bottle, whereby said bottle may be held in predetermined position at any point between the ends of said tape.

3. In a device of the class described comprising in combination a nursing bottle having circumferentially disposed members forming band retaining guides, a substantially horizontally disposed band passing through said guides and about the intermediate periphery of said bottle whereby said bottle may be held in predetermined position on said band.

4. In a device of the class described, the combination of a flexible tape adapted to be supported in substantially horizontal position, a nursing bottle, means on said bottle connected to said tape for adjustably holding the bottle in direct contact with said tape for normally supporting said bottle in inclined position with the nipple uppermost, said means permitting said bottle to be held in predetermined position at any point between the ends thereof.

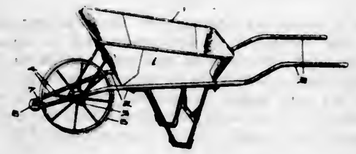
5. In a nursing bottle, oppositely disposed members formed integral therewith, a space formed between said members and the adjacent surface of said bottle, openings through said members, and a tape adapted to be inserted through said openings, whereby the bottle may be held in suspended position.

1,375,918. METHOD OF MAKING ANIMATED-CARTOON MOTION-PICTURE FILMS. CARL F. LEDERER, Rochester, N. Y., assignor to G. Willard Rich, trustee, Rochester, N. Y. Filed June 3, 1918. Serial No. 238,030. 22 Claims. (Cl. 88—16.)



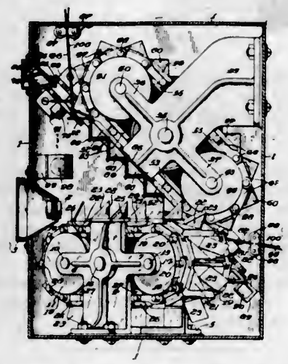
1. The method of making pictures consisting in first preparing two pictures, one in outline, the other silhouetted, then photographing the latter upon a transparent support and developing said photograph, to obtain a stencil of the picture and subsequently photographing the outline picture through said stencil.

1,375,919. METHOD OF DYEING. AUGUST LENDLE, Forest Hills, N. Y., assignor to Kuttroff Pickhardt & Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 9, 1920. Serial No. 409,247. 3 Claims. (Cl. 8—5.)



3. The method of dyeing consisting of dyeing fabric with a basic color, and subsequently subjecting the same to treatment with a complex acid containing phosphorus and tungsten.

1,375,920. NECK-YOKE CENTER. JOHN N. LINDQUIST, Marquette, Mich. Filed Apr. 13, 1920. Serial No. 373,491. 4 Claims. (Cl. 278—121.)

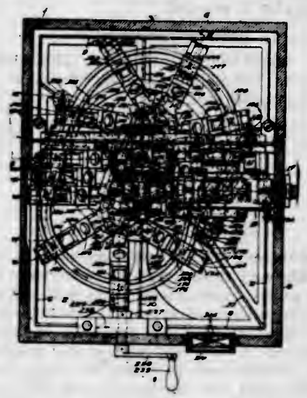


1. In a neck-yoke, a center embodying a collar partially surrounding the yoke arm and embedded therein throughout its area by pressure, transverse loops connecting opposite corners of said collar, and a pole-ring suspended from said transverse loops and provided with a straight bar extending from one loop to the other.

1,375,921. WHEELBARROW-REINFORCEMENT. HENRY J. LUSCHEN, Toledo, Ohio, assignor to The United States Malleable Iron Co., Toledo, Ohio, a Corporation of Ohio. Filed Mar. 20, 1920. Serial No. 367,349. 1 Claim. (Cl. 280—52.)

The combination with a pipe frame wheelbarrow, said barrow having a wheel, a hopper, and a frame provided with a return bend on the side of the wheel away from the hopper, of a reinforcement member of U-shape, channeled on the inner side to seat about the bend of the frame, said member being provided with integral lugs bendable into frame engaging position to mount the member on the outer side of the bend of the frame.

1,375,922. OPTICAL APPARATUS AND METHOD OF USING THE SAME. EDMOND H. LYSLE, New York, N. Y. Filed Nov. 27, 1914. Serial No. 874,152. 45 Claims. (Cl. 88—16.8.)

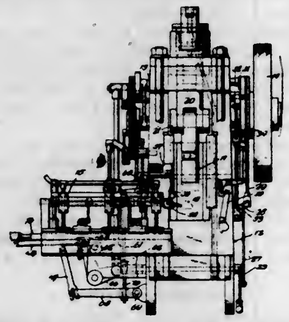


1. In an optical apparatus, the combination with a fixed lens system, a series of reflectors, and a continuous film, of means to move said series of reflectors continuously across the principal axis of said lens system and at an angle of 45 degrees thereto, and means to move said film continuously in the same general direction as that in and at the same linear speed as that at which said series of reflectors is moved but in a line intersecting the principal axis of the lens at an angle and in a plane normal to the plane coincident with the principal axis of the lens and the line of travel of said reflectors.

18. In an optical apparatus, a film carrier having a stepped series of operative surfaces arranged in parallel planes, and means to cause a continuous photographic medium to conform to said surfaces, a fixed lens system, and means for continuously moving said carrier through the field of said lens.

36. In a continuous motion picture machine, the combination of an objective, a record carrying a series of impressions or pictures, means to move said record continuously through the field of said objective, reflecting means to transmit said pictures to said objective and thence to a fixed focused position, and means to carry said reflecting means with and across said record in a diagonal line.

1,375,923. OPTICAL DEVICE. EDMOND H. LYSLE, New York, N. Y. Filed Jan. 22, 1916. Serial No. 73,642. 16 Claims. (Cl. 88—16.8.)



1. In an optical apparatus, the combination with a lens system for directing rays of light in a fixed direction, of a continuously movable photographic medium and compensating means to maintain successive portions of said medium consecutively in optically stationary relationship to said lens system while said medium is moving, said compensating means comprising a reflecting element continuously movable to change the direction of rays of light from a direction normal to said medium to a second direction, and a reflecting element continuously movable with respect to said first mentioned element to change the direction of rays of light from said second direction to a third direction and to change the direction of said rays of light from said third direction to said fixed direction.

9. In an optical apparatus, the combination with means for directing rays of light in a given path, of means for moving successive portions of an image strip consecutively through a given plane and in a given direction, and compensating means to maintain said successive portions consecutively in optically stationary relationship to said first mentioned means as said portions are moved consecutively through said plane, said compensating means including an element arranged to be moved in a plane parallel to said first mentioned plane and in a direction extending obliquely with respect to said strip.

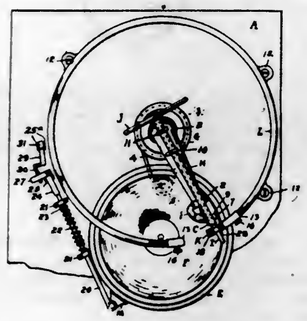
1,375,924. AUTOMATIC DIE-PRESS. CHARLES D. MCDONALD, Chicago, Ill. Filed July 9, 1918. Serial No. 244,041. 4 Claims. (Cl. 192—116.)

1. In a die-press having automatic power driven feed, die and ejector mechanism, and having a main operating shaft and a clutch mechanism for driving said shaft, the combination with said shaft, of a brake, clutch actuating

mechanism, and brake actuating mechanism, overload connections between all of said automatic devices, and said brake and clutch mechanisms for actuating said mecha-

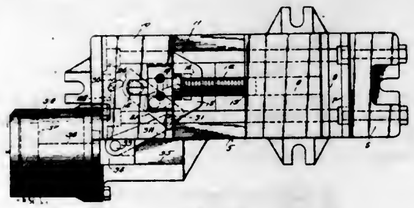
nisms, the arrangement being such that the brake will be set before the clutch is released and will be opened before the clutch is engaged.

1,375,925. FLUE-BLOCK. JOHN J. MCKEONE, Washington, Iowa. Filed Aug. 2, 1920. Serial No. 400,816. 1 Claim. (Cl. 108—26.)



The combination with a block provided in the outer face of a side wall thereof with a transversely extending horizontal groove, said groove being enlarged as to its inner portion, of a flashing member comprising a body portion provided at its upper end with an angular extension adapted to enter said groove, said angular extension being provided upon its inner end with a hollow roll of larger size than said groove and adapted to enter the enlargement of said groove, said roll being provided with a longitudinally extending opening communicating with the center thereof, thereby permitting the insertion therein of a packing medium, said roll preventing removal of said flashing through said groove.

1,375,926. SPARK-PLUG. JOHN WM. NELSON, Norwood, Mass. Filed Mar. 19, 1919. Serial No. 283,463. 1 Claim. (Cl. 123—169.)

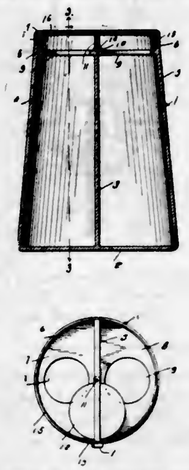


A spark plug comprising a body, a sleeve detachably secured in said body and projecting beyond the outer end thereof, an insulator extending through the sleeve into the body and terminating in substantially the same plane with the inner end of said body and fully closing the inner end of the body, the outer end of the insulator projects a short distance beyond the outer end of the sleeve, an annular shoulder formed on the insulator adjacent its outer end and engaged by the outer end of the sleeve, a cap threaded on said sleeve and engaging the flange for detachably securing the insulator in the body and sleeve, a central electrode extending through the insulator, a second electrode embedded in said insulator and having one end spaced from the central electrode to form a spark gap and its other end extending through the side face of the insulator and disposed angularly and against the sleeve.

1,375,927. REPEATING-PHONOGRAPH MECHANISM. JOSEPH M. NOEL, Portage borough, Pa. Filed Jan. 2, 1920. Serial No. 348,870. 8 Claims. (Cl. 274—15.)

1. In a repeating phonograph, the combination of a sound arm rotatable on a vertical axis, a sound box mounted on the free end of said arm and movable on a horizontal axis, a sound groove engaging member mounted on said box, and means for rotating said sound arm with the sound box in an elevated position, said means including a part interrupted over the playing path of the sound box.

1,375,928. VISE. JOHN A. OLSON, Chicago, Ill. Filed Sept. 20, 1919. Serial No. 325,244. 5 Claims. (Cl. 90—60.)

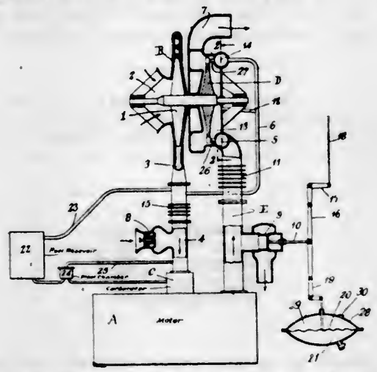


1. In a machine vise, the combination of a body portion having a fixed jaw, a slidable jaw mounted on said body, a slide mounted on said body adjacent to the slidable jaw, adjusting means between the slide and slidable jaw, a lever having a movable pivot connection with the body, an arm pivoted to said lever and engaging with the slide, an arm pivotally mounted in the body adjacent to the pivoted end of said lever and adapted to engage with the corresponding end of the lever to form a toggle when the elver has reached a predetermined position, and means for actuating said lever, the arrangement being such that when the lever approaches alinement with the center of the body, the arms will co-act with the lever to force the slide forwardly.

1,375,929. CONDIMENT-HOLDER. SHAFEH PETERS, Paris, Tex., assignor of one-half to Constantine M. Haddad, Tyler, Tex. Filed Jan. 23, 1919. Serial No. 272,754. 1 Claim. (Cl. 65—45.)

A condiment holder comprising a body having its upper end open and screw threaded, a partition formed in said

body to provide a pair of main compartments and said partition terminating in a plane with the upper edge of said body, horizontal partitions formed on the first named partition and wall of said body to provide auxiliary compartments and said horizontal partitions having openings to communicate the main and auxiliary compartments, a perforated cover threaded to the upper end of

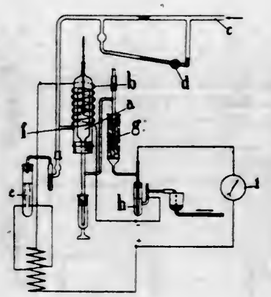


said body and bearing against the upper end of the first named partition, said first named partition and body each having a slot above the horizontal partitions, and a closure element pivoted in the slot of the first named partition and extending through the slot of the body so that the same can be moved from one auxiliary compartment to the other for closing and opening the openings between the main and auxiliary compartments.

1,375,930. PROCESS OF TREATING BRASS SCRAP. OLIVER C. RALSTON, Niagara Falls, N. Y. Filed Jan. 2, 1920. Serial No. 348,782. 3 Claims. (Cl. 75—18.)

1. Process of treating copper-bearing alloys comprising reacting thereon with an aqueous solution containing a solvent for metals electropositive to copper, thereby progressively increasing the copper content of the undissolved residue, and arresting the reaction when the desired copper content in said residue is attained.

1,375,931. PERTAINING TO INTERNAL-COMBUSTION AIRCRAFT-MOTORS. AUGUSTE CAMILLE EDMOND RATEAU, Paris, France. Filed Nov. 6, 1917. Serial No. 200,514. 21 Claims. (Cl. 60—13.)



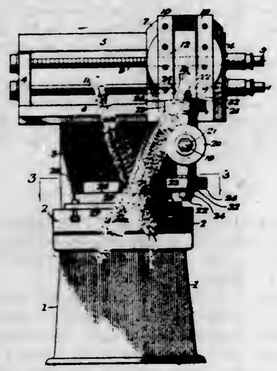
1. The method of compensating for changes in atmospheric pressure resulting from changes in altitude in the charge forming operation of an internal combustion aircraft motor, which consists in expanding the exhaust motor gases into the atmosphere to thereby develop kinetic energy in amount increasing as the atmospheric pressure decreases and employing this energy in compressing atmospheric air and delivering it to the air inlet of the motor at a pressure exceeding that of the atmosphere at the aircraft altitude.

21. In a combustion motor, a turbine adapted to be driven by the exhaust gases from the motor, means whereby said gases may be discharged without driving the turbine, an air compressor driven by the turbine and means for cooling the turbine.

1,375,932. PURIFICATION OF HYDROGEN. EAIC KEIGHTLEY RIDEAL, London, and HUGH STOTT TAYLOR, St. Helens, England. Filed Feb. 11, 1919. Serial No. 276,373. 4 Claims. (Cl. 183—116.)

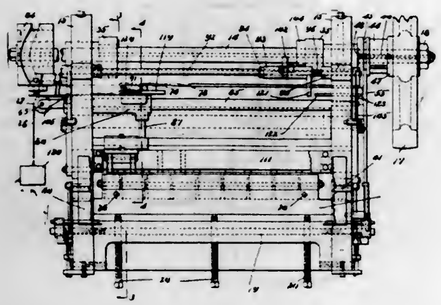
1. A process of purifying hydrogen containing carbon monoxid as an impurity which comprises adding steam to such hydrogen, passing the mixture in contact with a catalyst at such a temperature as to convert the major part of the carbon monoxid into carbon dioxid, then adding an oxygen-containing gas and passing the mixture in contact with a catalyst at a temperature at which oxygen will combine with carbon monoxid in preference to hydrogen.

1,375,933. APPARATUS AND PROCESS FOR GAS ANALYSIS. ERIC KEIGHTLEY RIDEAL and HUGH S. TAYLOR, London, England. Filed Mar. 5, 1919. Serial No. 280,774. 5 Claims. (Cl. 23—3.)



1. A process of analyzing gases, which comprises passing the gas being tested, in contact with another substance capable of reacting thereupon, in contact with a catalyst capable of inducing reaction between such gas being tested and such other substance, bringing the gas containing the reaction product into contact with an absorbent of which the electrical conductivity will be varied by an amount dependent upon the amount of such reaction product, passing an electric current of known voltage through the said absorbent, and comparing the amperage of the current with that which would be produced by passing a current of like voltage under like conditions through the untreated absorbent.

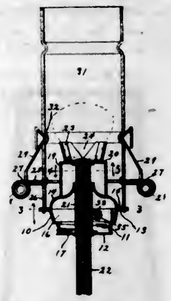
1,375,934. ANGLE-BENDING MACHINE. SAMUEL D. RONALD, San Francisco, Calif., assignor to Bethlehem Shipbuilding Corporation, Ltd., Bethlehem, Pa., a Corporation of Delaware. Filed Dec. 4, 1918. Serial No. 265,199. 3 Claims. (Cl. 153—56.)



1. In a bending machine, a rotary table, a bending die thereon, a slide supported above said die, means for adjusting said slide vertically and horizontally, a shaft project-

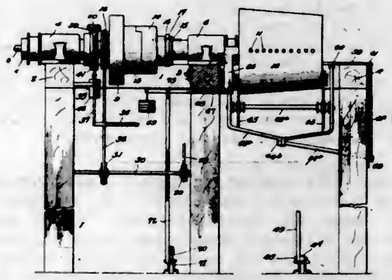
ing laterally from said slide, a tool head rotatably mounted on said shaft, bending rolls rotatably mounted on the ends

of said head, and means on said tool head shaft for effecting the locking of said tool head and the rollers thereon in the desired position.



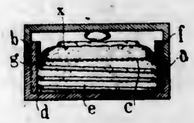
1,375,935. LEATHER-WORKING MACHINE. CHARLES ADRIAN SAWYER, Jr., Newton, Mass. Filed May 8, 1920. Serial No. 379,731. 3 Claims. (Cl. 164—24.)

1. In a leather working machine, the combination of a frame, a pair of cutters mounted for reciprocating and sliding movement therein, a rotatable shaft, means operated thereby for causing a reciprocating and sliding movement of the pair of cutters, a source of power and a combined operating and guard plate slidable with respect to said frame and operating to connect said shaft with the source of power, whereby an intermittent reciprocating and sliding movement is imparted to said cutters and the operator is simultaneously guarded from injury by the cutters.



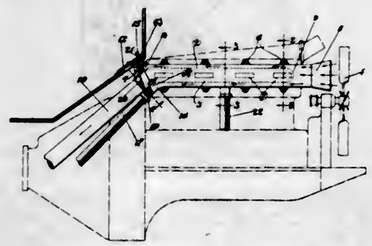
1,375,936. LAMP-BURNER. DAVID H. SCHROEDER, Slater, Iowa. Filed Jan. 12, 1920. Serial No. 350,942. 5 Claims. (Cl. 67—53.)

2. A lamp burner, comprising a casing forming a lower air chamber, a cylindrical casing mounted on the first casing and providing an upper air chamber, a wick tube mounted through the lower chamber and communicating with the upper chamber, and a shield mounted on the upper casing, the top of the upper casing being spaced above the wick tube and formed with an aperture opening to said shield and in alinement with said wick tube, said upper casing being wholly imperforate except for the



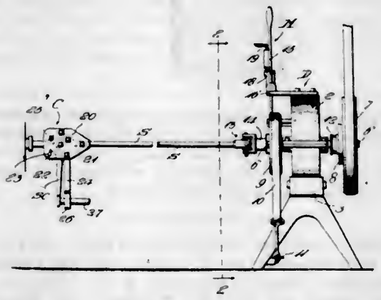
wick openings, whereby a dead-air space is provided around the upper portion of the wick when said wick is in place, said wick passing uninclosed through said dead-air space.

1,375,937. APPARATUS FOR FORMING BUCKET-BODIES. ALEXANDER H. SEARLE and OSCAR DURYEA, Brooklyn, N. Y. Filed June 22, 1920. Serial No. 390,953. 9 Claims. (Cl. 93—39.)



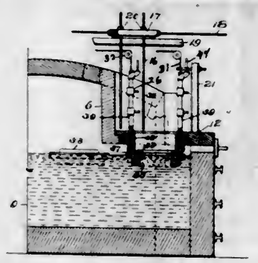
1. The combination of a mandrel, a shaft carrying the mandrel, a driving pulley loose on the shaft, a clutch slidable on the shaft but constrained to rotate therewith and adapted to engage the driving pulley, said clutch being provided with a longitudinal peripheral recess opening through its end remote from the driving pulley, means for shifting the clutch, and a fixed member bearing against the end of the clutch and preventing endwise movement of the same except when the recess is alined with said member and the mandrel is in a predetermined position.

1,375,938. BOX OR RECEPTACLE FOR FACE-POWDER. HARRY FRANK SLACK, Hove, England, assignor to Stanley Septimus Booty, Ealing, London, England. Filed May 31, 1919. Serial No. 301,134. 9 Claims. (Cl. 132—82.)



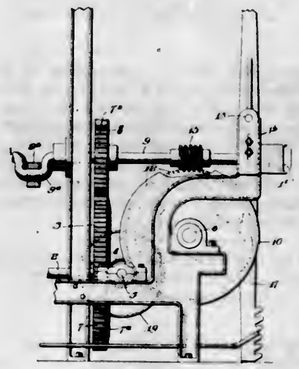
8. A receptacle for face powder comprising a box, a lid therefor, a sieve within the box, means associated with the sieve adapted to prevent the leakage of powder between the edge thereof and the wall of the box, a puff device between the sieve and the lid, said puff device being dimensioned to cover the open portion of the sieve, resilient means adapted to force the sieve against the puff and the puff against the lid to prevent undesired discharge of powder through said sieve, and means adapted to limit the motion of the sieve in an upward direction.

1,375,939. AUTOMOBILE-HEATING DEVICE. WILLIAM J. SLINGER, St. Louis, Mo. Filed Aug. 16, 1920. Serial No. 403,697. 4 Claims. (Cl. 237—12.3.)



1. The combination with an automobile motor, of a casting including an exhaust manifold, a jacket cast integral with and inclosing the exhaust manifold and spaced therefrom leaving a space within the jacket and around the manifold, flat portions on the jacket bearing flat against the motor, passages from the manifold through said flat portions and out of communication with the spaces between the manifold and the jacket, a passage from the rear end of the jacket for discharging air from said space in proximity to the seating portion of the automobile, and a passage from the rear end of the jacket for discharging the air from said space in a direction away from the seating portion of the automobile.

1,375,940. MOTOR-CRANKING DEVICE. WALTER BERTON SMITH, Sioux City, Iowa, assignor to Smith-Foote Co., Sioux City, Iowa, a Corporation. Filed Feb. 13, 1919. Serial No. 276,825. 2 Claims. (Cl. 74—7.)

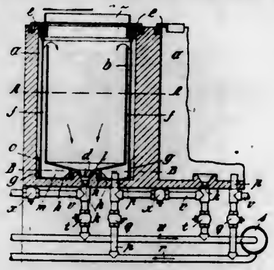


1. In a motor-spinning device for automobile motors, a shaft and means for driving it by power, both said shaft and said driving means being relatively stationary with respect to the automobile, a pair of plates secured to opposite sides of said shaft, at one end thereof, and adapted to straddle the angle of the crank, and a bar secured at one end between said plates and shaped for contact with said angle to prevent lateral movement of the shaft in one direction, and means to prevent such movement in the other direction, the aforesaid bar extending laterally and being adapted to engage an off-center part of the crank.

1,375,941. GLASS-TANK. ARTHUR E. SPINASSE, Mount Vernon, Ohio. Filed Mar. 31, 1917. Serial No. 158,968. 18 Claims. (Cl. 49—56.)

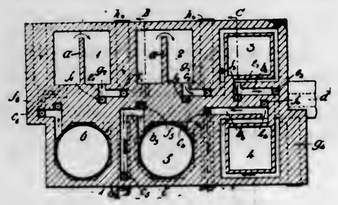
11. In a glass drawing tank, in combination, a drawing station, a floating drawing ring, a flange projecting up from the top of said drawing ring, and a water-cooled ring-holding means adapted to engage said ring on its top without the flange to hold it in drawing position while the flange protects the glass within the ring from the chilling effect of said water-cooled ring-holding means.

1,375,942. DRIVING MECHANISM FOR LOOMS. JAMES H. STAIRS, Philadelphia, Pa., assignor to Home-Crest Mills Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 6, 1920. Serial No. 379,208. 4 Claims. (Cl. 139—18.)



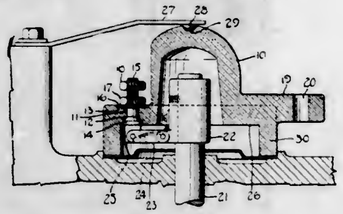
1. The combination in a loom comprising a power shaft and a series of harness lever operating cams, a driven main shaft, connecting actuating gearing between said shafts, a lay operating shaft carrying a worm gear, connecting actuating gearing between said last mentioned shaft and said driven main shaft, a shaft on which said cams are fixedly mounted, and a worm wheel on said cam shaft meshing with said worm gear to directly operate said cam shaft.

1,375,943. FURNACE SYSTEM FOR DRY DISTILLATION. THOM MELCHER UNGNEN VON POST, Stäket, Sweden. Filed Oct. 16, 1919. Serial No. 331,214. 7 Claims. (Cl. 202—9.)



1. In a furnace system for dry distillation, a closed chamber, a retort removably located in said chamber and provided with a conduit communicating with an inlet at the bottom of said chamber and adapted for leading gases from said inlet into the retort at the top of the same, the retort being also at its bottom provided with an outlet, communicating with an outlet pipe opening into

the bottom of said chamber, means at the bottom of the chamber by which the outlet and the inlet at the bottom



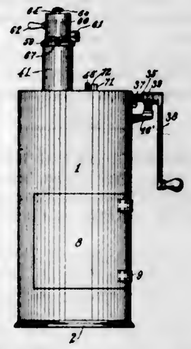
of said chamber are gas-tightly separated from each other, and a condenser communicating with said inlet and outlet.

1,375,944. CARBONIZING-FURNACE. THOM MELCHER UNGERN VON POST, Stäket, Sweden. Filed Oct. 16, 1919. Serial No. 331,215. 4 Claims. (Cl. 202—9.)

1. A carbonizing furnace, comprising a plurality of retort chambers arranged in series in two rows, a smoke flue between said rows, each of said chambers communicating by means of a damper-controlled conduit with said smoke flue and with the immediately succeeding chamber, a hearth conduit for each chamber, one located between each pair of adjacent chambers, and closable from without, said chambers being also in communication with their respective hearth conduits.

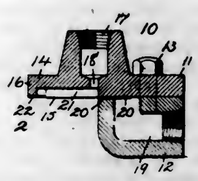
1,375,945. COMMUTATOR. CLARENCE H. WALKER, Larchmont, N. Y. Filed Oct. 30, 1919. Serial No. 334,424. 1 Claim. (Cl. 200—19.)

An ignition commutator for internal combustion motors, comprising a contact member carrying shell of ready molded porcelain, and metallic contact members secured in place therein, the race for the rotating member of the commutator being of porcelain and integral with the material of the shell, whereby the shell serves as its own insulator and the race is substantially as wear resisting as the metallic contact members.



1,375,946. SAFETY-SWITCH. HERBERT P. WHITE, Philadelphia, Pa. Filed Apr. 21, 1920. Serial No. 375,512. 6 Claims. (Cl. 200—3.)

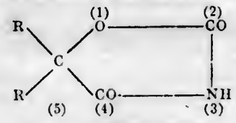
5. In a device of the character stated, in combination with a casing,—a carrying plate through which a driving shaft extends and which is provided with an upper handle stop and a lower handle stop,—an operating handle exterior of the casing, fixed on the driving shaft,—a driving shaft housed in a bearing in the casing and carrying plates,—an operating handle provided with an abutment



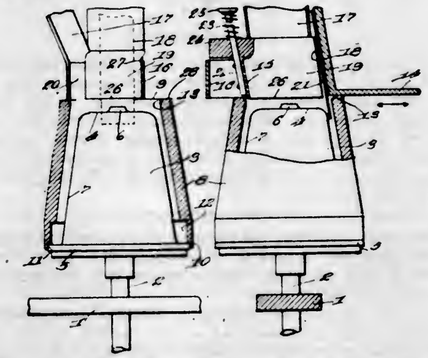
stop,—a swinging dog formed with a stop shoulder having a contact face and with a pawl stop,—a pawl pivoted to said dog, formed with a pawl shoulder and controlling the dog with relation to its bearing,—and a stop for the pawl.

1,375,947. DISPENSING-MACHINE. HARRY W. WILLIAMS, Dayton, Ohio, assignor to The Superior Tool Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 8, 1920. Serial No. 363,940. 11 Claims. (Cl. 221—102.)

1. In a machine of the character specified, a rotatable platform adapted to support a container from which material is discharged, and a gear pump engaging said material in the mouth of the container to remove the same as the container rotates with the platform.



1,375,948. BURNER FOR FLUID FUEL. AMYUIT L. WILSON, Elizabeth, N. J., assignor to The Petroleum Combustion Company, Elizabeth, N. J. Filed Oct. 29, 1919. Serial No. 334,173. 7 Claims. (Cl. 158—78.)



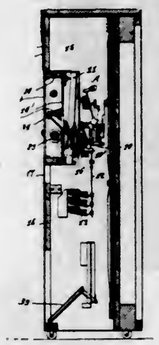
1. A burner for fluid fuel comprising a casing having a chamber with an open bottom, said chamber having a restricted supply orifice, and means for projecting a film of fluid under pressure across the bottom of said chamber, whereby said film supports liquid in said chamber and carries a quantity from the bottom thereof.

1,375,949. PROCESS FOR THE PREPARATION OF TWICE-SUBSTITUTED 2-4-DIKETO-TETRAHYDRO-OXAZOLS. JEAN ALTWEGG and DAVID EBIN, Lyon, France, assignors to Societe Chimique Des Usines Du Rhone, (anciennement Gilliard P. Mennet et Cartier), Paris, France. Filed July 8, 1920. Serial No. 394,606. 4 Claims. (Cl. 23—24.)

4. The in position 5 twice substituted derivatives of 2-4-diketo-tetra-hydro-oxazol having the formula

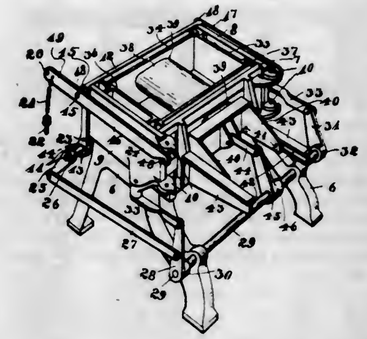
1,375,950. METHOD AND APPARATUS OF FORMING CONCRETE POTS. CLAUDE G. BEWLEY, Spokane, Wash., assignor to Spokane Concrete Flower Pot Machine Co. Inc., a Corporation of Washington. Filed Mar. 15, 1920. Serial No. 365,732. 19 Claims. (Cl. 25—27.)

1. In a machine for molding concrete or like pots in an inverted position, inverted male and female mold members rotatable in unison, mechanism for delivering the material between said members, means for forming the wall of the pot while said members are rotating, and means for forming the bottom of the pot.



1,375,951. EMBROIDERY. FRANCOIS CROZET, Condrieu, France. Filed Dec. 29, 1917. Serial No. 209,472. 5 Claims. (Cl. 112—266.)

1. A stitch or seam applied to a fabric and comprising a core, a lacing thread wound spirally therearound, and a stitching thread disposed entirely at the back of the fabric and formed with loops with which the lacing thread is engaged at each turn.

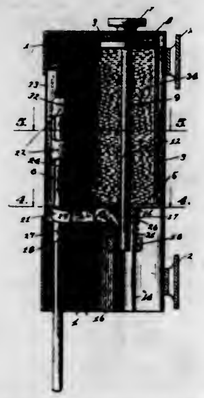


1,375,952. MUSICAL INSTRUMENT. GOTTFRIED DANIELSON, Weehawken, N. J. Filed Feb. 12, 1920. Serial No. 358,228. 10 Claims. (Cl. 84—30.)

1. In a musical instrument adapted for manual or mechanical operation as desired, an action, a mechanical device for operating said action, comprising a relatively fixed section for engaging said action, and complementary section movable into and out of operative relation to the first-named section, and means for operating the action manually, said means being connected to move in unison

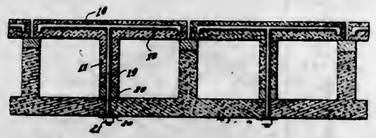
with said movable section of the mechanical playing device in such a manner as to bring the said manual means into operative position when the movable section of the mechanical playing device is moved out of operative position, and vice versa.

1,375,953. CONCRETE-BLOCK-MAKING MACHINE. ANTONY DE CICILIANI, Los Angeles, Calif. Filed Nov. 27, 1920. Serial No. 426,832. 7 Claims. (Cl. 25—41.)



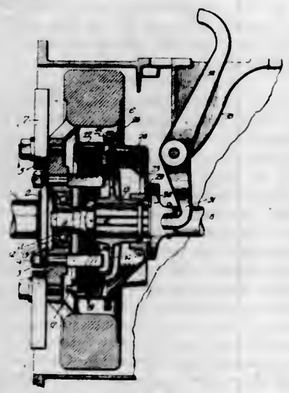
1. In a block-making machine, in combination with opening doors, a lever mounted on one of the doors having means for engaging the lever to the door so as to use the hinge of the door for the operating pivot of the lever in operating the device.

1,375,954. DENTIFRICE-DISPENSING DEVICE. CHARLES DOYLE, San Francisco, Calif. Filed Jan. 28, 1921. Serial No. 440,792. 15 Claims. (Cl. 132—84.)



15. A tooth paste dispensing device comprising a housing adapted for mounting upon a wall, said housing being open at one end thereof; a receptacle provided with a dispensing vent removably mounted within said housing; tooth brush engaging means slidably mounted within the housing adjacent the receptacle to receive and hold a tooth brush adjacent said vent; a plunger mounted within the receptacle; a stem secured to the plunger and extending outwardly beyond the receptacle; ratchet teeth formed upon said stem; and a pawl operatively mounted upon the brush engaging means and arranged to engage the ratchet teeth for operating the plunger to dispense tooth paste to the brush when said brush is withdrawn from the brush engaging means; and adjustable means for limiting the movement of the brush engaging means when the brush is being withdrawn therefrom to regulate the quantity of paste dispensed upon said brush; and means connected

to the brush engaging means for normally closing the dispensing vent, and to open said vent when said brush engaging means is operated by the withdrawal of the

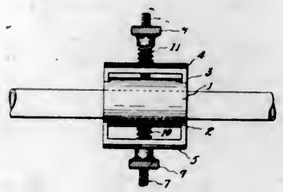


brush therefrom to dispense paste from the receptacle; and means for returning the brush engaging means to its normal position when the brush has been removed therefrom.

1,375,955. BUILDING CONSTRUCTION. LEONARD L. ELDRIDGE, Dallas, Tex. Filed Apr. 19, 1920. Serial No. 375,027. 2 Claims. (Cl. 72—16.)

1. In a building construction, a hollow wall including a plurality of oppositely arranged slabs formed T-shaped in cross section, T-shaped reinforcing metallic elements embedded in the slabs in one set and extending through the transverse portions thereof and through the other set, and clamping devices carried by the ends of the reinforcing elements and engaging the outer surface of such other set.

1,375,956. CLUTCH. HENRY FORD, Dearborn, Mich. Filed Apr. 15, 1918. Serial No. 228,589. 9 Claims. (Cl. 192—69.)

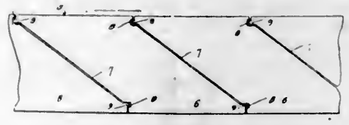


1. The combination of a driven fly wheel, a plurality of clutch plates supported therein, a clutch housing movable in said fly wheel, a plurality of clutch plates carried by said clutch housing adapted to frictionally engage the clutch plates of said fly wheel, and means adapted for shifting said clutch housing.

1,375,957. PROCESS OF CONCENTRATING ORES BY FLOTATION. BARNETT L. GEORGE, Salt Lake City, Utah. Filed Aug. 9, 1918. Serial No. 249,059. 4 Claims. (Cl. 83—85.)

1. The process of concentrating ores, which comprises adding to an ore pulp an oil having an organic acid reaction and a quantity of zinc sulfate, and then subjecting the resulting mixture to a flotation operation.

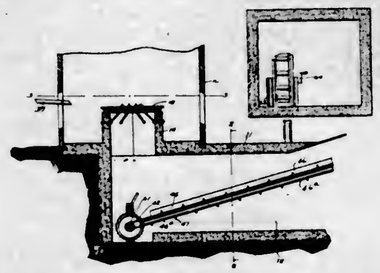
1,375,958. GLASS-CUTTER. OLAF B. GERDIN, Seattle, Wash. Filed Jan. 21, 1920. Serial No. 353,078. 3 Claims. (Cl. 49—52.)



1. A tube cutting device comprising a cylindrical member, adapted to receive and to be revolved about a tube to be cut, guide members adjustably mounted on the said cylindrical member adapted to engage the tube and to retain the said body in parallel relation thereto, cutting disks radially adjustable against the tube and yieldable means for urging said cutting disks against the tube during a cutting operation.

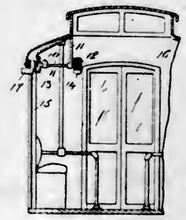
1,375,959. PROCESS OF PRODUCING CONDENSATION PRODUCTS. BYRON B. GOLDSMITH, New York, N. Y. Filed July 28, 1917. Serial No. 183,320. 10 Claims. (Cl. 106—22.)

1. The process of forming a resinous condensation product from a phenol and a body having a reacting methylene group which consists in producing the initial condensation product in solution and applying heat until precipitation takes place.



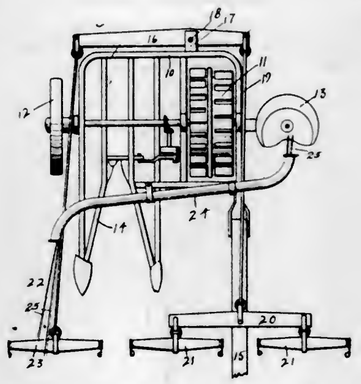
1,375,960. HIGHWAY CONSTRUCTION. HERBERT C. HARRIS, Spokane, Wash. Filed Apr. 15, 1919. Serial No. 290,266. 1 Claim. (Cl. 94—11.)

A paving section in the form of a parallelogram having edge side and end edges at two of its diagonal corners intersecting each other at acuminate angles and its edges at the other two diagonal corners intersecting each other at obtuse angle, the section being provided at the obtuse angle portion with notches and provided at its acuminate corners with tongues, the tongues and notches being located at parallel edge portions of the section.



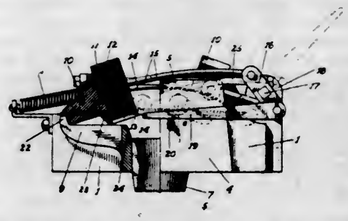
1,375,961. SILO AND ENSILAGE-FEEDING STRUCTURE. LOREN D. HART, Dickens, Iowa. Filed May 8, 1919. Serial No. 295,737. 8 Claims. (Cl. 193—20.)

1. A silo, comprising a silo wall, a wall spaced from said silo wall extending upwardly in the central part of the silo, cover sections for said inner wall structure, pivoted at their outer edges and having portions adapted to



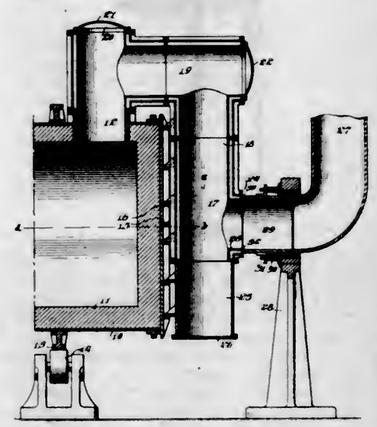
agitate the ensilage when the inner ends of the cover sections are released and dropped downwardly.

1,375,962. INDICATOR. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed July 1, 1919. Serial No. 307,998. 9 Claims. (Cl. 40—60.)



1. In an indicator mechanism for indicating whether doors are open or closed, a tell-tale indicator vane, arranged to be maintained in retracted position when the door is closed, and means extending into the path of the door, for moving said indicator into indicating position when the door is opened.

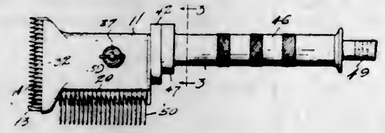
1,375,963. HITCH FOR HARVESTING MACHINERY. MORRIS O. HENDERSON, Story City, Iowa. Filed Jan. 2, 1920. Serial No. 349,040. 1 Claim. (Cl. 56—51.)



The combination of a harvesting machine having a frame, traction wheels, a tongue, gathering members located between and forward with relation to said wheels, a seat, with a draft device comprising an evener bar pivotally connected between its ends, rearwardly of said gathering members, draft members extending forwardly from said evener bar on opposite sides of its pivot, said seat being located near one side of the machine, and a tubular guide member supported on the machine and extending across the machine from a point adjacent to the seat to a point beyond the gathering members and rearwardly from the forward part thereof, whereby one draft animal may be driven between rows of standing corn, and yet the evener bar will not be interfered with by said corn, nor will it interfere with said corn, and whereby lines may be placed in said tubular guide members, where they will not be interfered with by the standing corn or the like.

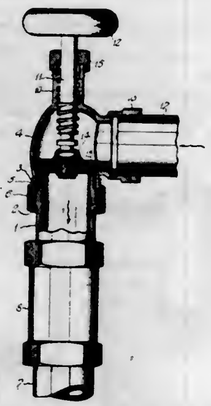
1,375,964. LOCKED-CARRIAGE PIPE-SPIDER. BENJAMIN FRANKLIN HINIKER, Taft, Calif. Filed Aug. 7, 1920. Serial No. 402,009. 11 Claims. (Cl. 255—23.)

1. A device of the character described comprising a table, a pair of carriages slidably mounted therein for movement to and from each other, and semicircular bushings carried by the carriages and arranged to clamp about a pipe when the carriages are moved toward each other.



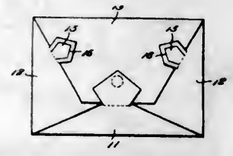
1,375,965. GAS-DISCHARGE CONDUIT FOR ROTARY CONVERTERS. WILLIAM H. HOWARD, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 4, 1919. Serial No. 342,451. 10 Claims. (Cl. 266—36.)

1. A converter for treating molten matte which comprises a horizontal cylindrical shell mounted to rotate on its horizontal axis and having its discharge opening for smoke and gases at the upper portion of the shell, a conduit fixed to one end of the shell and rotatable therewith, said conduit leading from said opening and having a discharge end portion concentrically disposed relative to said axis, and means for receiving the gaseous discharge from the converter, said means having a relatively fixed gas intake member constituting a continuation of said rotating discharge end portion, and having a loose but substantially



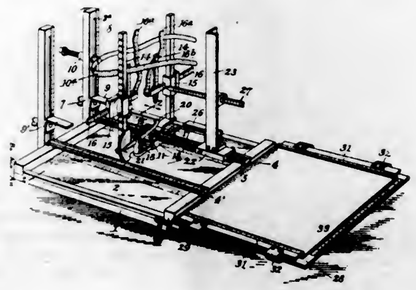
gas-tight connection with said end portion thereby to permit freedom of rotary motion and at the same time avoid leakage at the joint between the rotating end and the fixed intake member.

1,375,966. HAIR-CLIPPER. SIDNEY P. JONES and DAVID P. WALLACE, Waco, Tex. Filed Jan. 14, 1920. Serial No. 351,370. 11 Claims. (Cl. 30—1.)



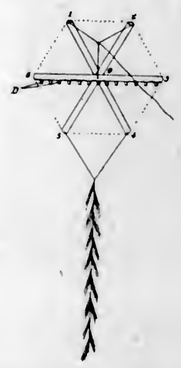
1. In a hair clipping device, a support having a lower longitudinal portion upon which the support is adapted to rock transversely, a pair of longitudinal coacting cutters carried by the support at one side thereof and arranged above the lower longitudinal portion, an upwardly inclined forward portion carried by the support and extending from the lower longitudinal portion to a point above the same, a pair of transverse coacting cutters carried by the inclined forward portion and spaced vertically from the bottom of the lower portion, and means to operate one of the cutters in each pair.

1,375,967. VALVE. CHARLES S. KELLUM, Detroit, Mich., assignor to Commonwealth Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 25, 1918. Serial No. 224,658. 4 Claims. (Cl. 251—156.)



4. As a means for alining the inlet and outlet ports of a valve casing with fitting connections having axes at approximately right angles, and wherein the valve casing carries the valve member having an active closure face, a coupling sleeve adapted to be secured to one of the fitting connections and having its outer periphery extending on two diameters connected by a seating face, said sleeve being insertible within one of the casing ports to locate the portion of less diameter wholly within such casing and spaced from the casing wall, the inner end of the sleeve being adapted to operate as a closure seat, the casing wall at such port being externally threaded and internally smooth, said seating face having a configuration to coöperate with said smooth wall portion to form a closed joint therewith beyond the portion of less diameter, said sleeve also having an annular shoulder beyond the seating face, said valve member being formed to permit shifting of the closure face to compensate for variations in the relation of sleeve and casing at said seating face, and a fitting member coöperating with said shoulder and said threads to couple the sleeve and casing together in such relation, the seating face and the complemental portion of the casing wall being relatively formed to permit relative movement or canting of the inserted portion within the casing.

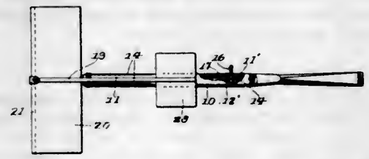
1,375,968. SAFETY-ENVELOP. GIOVANNI LATTANZIO, New York, N. Y. Filed June 29, 1920. Serial No. 392,704. 2 Claims. (Cl. 229—81.)



1. A safety envelop comprising a body portion, a bottom flap, side flaps and a closure flap, a sealing tongue carried by one end of one of the side flaps and adapted to be adhesively secured to the adjacent extremities of the other side flap when these flaps are folded, a plurality of sealing tongues cut from each side flap, the said tongues being arranged one within the other and adapted to be secured on the exterior of the closing flap when the envelop is sealed.

1,375,969. PEDIMETER. CASTAGNOLA OLIVER, Brooklyn, N. Y. Filed Oct. 6, 1919. Serial No. 328,652. 18 Claims. (Cl. 33—3.)

1. A pedimeter comprising in combination means whereby the vertical distance from a base plane may be determined of any given point on a patient's foot when the foot is in the position assumed by it when standing, and means whereby the projection of said point on said plane may be determined.

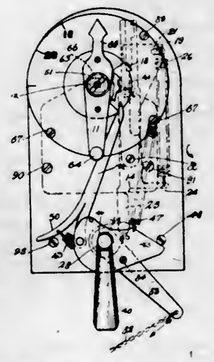


1,375,970. KITE. SOPHOCLES XENOPHONE PANTCHEFF, Buckhurst Hill, England. Filed July 7, 1920. Serial No. 394,425. 11 Claims. (Cl. 244—22.)

1. A kite comprising a frame constituted by a plurality of radiating ribs or spars of any desired cross section,

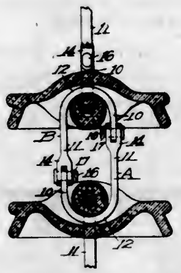
means for securing said ribs or spars in superposition at the center, means for connecting together the peripheral extremities of said ribs or spars approximately in the same plane, a covering for said frame fastened to the periphery of the kite only and constituting a plurality of inclined surfaces symmetrically arranged with respect to the center of the kite, a flying string, means for attaching said flying string to said kite, a tail and means for attaching said tail to said kite.

1,375,971. TOY AEROPLANE-PROJECTILE. ROBERT L. PARRISH, The Dalles, Oreg. Filed Feb. 5, 1921. Serial No. 442,796. 1 Claim. (Cl. 244—14.)



A toy projectile for a catapult gun comprising a frame including a longitudinal strip, a longitudinal block disposed below the forward end portion of the strip and secured thereto, a transverse sustaining plane secured between the strip and block, a reinforcing strip secured to the forward edge of the sustaining plane, a tail plane secured to the rear end of the strip, a weight carried by the forward end of the strip and block, and a staff for reception in the barrel of a catapult gun secured at its forward end portion to the lower side of the block and terminating at its rear end below the forward edge of the tail plane.

1,375,972. MANUFACTURE OF ANTHRANOL. ARTHUR GEORGE PERKIN, Leeds, England, assignor to British Dyestuffs Corporation, Limited, Kingsway, London, England. Filed June 9, 1920. Serial No. 387,730. 4 Claims. (Cl. 23—24.)



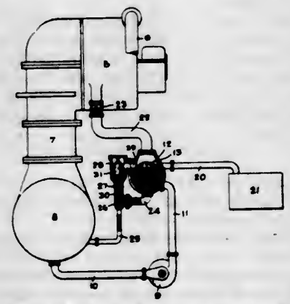
1. Process for the manufacture of anthranol by heating anthraquinone with a solution of a carbohydrate in the presence of caustic alkali.

1,375,973. TIMING DEVICE. ROSS M. G. PHILLIPS, New Haven, Conn., assignor to The Phillips Time Switch Co., Shelton, Conn., a Corporation. Filed Aug. 19, 1918. Serial No. 250,437. 8 Claims. (Cl. 161—7.)

1. In a timing device, the combination with the arbor of a time movement, of a cam operated thereby, a cocking link arranged in the path of said cam, said link formed with a shoulder near its upper end and with a finger near its lower end, a stud with which said shoulder will engage, and a spring tending to raise the link and throw it into engagement with the said stud.

1,375,974. INSULATOR-CONNECTOR. HENRY T. PIERCE and ANGUS D. MCPHEE, Worcester, Mass., assignors to General Electric Company, a Corporation of New York. Filed Feb. 11, 1918. Serial No. 216,453. 6 Claims. (Cl. 173—318.)

6. An insulator connector having, in combination, two duplicate pieces each comprising longer and shorter end portions joined by a substantially semi-circular intermediate portion, and means to connect said pieces to each other in reversed position, said end portions being perforated and each longer end portion being forked, and said means comprising studs extending transversely through said perforations, said perforations being elongated longitudinally of said members, and said studs having similarly elongated cross-sections.



1,375,975. MANUFACTURE OF SUBSTANCES PRECIPITATING GLUE. ADOLF RÖMER, Stuttgart, Germany, assignor, by mesne assignments, to Adolf Kuttroff, New York, N. Y. Filed Nov. 28, 1914, Serial No. 874,540. Renewed Apr. 24, 1920. Serial No. 376,429. 13 Claims. (Cl. 23—24.)

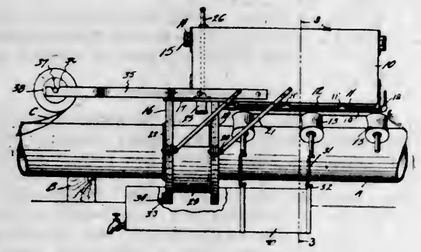
1. A process of making tanning substances which comprises heating a naphthol-sulfonic acid to effect the formation of a new product which is capable of strongly precipitating glue.

1,375,976. MANUFACTURE OF SUBSTANCES PRECIPITATING GLUE. ADOLF RÖMER, Stuttgart, Germany, assignor to Adolf Kuttroff, New York, N. Y. Filed May 9, 1917, Serial No. 167,561. Renewed June 29, 1920. Serial No. 392,772. 1 Claim. (Cl. 23—24.)

The process of producing new water-soluble products which are capable of precipitating glue from its solutions, which comprises treating, with a sulfonating agent, a naphthalene sulfone and acting upon the product with formaldehyde.

1,375,977. APPARATUS FOR CONDENSING STEAM AND HEATING FEED-WATER. FREDERICK SAMUELSON, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Sept. 26, 1918. Serial No. 255,817. 3 Claims. (Cl. 257—24.)

1. The combination of a prime mover, a feed water heater comprising tubes through which the water to be

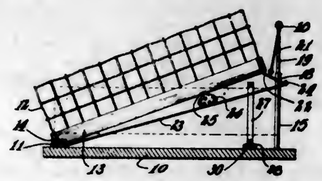


heated flows, said water flowing first through the lower tubes and then through the upper tubes, a conduit for leading heating steam from the prime mover to the feed water heater, a conduit for conveying the condensate therefrom, a valve in the last named conduit, and means controlled by the level of condensate in said feed water heater for operating said valve.

1,375,978. STOVE-LID. WILLIAM SCHARFHAUSEN, Spencer, Idaho. Filed May 12, 1920. Serial No. 380,717. 1 Claim. (Cl. 126—220.)

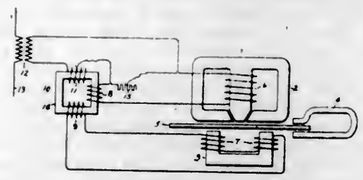
A stove lid, consisting of a ring having its edge adapted to seat within the rabbeted opening of the stove, and having an integral cup-shaped casing dependent from the same and co-axial with the ring and spaced apart outwardly from the opening through the ring, said casing having radial discharge openings adjacent to the ring, and the edge of the opening of the ring being beveled from above outwardly and inwardly, and a disk having a beveled edge seated in the opening.

1,375,979. PIPE-COATING MACHINE. ROCK G. TABER, Dallas, Tex. Filed Mar. 4, 1920. Serial No. 363,273. 6 Claims. (Cl. 91—30.)



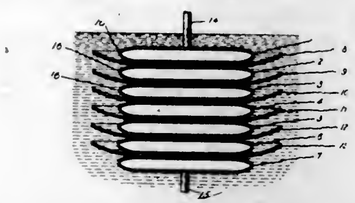
1. In a machine for coating pipes, a tank for holding the fluid coating material, supporting means for the tank, a second tank arranged beneath the pipes for receiving the lower portion of the pipes and holding the coating material discharging from the upper portion of the pipe in contact with the lower portion of said pipe, and means for supplying the fluid material from the tank to the upper portion of the pipes.

3. In a machine of the character described, a tank for holding a coating fluid, supporting means for the tank whereby it is adapted to move longitudinally of the pipes to be coated, outlet means for the tank for supplying the fluid to the pipes, a support connected with the tank, and supporting means for a roll of paper or the like connected with the support.



1,375,980. MOUSETRAP. STANLY TANSKI, East Vandergrift, Pa. Filed Dec. 29, 1920. Serial No. 433,794. 4 Claims. (Cl. 43—62.)

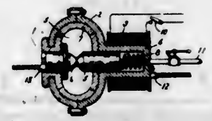
3. An animal trap comprising a base, a cage pivotally attached thereto at one end, a latch adapted to have one end engage and support the free end of the cage in raised position, a hooked bait-carrying member adapted to engage the opposite end of the latch, a link from which said latch is freely suspended at a point between its ends, an inverted U-shaped bar from which said link is suspended, a pair of tubular posts on said base into which the legs



of the said bar project, the said legs of the bar having notches spaced therealong, and springs on said posts yieldingly engaging in said notches.

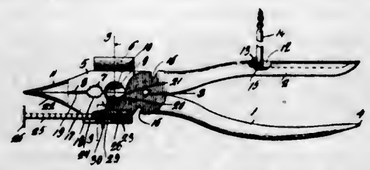
1,375,981. PROTECTIVE DEVICE. BENJAMIN H. THOMPSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 28, 1919. Serial No 320,524. 7 Claims. (Cl. 175—294.)

4. A relay comprising operating means responsive to overload current, a transformer controlling said operating means, and means associated with said transformer for impressing a potential on said operating means which varies as the overload current up to a predetermined amount and is then constant independent of the overload current.



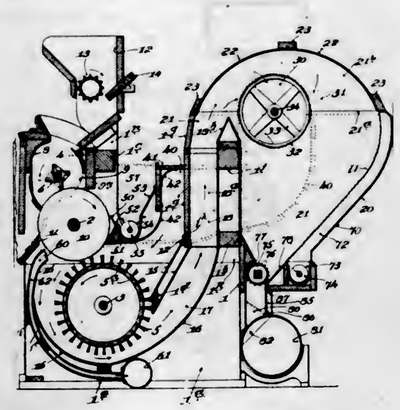
1,375,982. CONDENSER. ELIHU THOMSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 16, 1916. Serial No. 131,766. 4 Claims. (Cl. 250—41.)

4. A condenser comprising a series of conducting shells, sheets of dielectric material arranged between the same and terminals connected to the end shells of said series only, the opposite surfaces of said shells being substantially parallel and the portions of said shells between said surfaces being tapered away from the adjacent sheets of dielectric material.



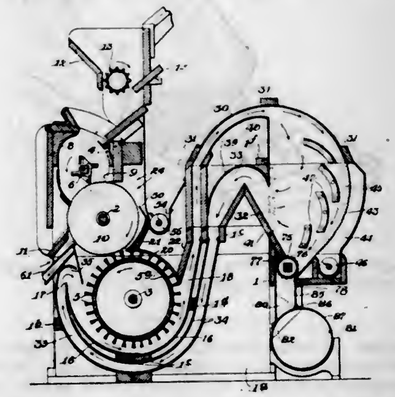
1,375,983. ELECTRIC SWITCHING DEVICE. ELIHU THOMSON, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 11, 1917. Serial No. 196,056. 15 Claims. (Cl. 200—144.)

1. In an electric switching device, relatively movable cooperating contacts, a substantially closed vessel inclosing said contacts and adapted to contain a high pressure atmosphere, and means for separating said contacts and



producing a strong magnetic field which aids in attenuating the arc formed within the high pressure atmosphere of said vessel to extinguish it with great rapidity.

1,375,984. TOOL. ANTONIO N. TRULLENCH, Lucena, Philippine Islands. Filed Oct. 29, 1919. Serial No. 334,154. 7 Claims. (Cl. 294—48.)



1. A tool comprising pivotally connected handles, a jaw formed on each handle, a perforated projection formed on one jaw, a ratchet bar passing through said perforated projection, and means carried on the jaw for engaging the ratchet bar.

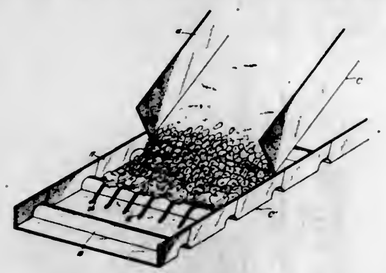
1,375,985. MECHANISM FOR REMOVING USEFUL FIBER FROM SEEDS. ARTHUR A. VARDELL, Dallas Tex.; Highland Gee Vardell executrix of said Arthur A. Vardell, deceased. Filed Aug. 9, 1919. Serial No. 316,459. 29 Claims. (Cl. 13—9.)

10. A gin of the saw type comprising a rotary doffing brush and having therein a casing surrounding the doffing brush and comprising a pneumatic delivery passage receiving the air-current set up by rotation of the brush, said casing having a return passage delivering to the suction side of the fan constituted by the brush, and means for stripping the air current flowing in said passages of fiber conveyed thereby, said passages and stripping means being substantially closed to the outer air.

1,375,986. MECHANISM FOR REMOVING USEFUL FIBER FROM SEEDS. ARTHUR A. VARDELL, Dallas, Tex.; Highland Gee Vardell executrix of said Arthur A. Vardell, deceased. Filed Aug. 9, 1919. Serial No. 316,460. 15 Claims. (Cl. 13—9.)

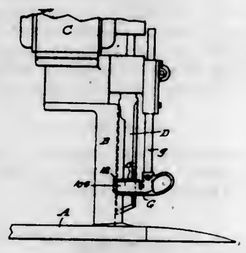
4. Mechanism for separating useful fibers from seeds or aggregates of fiber having therein means for throwing the separated fibers into an air-curent, means for causing cyclonic motion of the air-current in a closed passage, whereby to drop a part of the air-borne fiber, means for returning the air-current to receive a further charge of fiber, and means for delivering the dropped fiber from the machine.

1,375,987. GAS-RADIATOR. MARIUS VASSELON, St. ETIENNE, France. Filed Mar. 6, 1920. Serial No. 363,766. 3 Claims. (Cl. 126—89.)



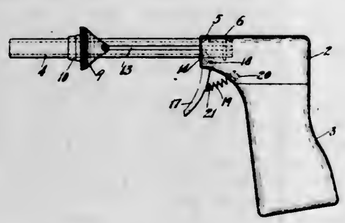
1. A gas radiator for heating purposes comprising in combination a base part, a sheet metal casing supported and having its bottom formed by said base member, a plurality of horizontally staggered rows of tubes extending transversely from the front wall to the rear wall of the casing and opened at both ends, an opening in the front part of the casing underneath said tubes, a perforated gas pipe burner supported between the tubes and the base member and adapted to heat the tubes, said burner being connected to the gas supply, a parabolic reflector extending from side to side of the casing at the rear of said opening, and burner, the focus line of which is adapted to coincide with the center line of the flames issuing from the burner, and an outlet at the top of the casing adapted to discharge the spent gases.

1,375,988. ATTACHMENT FOR COAL-CONVEYERS. CLARENCE GASTON WALKER, Bramwell, W. Va. Filed Nov. 3, 1919. Serial No. 335,410. 10 Claims. (Cl. 193—24.)



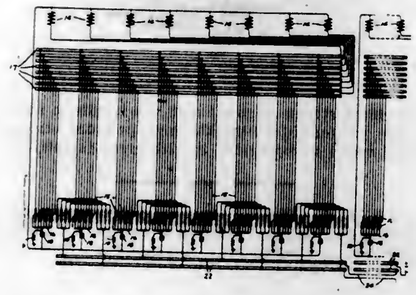
3. In combination, a chute, a picking table disposed below said chute and comprising hinged sections having joints disposed above the bottom wall of the table and extending transversely thereof, and a plurality of flexible members

secured to the delivery end of the chute and having their free ends lying on the picking table and adapted to be



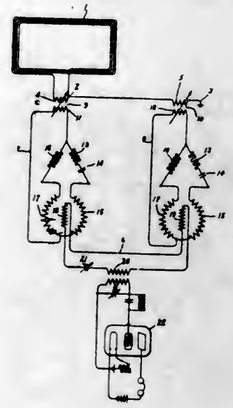
engaged by said joints for imparting a wave-like motion to the members when the picking table is moved.

1,375,989. CLOTH-CUTTING MACHINE. JAMES EARLE WILLIAMS, Chicago, Ill., assignor to Eastman Machine Company, Buffalo, N. Y. Filed June 30, 1919. Serial No. 307,823. 7 Claims. (Cl. 164—75.)



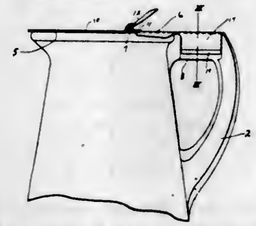
1. In a cloth cutting machine, the combination with a base, a standard which rises from said base, a driven knife, and a presser foot for engaging the material being cut adjacent to the knife, of means carried by said presser foot for applying lubricant to the knife.

1,375,990. TOY PISTOL. PAUL L. L. YORGENSEN, Hartford, Conn. Filed Feb. 2, 1921. Serial No. 441,782. 5 Claims. (Cl. 124—7.)



1. A toy pistol comprising a frame, a barrel connected with the frame, a spring having a hole to receive the barrel, the barrel being provided with means for holding the spring in position, an ejector in the barrel, connections between the free portions of the spring and the ejector, and a trigger mounted on the frame, and a latch to hold the ejector back and the spring tensioned, the trigger being provided with means to trip the latch and thus release the ejector.

1,375,991. SYSTEM OF ELECTRICAL DISTRIBUTION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 6, 1917. Serial No. 195,022. 8 Claims. (Cl. 172—237.)

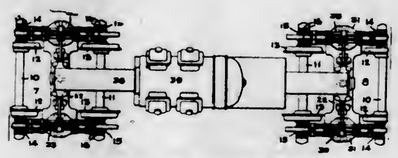


1. Apparatus for generating and distributing alternating current energy of high frequency comprising in combination, a high frequency alternator having a group of independent armature circuits, a transformer having a plurality of primary and secondary coils, each of said primary coils being wound of a plurality of independent conductors, and means for electrically connecting each conductor of each primary coil to an individual armature circuit so that each conductor is directly connected in a complete electric circuit with only one armature circuit and each armature circuit is connected to only one conductor of each primary coil.

1,375,992. RADIO-RECEIVING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 18, 1919. Serial No. 291,114. 6 Claims. (Cl. 250—11.

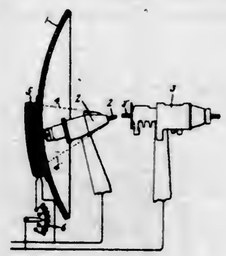
1. The combination in a radio receiving system of an aperiodic receiving antenna, means for deriving from said antenna two separate currents, one due to the magnetic exposure and one due to the electrostatic exposure and one due to the electrostatic exposure, a receiving circuit associated with said antenna, means for impressing the two currents derived from the antenna upon said receiving circuit, and means for varying the phase of either of the currents thus impressed upon the receiving circuit.

1,375,993. LIQUID-CONTAINER PROVIDED WITH REMOVABLE HINGED TOP. CHARLES S. BARON, Tiffin, Ohio. Filed July 9, 1919. Serial No. 309,580. 1 Claim. (Cl. 65—13.)



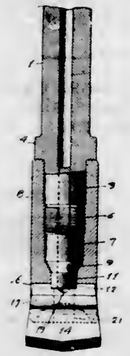
The combination with an open-mouthed container, provided upon one side thereof with a projection having a cross-sectional contour defined by respective pairs of lateral faces upwardly convergent to the top of the member from medial points and downwardly convergent from said points, constituting oppositely acting wedges, of a top provided with a spring clip member detachably fitting over said projection, said member having resilient cheek-plates terminating in lips adapted to engage and to be moved apart by said wedges when the clip member is applied to and removed from said projection, the distance between the pair of upwardly converging lateral faces at the top of the projection being less than the normal distance between the lips of the cheek-plates.

1,375,994. AUTOMOBILE-LOCK. JAMES W. BARWICK, Pinepark, Ga. Filed Jan. 15, 1920. Serial No. 351,736. 2 Claims. (Cl. 70—90.)



1. An automobile lock comprising a pair of jaws hinged together at their lower ends to permit the same to be opened or closed, said jaws having seats formed in their opposed faces and adapted, when the jaws are closed to aline for the reception respectively of the steering arm carried by the wheel of an automobile and the actuating rod therefor to prevent the same from having relative movement, said jaws being adapted to be placed upon said arm and rod immediately in rear of their pivotal connection when the wheel is at one limit of its turning movement, one of said jaws having a downwardly extending arm to bear against the front axle, and means for holding the jaws in locked position.

1,375,995. SELF-PROPELLED MOTOR-CAR. ASA F. BATCHELDER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 11, 1918. Serial No. 262,019. 10 Claims. (Cl. 105—139.)

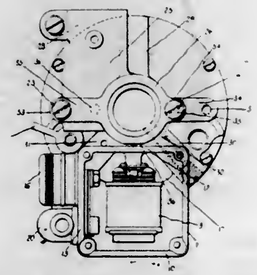


1. In combination, a pair of trucks, a car body supported thereby, an engine, and means for supporting the engine on said two trucks independently of the car body.

1,375,996. METHOD OF AND APPARATUS FOR PREVENTING INJURY OF SEARCHLIGHT-MIRRORS. HEINRICH BECK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 12, 1920. Serial No. 388,503. 5 Claims. (Cl. 176—51.)

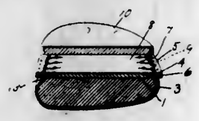
2. The method of preventing injury to reflectors used with a heat radiating source of light due to its unequal expansion which consists in applying heat to that portion of the reflector which does not receive direct heat radiation from the arc.

1,375,997. DRILL. HENRI BERNAY, San Francisco, Calif., assignor, by mesne assignments, to Fred W. Thurston, San Francisco, Calif. Filed May 31, 1919. Serial No. 301,347. 3 Claims. (Cl. 306—43.)



1. In a drill, the combination of a longitudinally bored drill bar having a screw threaded portion and a bit-locking extension; a longitudinally bored chuck in which fit said portions of the drill bar, the chuck having a screw thread engaging on that of said drill bar, and being formed with a central bore open at its lower end and with a transverse slot intersecting the bore of the chuck; and a bit arranged across said bore so as not to close the same, and laterally slidable in said slot, said bit and slot having means for holding the bit from movement longitudinally of the drill bar, the bit having also a recess in its upper edge with which the extension of the drill bar has a locking engagement, the extension entering said recess and binding or releasing the bit by the operation of said screw threads.

1,375,998. ELECTRICAL APPARATUS FOR MOTOR-VEHICLES. JOSEPH BIJUR, New York, N. Y., assignor to Bijur Motor Appliance Company, Hoboken, N. J., a Corporation of Delaware. Filed June 27, 1918. Serial No. 242,247. 11 Claims. (Cl. 123—149.)

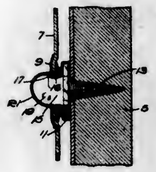


6. In electrical apparatus for motor vehicles, in combination, a generator having an end head, a housing hav-

ing a tubular cavity to one side of the generator shaft secured to said end head, said housing being substantially symmetrical with respect to a plane parallel to said end head, said end head having symmetry for permitting said housing to be secured thereto, with said cavity located at either side of said shaft, a shaft for driving ignition apparatus, disposed in said tubular cavity, and a transmission for driving said shaft from said generator.

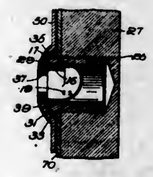
11. In apparatus of the class described, in combination, a dynamo, including an end head, said head having a bearing surface therein, three integral radial passages on said end head, and leading to said bearing surface, a casing for an automatic switch formed integrally with said end head, substantially symmetrically with said passages and integrally with two of them, whereby when said dynamo is mounted in substantially any non vertical position, some one of said passages may be used for feeding lubricant and another when sealed at its outer end, as a lubricant reservoir.

1,375,999. WELT-SHOE. CHARLES C. BLAKE, Brookline, Mass. Filed June 8, 1917. Serial No. 173,489. 3 Claims. (Cl. 36—17.)



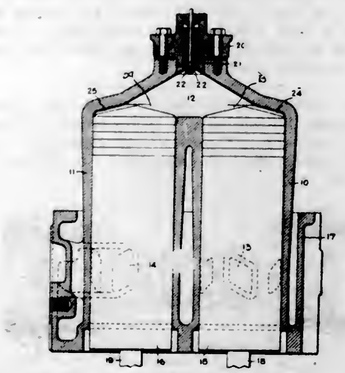
1. A welt shoe having its upper lasted to the edge face of the insole and its welt secured to the lasted shoe with the faces of the welt and insole engaged by the outsole in the same plane, and having a break in its upper, said break being adjacent the insole and located above the exposed face of the welt.

1,376,000. AEROPLANE. HANS BOSSART, Los Angeles, Calif. Filed Feb. 16, 1918. Serial No. 217,579. 3 Claims. (Cl. 244—14.)



1. An aeroplane of the class described having a frame comprising a pair of top rails, a pair of bottom rails converging at their front and rear ends into a single rail, braces for connecting said rails whereby said frame will be square in cross section intermediate its ends and triangular in cross section throughout its end portions, a plane situated on said frame, a rudder, and elevating means.

1,376,001. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed July 14, 1919. Serial No. 310,592. 13 Claims. (Cl. 24—214.)



1. A stud and socket fastener comprising a ring-like socket or eyelet closely adapted to the stud and a stud terminally extended in the direction of strain to provide a head, said stud being substantially rigid in the line of strain and resilient laterally.

1,376,002. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Original application filed July 14, 1919, Serial No. 310,592. Divided and this application filed Oct. 22, 1920. Serial No. 418,681. 10 Claims. (Cl. 24—214.)

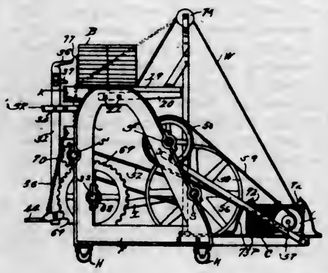
1. A fastener for curtains and the like comprising, in combination, a resilient stud having a shank, means for securing said stud to the curtain, a rigid socket, means for securing said socket to a rigid support, said stud and socket separable by tipping of the stud in a predetermined direction only, and coöperating stop means between the shank of the stud and socket, said stop means opposing translation of forces arising from strain in a direction generally transverse to the longitudinal axis of the stud into a resultant force which, if unopposed, would tip the stud relative to the socket in that predetermined direction necessary to disengage said stud from said socket.

1,376,003. COMBUSTION-CHAMBER. HENRI G. CHATAIN, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Sept. 19, 1916. Serial No. 121,081. 4 Claims. (Cl. 123—53.)

1. In an internal combustion engine, a cylinder structure comprising two cylinders arranged side by side and

having a common combustion chamber in direct communication therewith, pistons in said cylinders, said common combustion chamber being of flattened cone shape with the apex of the cone midway between the two cylinders and the base of the cone extending over both pistons, and a fuel injector located at the apex of the cone for discharging a spray of fuel into the combustion chamber of the same contour as the chamber whereby such fuel is distributed evenly over both piston heads.

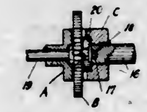
1,376,004. HEADPIECE FOR METALLIC PICCOLOS. NILS CHRISTENSEN, Boston, Mass. Filed June 20, 1919. Serial No. 305,553. 5 Claims. (Cl. 84—384.)



2. A piccolo comprising a body-portion having a cylindrical bore and a head-piece having an enlarged portion adjacent the joint end.

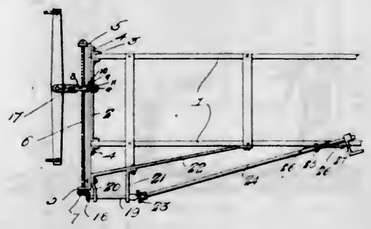
1,376,005. FORCEPS. SYLVESTER T. COHANE, Hartford, Conn. Filed Mar. 4, 1920. Serial No. 363,144. 2 Claims. (Cl. 32—10.)

2. Dental forceps comprising levers each equipped with a jaw member at its ends, the jaw members being formed to coöperate in pairs, one adapted to an upper set of teeth, and the other to a lower set of teeth, the levers having headed studs near their ends, the heads of the studs being of elliptical formation, and the levers having elliptical slots to alternately receive the studs.



1,376,006. BINDING-MACHINE. ALBERT EARL CRANSTON, Spokane, Wash. Filed Sept. 13, 1919. Serial No. 323,542. 14 Claims. (Cl. 100—31.)

1. A binding machine, comprising a knotter, mechanism for actuating said knotter, driving means for said mechanism normally disconnected therefrom, a manually operable lever for controlling said driving means capable of occupying one extreme position wherein said means is connected to said mechanism and another extreme position wherein said means is disconnected from said mechanism, means for biasing said lever to the last-mentioned extreme position, and a needle capable of occupying a threading and nonthreading position with relation to said knotter and operatively connected to said lever to occupy one position or the other according as said lever occupies one extreme position or the other.



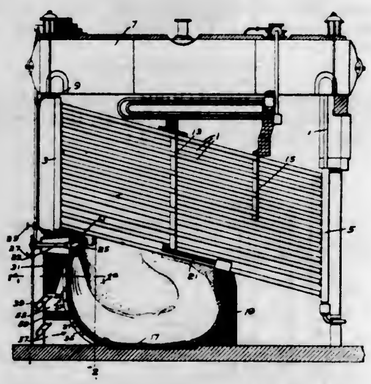
7. In a binding machine, a needle, comprising a bar, a positioning finger, a guide finger on the bar, and a tension device carried by the bar.

1,376,007. CLUTCH FOR THE ENGAGEMENT AND DISENGAGEMENT OF SHAFTS. JOHN THOMAS DALTON and CHARLES DALTON, Berry Brow, near Huddersfield, England. Filed Sept. 8, 1920. Serial No. 408,969. 1 Claim. (Cl. 123—185.)

The combination, with a revoluble shaft, and a driven member secured thereon and provided with a series of recesses in its front face; of a revoluble and longitudinally slidable operating shaft arranged in line with the aforesaid shaft, a disengaging wheel journaled loosely on the said operating shaft and provided with a series of slots which register with the said recesses and which have inclined portions, means for preventing the disengaging wheel from revolving backwardly, and a driving member secured on the said operating shaft and provided on its rear face with teeth which project through the said slots and normally engage with the said recesses and which revolve the driven member when the operating shaft is revolved forwardly, said teeth having inclined portions which engage with the inclined portions of the disengaging wheel, said disengaging wheel operating, when held stationary and when the first said shaft is revolved backwardly, to slide the driving member forwardly out of engagement with the driven member.

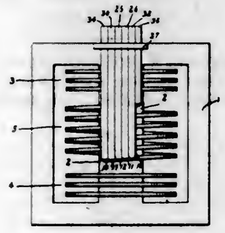
1,376,008. DRAFT MECHANISM. FERDINAND F. DASENBROCK, Teutopolis, Ill. Filed July 11, 1917. Serial No. 180,007. 4 Claims. (Cl. 97—4.)

3. In a draft device of the class described, a draft member, a worm shaft rotatably mounted thereon, means for rotating the shaft, a block fitting the shaft and adjustable longitudinally thereof in the rotation of the shaft, a draft head having spaced portions extending above and below the draft member and the said block, spindles carried by the said portions of the draft head and engaging the said block whereby the head is supported for oscillatory movement upon the block, rollers mounted upon the said spindles in position to engage one side of the draft mem-



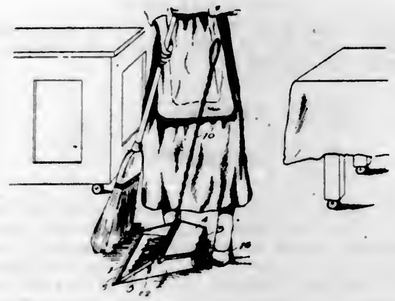
ber, and other rollers mounted upon the said spaced portions of the draft head in position to engage the opposite side of the said draft member, whereby to limit the oscillatory movement of the head.

1,376,009. WELL APPARATUS. WILLIAM LINCOLN DUNN, Oxnard, Calif., assignor to Dunn Manufacturing Company, Oxnard, Calif., a Corporation of California. Filed Nov. 17, 1919. Serial No. 338,721. 2 Claims. (Cl. 255—35.)



1. In well apparatus, a floor circle brace comprising two telescoping members, and locking means for maintaining the same in position of relative adjustment, said locking means comprising a part threaded adjacent to the end of one of said members and carrying a locking finger having a downwardly directed end portion provided with a plurality of transverse teeth, the other telescoping member being transversely toothed and adapted to co-act with said first named teeth to form a strong gripping action; the said teeth being so formed as to resist compressive effort between the telescoping parts; one of said telescoping members being provided with an elongated grooved portion, and the other telescoping member being provided with a projecting pin for engagement with said grooved portion, thereby limiting telescopic action of said members in one direction and likewise preventing relative axial play of said members.

1,376,010. LIQUID-FUEL-BURNING FURNACE. MILTON A. FESLER, Oakland, Calif., assignor to Petroleum Heat and Power Company, a Corporation of Delaware. Filed Nov. 11, 1919. Serial No. 337,177. 12 Claims. (Cl. 158—1.)

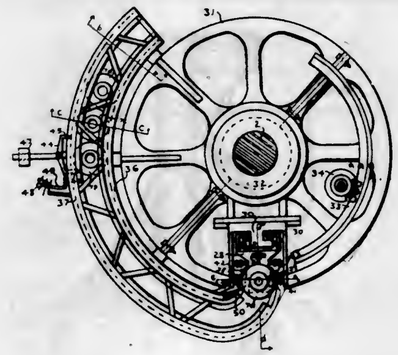


1. In a furnace for a water tube boiler, the combination of a combustion chamber having water tubes at the roof thereof and a bridge wall at the rear thereof, a liquid fuel burner projecting into the front of the chamber, brick checker work at the front of the chamber extending downward from the burner toward the base of the chamber and having openings therein graded and distributed in the direction of the flame from the burner, and means variably to admit air through the openings of said checker work to the fuel issuing from said burner.

1,376,011. ELECTRIC APPARATUS. JOHN J. FRANK, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 25, 1919. Serial No. 292,609. 7 Claims. (Cl. 175—356.)

1. A winding comprising a plurality of coil groups in which conductors in each group are disposed one outside another radially and connected respectively in series with conductors in another coil group to form lots of series connected conductors, the lots being connected in series and taps for the windings being provided between each lot of conductors.

1,376,012. DUSTPAN. IRVING MADISON FREEMAN, Fayetteville, Ark. Filed Nov. 25, 1919. Serial No. 340,554. 1 Claim. (Cl. 65—63.)

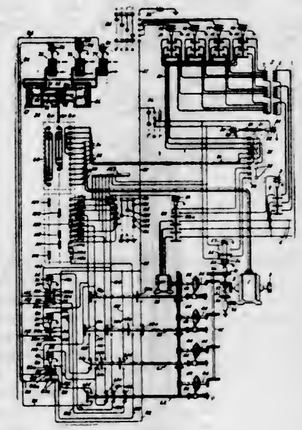


A dust pan formed from a single sheet of material and including a bottom, sides formed on the side edges of the bottom and extending upwardly therefrom, a back formed upon and extending upwardly from the rear edge of the bottom, a top formed on said back and extending over the bottom in spaced, substantially parallel relation thereto and forming with the back and sides, a hood, a handle pivotally connected with the sides, and a foot piece including a horizontal portion adapted to lie upon the ground or other surface and further including spaced arms extending through the bottom and top adjacent the back and having their free extremities clenched over the rear edge of the top.

1,376,013. MACHINE FOR DISCHARGING PROJECTILES. JOSEPH N. GILBERT, Minneapolis, Minn. Filed Mar. 14, 1918. Serial No. 222,431. 2 Claims. (Cl. 89—10.)

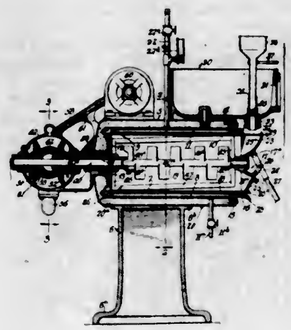
1. In a centrifugal gun, a rotary discharger, a projectile track thereon, said track having a portion thereof concentric with the center of rotation of said discharger and

a portion thereof extending radially, means to supply and hold projectiles in contact with said concentric portion



throughout a part revolution and release said projectiles thereon whereby they are given an initial rotation.

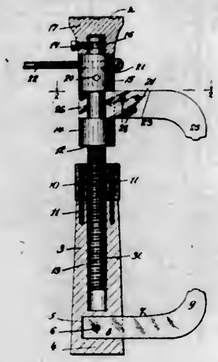
1,376,014. GRAPPLE. JAMES C. GINTER, Breckenridge, Tex. Filed Nov. 12, 1920. Serial No. 423,603. 2 Claims. (Cl. 294—102.)



1. A device of the class described, comprising a body having a socket opening out through its forward end, the side walls of said socket being provided with grooves extending obliquely with relation to the longitudinal axis of the body, and terminating short of the forward end of the body, jaws slidable within said grooves and provided with teeth, the rear end portion of said body being provided with a head having a longitudinally extending opening, a longitudinally slidable plunger within said opening, and having its forward portion split longitudinally thereby forming a pair of spaced parallel arms arranged on opposite sides of said socket and having connection with said jaws, the rear end portions of said arms being extended across the rear portion of said socket to form a tool contacting element, a tubular attaching member connected to said head and provided with a socket, and a compression coil spring arranged within said second named socket and engaging the rear end of said plunger for normally advancing the same, the side walls of said first named socket being provided with grooves receiving said arms and communicating with said first named grooves.

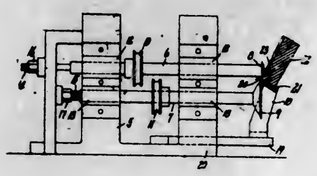
1,376,015. ELECTRICAL REGENERATIVE CONTROL APPARATUS AND SYSTEM. WILLIAM S. H. HAMILTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 8, 1919. Serial No. 280,308. 25 Claims. (Cl. 172—274.)

1. The combination with a variable pole dynamo electric machine operable as a motor or as a generator, of means operated responsively to the speed of said machine for changing the number of poles thereof at a predetermined speed during motoring operation and at a different speed during generating operation.



1,376,016. FREEZER. CLAUDE F. HOWELL, Chicago, Ill., assignor, by mesne assignments, to Continental Machinery Company, a Corporation of Delaware. Filed July 29, 1918. Serial No. 247,144. 3 Claims. (Cl. 257—84.)

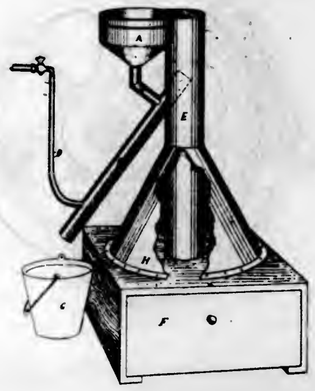
1. A freezer comprising a pair of concentrically arranged, spaced, tubular members, rings between the ends of said members for holding them in spaced relation, said tubular members and rings providing a jacket space, a rear head plate including a hub, a front ring plate, the rear end of said inner tubular member engaging the face of said rear head plate and the rear end of the outer tubular member overlapping and being secured to the periphery of said rear head plate, the front ends of both of said tubular members engaging the face of said front ring plate, a front head plate secured to said ring plate and defining with said rear head plate and tubular members, a freezing chamber, the front head plate having inlet and outlet openings for said freezing chamber, an



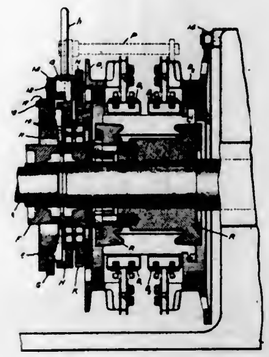
agitating means in said freezing chamber, journaled in said hub and in said front head plate, respectively, and means for connecting said jacket space with the supply and return line of a liquid refrigerant supply.

1,367,017. COMBINED JACK AND CLAMP. JOHN JOHNSEN, New Brighton, N. Y. Filed June 25, 1920. Serial No. 391,700. 1 Claim. (Cl. 7—1.)

A combined jack and clamp comprising a base, a hook member secured to said base to project therefrom in a fixed direction with respect thereto, a nut secured to said base, a lifting member in threaded engagement with the said nut, a lifting head rotatably carried by said lifting member, a plurality of integral collars on the lifting member, a second hook member, means for securing the latter to the said lifting member between the said collars thereon, said second hook member being rotatably carried by said lifting member and being adapted to be mounted with its hook portion pointing either upward or downward, and means for operating said lifting member.



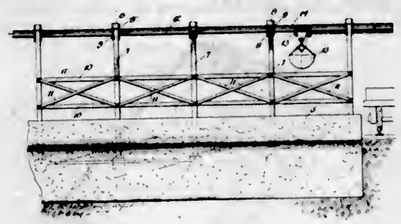
1,376,018. MACHINE FOR TRIMMING THE OVERFLOW FROM THE BREAST OF RUBBER HEELS. THOMAS E. KANE, Canton, Mass., assignor of one-half to Abraham Sydeman, Boston, Mass. Filed Jan. 19, 1920. Serial No. 352,291. 4 Claims. (Cl. 12—47.)



4. A machine for trimming the overflow from the breast of rubber heels having, in combination, a rotary cutter and a convexly curved work-support adjacent the periphery of said rotary cutter, the work-supporting face of said work-support being inclined to the median axial line of said cutter.

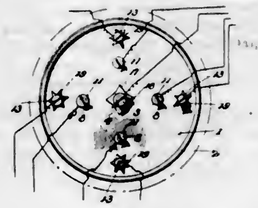
1,376,019. SEPARATOR FOR METAL AND WOOD SAWDUST. SOLOMON J. KELLEY, Binghamton, N. Y. Filed Apr. 14, 1919. Serial No. 290,036. 4 Claims. (Cl. 83—54.)

1. In a separator, a receiving chamber, a receptacle with which the receiving chamber communicates, an inclined conduit communicating with the receiving chamber at its upper end, with its lower end open to serve as a discharge, a valve controlled air blast means projecting into the inclined conduit intermediate its ends and a hopper communicating with the inclined tube below its upper end.



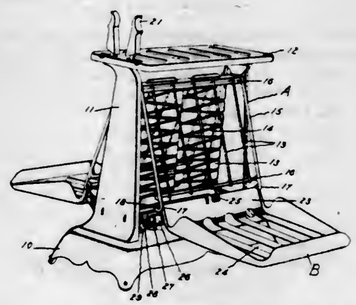
1,376,020. BRUSH-SHIFTING DEVICE FOR ALTERNATING-CURRENT MOTORS. WILLEM C. KORTHALS-ALTES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 13, 1918. Serial No. 216,948. 10 Claims. (Cl. 172—280.)

1. In an alternating current commutator motor, a brush shifting device comprising coöperating sets of brushes, a pair of rotatively mounted yokes for movably supporting said sets of brushes, movable and stationary gears and coöperating planetary gears all connected to said yokes in a manner for effecting their simultaneous angular movements through relatively different amplitudes in a predetermined ratio.



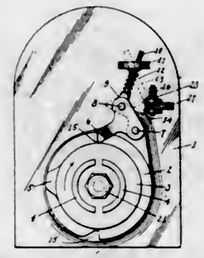
1,376,021. STORAGE-BIN. NELSON M. LANGDON, Mancelona, Mich. Filed Aug. 25, 1919. Serial No. 319,594. 8 Claims. (Cl. 214—17.)

1. An apparatus for the purpose set forth comprising an elongated permanent stationary storage receptacle having downwardly converging imperforate side walls, and an overhead container mounted to travel longitudinally



of said receptacle from end to end thereof to deliver material thereto or withdraw material therefrom.

1,376,022. SPARK-TROUBLE LOCATOR. SAMUEL P. LANGMAID and LEONARD A. WALTON, Seattle, Wash. Filed Sept. 1, 1920. Serial No. 407,454. 1 Claim. (Cl. 175—183.)

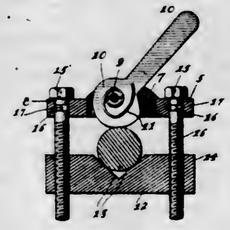


An indicator for spark plug circuits including an insulating base, a ground post arranged therein, a series of leading-in circuit posts arranged in concentric relation with the ground post, a series of leading-out circuit posts, arranged in concentric relation with the leading-in posts, a spark-gap member having a plurality of points mounted eccentrically on the upper end of each leading-out post to permit variation in the gap between said post and the particular leading-in post, and a plural point spark-gap member carried by the upper end of the grounding post.

1,376,023. ELECTRIC HEATING DEVICE. MILTON E. LONG and GEORGE W. KATZUNG, Pittsfield, Mass., assignors to General Electric Company, a Corporation of New York. Filed Apr. 2, 1917. Serial No. 159,064. 8 Claims. (Cl. 219—19.)

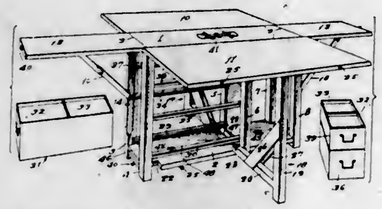
6. In a heating device, the combination of a substantially vertical heating element, a pivoted basket for holding the article to be heated and held by gravity adjacent the heating element, and means for swinging the bottom of the basket outwardly and then swinging the outer section downwardly and returning the sections whereby the article is reversed in its position relative to the heating element.

1,376,024. AUTOMATIC PAWL-THROW FOR MAGNETOS OR THE LIKE. PHILLIP E. MATTHEWS, Plainfield, N. J. Filed July 3, 1919. Serial No. 308,602. 2 Claims. (Cl. 123—149.)



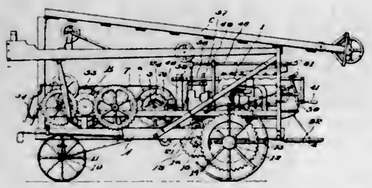
1. In combination with an ignition generator having field magnets capable of oscillating through a predetermined angle for advancing and retarding the ignition and having an impulse starting coupling comprising an operating shaft, a driven member fastened to said shaft, a driving member associated therewith, a resilient member forming a driving connection between the driving and driven members, a pivoted pawl stop for said driven member and shaft, means operated by the driving member for engaging the pawl stop to remove it from engagement with the driven member, and yielding means for holding the pawl "in" or "out" of engagement with the driven member after having been so positioned, and means operated by the oscillation of said magnets for throwing said pawl into engagement with said driven member when the magnets are oscillated to retard the ignition.

1,376,025. PROCESS OF ROASTING ORES OR CONCENTRATES. PERCY R. MIDDLETON, Los Angeles, Calif., assignor of one-half to John C. Lalor, New York, N. Y. Filed Jan. 20, 1920. Serial 352,899. 4 Claims. (Cl. 75—18.)



1. Process of roating ores containing a metallic sulfid, comprising heating the ore with access of air to a reacting temperature below the ignition point of the sulfur in the ore; and maintaining such temperature until the maximum proportion of the sulfid of the metal to be recovered has been oxidized to sulfate.

1,376,026. CLAMP-DOG. ALBERT PAUL MILLER, Newcastle, Ind. Filed Apr. 13, 1920. Serial No. 373,501. 1 Claim. (Cl. 82—42.)



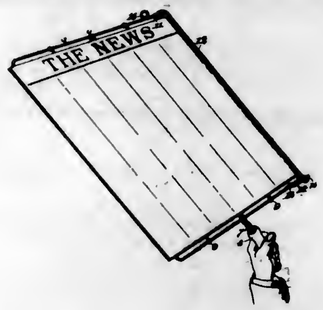
A clamping dog for grinders, lathes and the like comprising a bed block having a recess, a pivot pin fixed in said bed block and extending transversely across said recess, a clamping cam mounted for rotary movement on said pivot pin, a coil spring having one end seated in said pivot pin and the other end seated in said clamping cam to force said clamping cam to gripping position a clamping block associated with said bed block and means for adjusting said clamping block with respect to said bed block.

1,376,027. COMBINATION LUNCH KIT AND FOLDING TABLE. RUDOLPH W. MILLER, Orange, Calif., assignor to Orange Contracting & Milling Co., Orange, Calif., a Copartnership. Filed Feb. 23, 1917. Serial No. No. 150,609. 5 Claims. (Cl. 190—12.)

1. A combined kit and folding table comprising a central top; legs rigidly secured at their upper ends to the top and at each side thereof; a bottom rigidly joining said legs near their lower ends; folding leaves pivotally attached to the side and end edges of the top and extending to said bottom when they are folded; legs pivotally secured to said top and said bottom and adapted to support the folding leaves at the sides when the leaves are unfolded and to be swung under said top and between said side leaves when the side leaves are folded; means pivotally secured to each end leaf and to one of the first-named legs for holding the end leaf in unfolded position; and means for securing all the leaves in folded position to said bottom.

1,376,028. DRILLING-MACHINE. OTTO D. NORMAN, Spencer, W. Va. Filed Apr. 19, 1919. Serial No. 291,245. 8 Claims. (Cl. 255—11.)

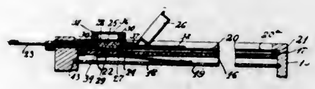
1. In a drilling machine, the combination, of a portable supporting structure, traction wheels carried thereby, a power plant supported by said supporting structure, a drilling mechanism carried by the supporting structure, an operating pulley for said drilling mechanism, means operatively connecting the power plant and pulley, a transmission mechanism connected to said traction wheels, and removable means adapted to engage said pulley for connecting the pulley to said transmission means for operatively connecting the power plant and traction wheels.



1,376,029. EXPLOSIVE COMPOSITION. FREDRICH OLSEN, Washington, D. C. Filed May 22, 1920. Serial No. 383,598. 3 Claims. (Cl. 52—7.)

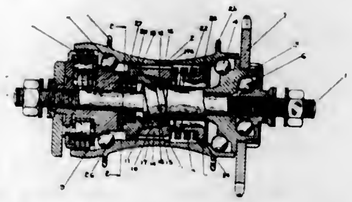
1. The herein described composition of matter, containing an inorganic perchlorate, a nitro-hydrocarbon, a propellent powder, a combustible non-explosive material, chlorin fixing material and a flame temperature regulating material.

1,376,030. DETONATING OR DISRUPTIVE EXPLOSIVE. FREDRICH OLSEN, Washington, D. C. Filed Jan. 15, 1921. Serial No. 437,580. 7 Claims. (Cl. 52—1.)



1. The herein described composition of matter, containing a nitro-starch explosive and a propellent powder.

1,376,031. NEWSPAPER-HOLDER. PETER OBEND, Cedar Rapids, Iowa. Filed Mar. 2, 1920. Serial No. 362,712. 2 Claims. (Cl. 129—36.)

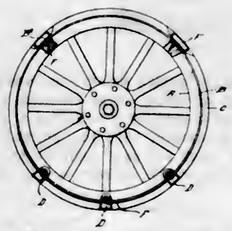


1. A newspaper-holder, comprising a rectangular frame of wire formed as a grid, with a central, twisted midrib, a handle connected therewith, a clamping wire hinged to the frame near one corner, and a fastener for the free end thereof attached to the opposite corner on the same side.

1,376,032. MEANS FOR AUTOGRAPHING SENSITIVE PHOTOGRAPHIC MATERIAL. JOHN W. OZOLS, Bridgeport, Conn. Filed June 12, 1918. Serial No. 239,616. 5 Claims. (Cl. 95—1.1.)

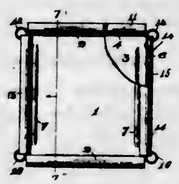
1. In a photographic autographic device the combination with means for inclosing and supporting a sensitive plate including a dark slide having an opening therein, a removable shutter for covering said opening, a ground glass for positioning in the opening, means for inclosing and positioning the ground glass comprising a housing having openings in its opposite sides, a closure cap covering the open side of the housing through which light is admitted, a movable bottom for covering the under side of said housing, and springs interposed between the housing and ground glass for forcing the latter into the opening of the dark slide when the shutter is withdrawn.

1,376,033. CLUTCH MECHANISM. VICTOR W. PAGÉ, Bristol, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed May 22, 1915, Serial No. 29,893. Renewed July 13, 1917. Serial No. 180,484. 25 Claims. (Cl. 192—53.)



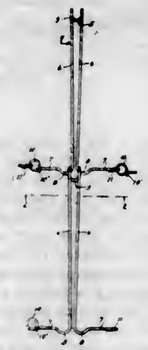
1. In a device of the character indicated, a driving member, a driven member, two clutches between said members, and means whereby upon actuation of said driving member in its driving direction one of said clutches is rendered effective and upon further actuation of said driving member in the same direction as before the other said clutch is rendered effective and continues so through successive cycles of operation of said driving member; substantially as described.

1,376,034. MEANS FOR PROTECTING BATTERY-ANODES. HERBERT R. PALMER, Cleveland Heights, Ohio, assignor of one-half to Charles A. Burke, Cleveland, Ohio. Filed Nov. 28, 1919. Serial No. 341,289. 1 Claim. (Cl. 204—29.)



A battery electrode provided with a protective coating over the entire surface that is acted upon by the electrolyte, said coating being dry after its application and possessing properties which render it impervious to moisture when the battery is inert but which make it penetrable by the electro-chemical action of the elements when the battery is connected for use.

1,376,035. DEMOUNTABLE RIM. ORREL A. PARKER, Cleveland, Ohio. Filed Mar. 17, 1917. Serial No. 155,488. 5 Claims. (Cl. 301—25.)



1. The combination with a wheel body, a portion of which is concentric and the remaining portion eccentric, of a felly band affixed thereto and having an inclined flange at the back, a demountable tire carrying rim adapted to fit upon said felly band, and rim fastening means attached to the eccentric portion of the wheel body and contacting with that portion of the rim contiguous to the eccentric portion of the wheel body.

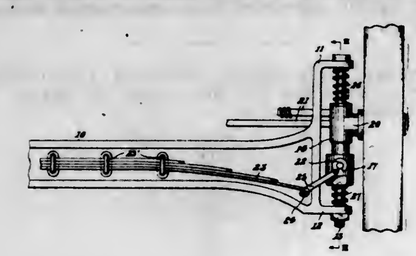
1,376,036. BOX CONSTRUCTION. JAMES R. PEARSALL, Rochester, N. Y. Filed Aug. 3, 1918. Serial No. 248,216. 2 Claims. (Cl. 220—60.)

1. A box construction having six rectangular walls, each of which has plain opposite side edges and resilient abutments along the other two sides, the resilient abutments of each wall exerting a pressure on the outer faces of two opposite walls of the box to hold said walls against the opposite edges of still two other opposite walls of the box.

1,376,037. WIRE FABRIC. WILBER J. PINE, Oshkosh, Wis. Filed July 23, 1917. Serial No. 182,268. 2 Claims. (Cl. 245—5.)

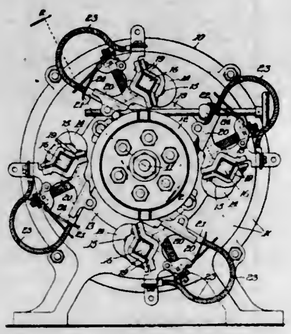
1. A wire fabric comprising a plurality of interengaging units, each unit comprising a pair of shanks arranged adjacent each other, arms extending outwardly in opposite directions from the ends of the shanks, the other ends of the shanks being overturned to form hooks in parallel planes spaced from the plane of the shanks, and an integral connecting hook-shaped loop joining the ends of said first-mentioned hooks and serving to close the mouths of said hooks, said connecting loop extending in a plane spaced from the plane of said shanks so as to be positioned substantially in the plane of the outwardly extending arms of the adjacent unit, whereby upon separation of said last-mentioned ends of said shanks said loop will yield both torsionally and by straight deflection.

1,376,038. LIQUID GLOSS FOR POLISHED SURFACES. ALBERT T. QUATTLANDER, Astoria, N. Y. Filed Jan. 8, 1921. Serial No. 435,946. 2 Claims. (Cl. 134—24.)



1. A liquid gloss of the character designated, composed of an admixture of lemon oil, turpentine, and ammonium acetate in substantially the relative proportions herein set forth.

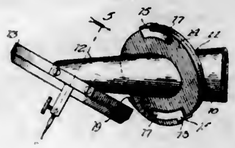
1,376,039. BONNET-FASTENER. ALDAS S. RIDGLEY, Boston, Mass. Filed Feb. 17, 1920. Serial No. 359,391. 9 Claims. (Cl. 70—14.)



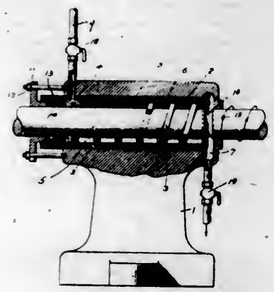
2. An automobile bonnet fastener composed of a plunger and a barrel connected for relatively telescopic but not rotary movement, and a spring drawing the plunger normally into the barrel; combined with an element rotatably mounted within the barrel and adapted to be turned into engagement with the plunger to prevent its withdrawal, and a lock controlling the turning of said element.

1,376,040. SPRING DEVICE FOR AUTOMOBILES. JOSEPH T. ROBERTS, Shelbyville, Ky. Filed Dec. 10, 1920. Serial No. 429,633. 5 Claims. (Cl. 267—29.)

5. In combination, a main axle member, a vertically disposed yoke at the end of the main axle member, a pin extending between the arms of the yoke, a sleeve slidably and rotatably mounted on the pin and having a reduced lower end screw threaded at its lower extremity, a stub axle projecting from the upper part of the sleeve, a cuff slidably and rotatably mounted on the lower part of the sleeve, a nut on the threaded portion of the sleeve to force the cuff upward therealong, a pair of pins projecting from said cuff, links each having one end pivotally mounted on a pin, and cantaliver springs each having one end fixed to the main axle member and its remaining end engaging the lower end of a respective link.



1,376,041. BRUSH-HOLDER. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Original application filed June 12, 1916, Serial No. 103,121. Divided and this application filed Nov. 6, 1919. Serial No. 336,109. 2 Claims. (Cl. 171—323.)



1. In a dynamo electric machine, a frame, a commutator, a brush-guide arranged in a line intersecting the surface of the commutator, a brush longitudinally movable in the guide, an arm extending parallel to the cylindrical surface of the commutator and supporting the said brush-guide, and a slotted member carried by the frame, having its slot parallel to the brush-guide, and means for securing the arm in adjusted positions along the length of the said slot, whereby by adjustment of the arm the brush-guide is moved in the direction of its length only.

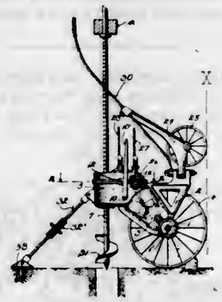
1,376,042. TONE-ARM CONSTRUCTION. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed June 19, 1920. Serial No. 390,210. 4 Claims. (Cl. 274—24.)

1. A tone arm comprising a relatively fixed tapered conduit section, a circular flange secured to its end at an angle to its longitudinal axis, a second conduit section having a taper conforming to that of the fixed conduit section, a circular flange secured to the end of said second section, said flange mating with the first mentioned circular flange, and means for retaining said flanges in mating relationship while permitting relative movement of the second flange with respect to the first flange.

1,376,043. SHAFT-BEARING. CHARLES FREDERIC SHERWOOD, Los Angeles, Calif. Filed Feb. 24, 1920. Serial No. 360,703. 8 Claims. (Cl. 64—24.)

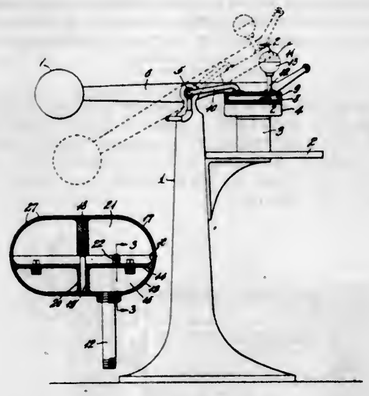
1. In a bearing, a bearing surface of resilient or yielding material and of spiral form adapted to support a rotating shaft and means for circulating a fluid between the spirals and in contact with the journal, said means consisting of an inlet for said fluid at one end of the spiral and an outlet at the opposite end of the spiral.

1,376,044. BRACKET FOR VEHICLES. IRVING A. SIBLEY, Jr., Chicago, Ill. Filed June 11, 1920. Serial No. 388,249. 5 Claims. (Cl. 293—55.)



5. The combination with the chassis of an automobile having side-sills and a rear transverse bolster, of brackets each comprising a longitudinally elongated member the forward end of which is attached to said sill, which extends to the rear, and between said forward end and bolster is offset laterally and is supported by said bolster, and a bumper the ends of which are secured to the rear ends of said brackets.

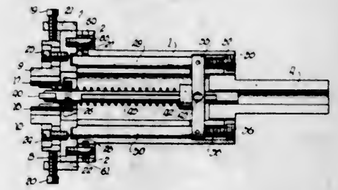
1,376,045. POWER-DRIVEN POSTHOLE-EXCAVATOR. CHRISTIAN SKOTT, Milwaukee, MARTIN J. ROGNE and ELMER J. ROGNE, De Pere, Wis. Filed Oct. 19, 1920. Serial No. 417,909. 3 Claims. (Cl. 255—22.)



1. A power driven post hole excavator comprising an axle having tractor wheels, a truck wheel mounted upon the axle and adapted to swing thereabout for adjustment, a rear wheel pivotally connected to the frame having steering bearings, an anchor leg carried by the frame for

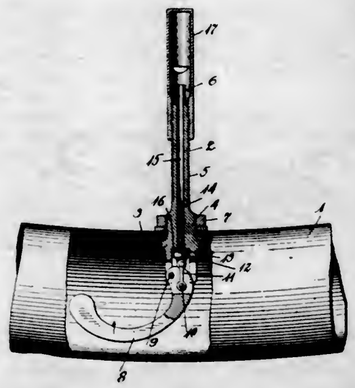
setting the same in predetermined adjusted working positions, and a power driven rotary spindle carrying an

excavating blade mounted in the frame and including means for rotating the spindle and for intermittently feeding the same longitudinally.



1,376,046. PUFF-IRON. ARTHUR E. SNOW, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed July 12, 1919. Serial No. 310,447. 2 Claims. (Cl. 68—26.)

1. A puff iron, comprising a hollow chambered cast metal base having a horizontal upper wall and an integral upwardly extending peripheral flange surrounding the same and forming a shallow pan shaped receiver for water of condensation, an inverted dome shaped perforated thin metal cover secured thereto with its edge resting upon said peripheral flange, and forming with said receiver a steam distributing chamber above said wall, means for supplying steam to the chamber in said base for heating the iron and vaporizing water of condensation collected upon said wall, and means for controlling the flow of steam from the base chamber to the chamber above said wall to be distributed through said perforated cover.

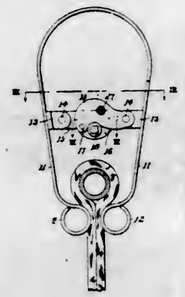


1,376,047. DIE-HEAD. LARENCE SPREITZER, Hammond, Ind., assignor to Edward Valve and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1919. Serial No. 308,751. 14 Claims. (Cl. 10—94.)

1. In combination, a body member having an axial bore and having guides arranged transverse to the bore, slide members mounted in said guides, means tending to force said slide members laterally, cutting jaws secured to said slide members, detent members for the slide members, said detent members being suitably guided on said body member, said slides having shoulders adapted to be engaged by said detent members, a contact member forming

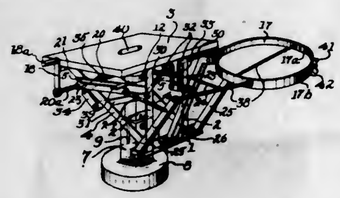
a trigger, said contact member being mounted substantially axially of said bore, and being connected to said detent members, and spring means tending to hold the detent members in engagement with the shoulders of the slide members.

1,376,048. PNEUMATIC-TIRE NIPPLE. HUGO STOMMEL, Metuchen, N. J., assignor of one-half to Harry Raymond, Metuchen, N. J. Filed Aug. 9, 1919. Serial No. 316,462. 1 Claim. (Cl. 116—34.)



In a pneumatic tire, a tire nipple provided with a central passage the inner end of which terminates in a valve seat, a valve associated with said seat and provided with a stem projecting into the passage to guide the valve in its operations, spaced lugs on the inner end of the tire nipple, an operating arm pivoted at one end to the spaced lugs, and free at its other end, and a link pivoted to the valve at one end and at its other end to the operating arm intermediate the ends thereof, said arm being curved back to underlie its pivot to enter rearwardly thereof to effect the operation of the valve through a toggle action, whereby the arm is operable when the tire becomes partially deflated through leakage or puncture to unseat the valve and allow air to escape through the passage of the nipple, in combination with an audible alarm associated with the outer end of the nipple and operable by the escaping air.

1,376,049. ROBE-CLAMP. WILLIAM G. STRETCH, Washington, D. C. Filed Jan. 12, 1921. Serial No. 436,648. 3 Claims. (Cl. 70—17.)



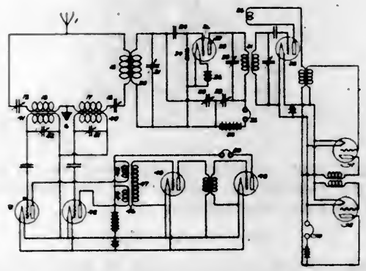
2. In a device of the kind described, a pair of legs yieldably connected for movement toward each other, gripping jaws on said legs, S-shaped links each having one end connected to the inside of a respective leg in spaced relation to its gripping jaw, a disk between said legs, pivot

connections between diametrical opposite points on the disk and the other end of each link, said links being arranged with their curvature oppositely disposed whereby rotation of the disk interlocks the ends of the links con-

nected thereto, and a polygonal projection extending from one side of the disk and forming means to receive a turning key, said projection being positioned to further constitute a stop in connection with one of the links and thereby limit rotation of the disk.

1,376,050. COMBINATION MILKING-STOOL AND PAIL-HOLDER. OSCAR A. STROMWALL, Foreston, Minn. Filed Apr. 29, 1920. Serial No. 377,488. 10 Claims. (Cl. 31—13.)

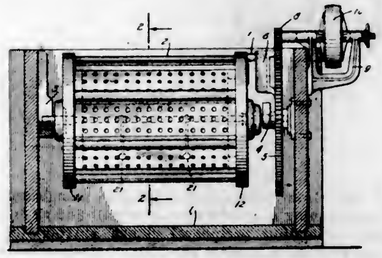
1. In a device of the class described, a vertically adjustable base, a seat and frame revoluble on said base, an extensible and retractile pail support mounted in said frame, a lever to extend and retract said pail support and another lever to adjust said pail support as to height.



3. In a device of the class described, a base, a central post adjustable vertically in said base, a seat and frame revoluble upon said central post, a pail supporting ring movably mounted in said frame and means for extending and retracting said ring, comprising a shaft revoluble in said frame, arms rigidly mounted on said shaft and a series of levers and rods connecting said arms with said ring.

5. In a device of the class described, an adjustable base, a seat and frame revoluble on said base, an extensible and retractile pail support mounted in said frame, a pair of levers tiltably mounted at their lower ends in said frame and connected by rods to said pail support at their upper ends, another lever tiltable in said frame and joined to said pail support at its upper end, means for tilting said levers to extend and retract said pail support and means for tilting one of said levers to adjust said pail support as to height.

7. In a device of the class described, a base, a central post adjustable vertically in said base, a seat and frame revoluble upon said central post, a pail supporting ring movably mounted on said frame and means for adjusting the height of said ring comprising a rod mounted in said frame, a hand lever mounted on said rod, a notched quadrant mounted on said frame and means connecting said rod and ring.

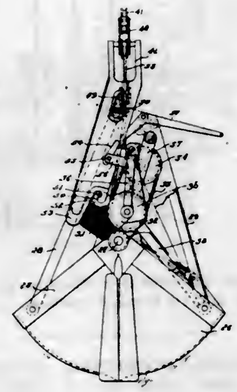


10. In a device of the class described, a base, a seat and frame revoluably mounted on said base, an extensible and retractile pail support mounted on said frame, means for extending and retracting said pail support, and means for adjusting said pail support as to height.

1,376,051. SIMULTANEOUS TRANSMISSION OR RECEPTION OF SPEECH AND SIGNALS. ALBERT HOYT TAYLOR, Grand Forks, N. D. Filed Apr. 10, 1919. Serial No. 289,149. 3 Claims. (Cl. 250—6.)

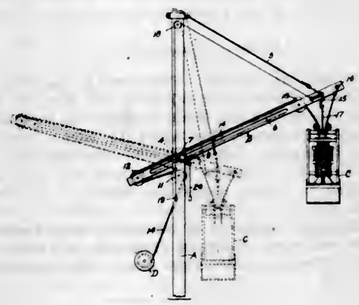
3. The combination in an apparatus for simultaneously receiving telephonic conversation and telegraphic signals, of separate circuits for receiving the telephone conversation intermittently on two widely different wave lengths and separate double heterodyne means for receiving the telegraphic signals on one of the two wave lengths.

1,376,052. CYLINDER FOR ELECTROPLATING APPARATUS AND THE LIKE. FLOYD T. TAYLOR and WESLEY F. HALL, Matawan, N. J., assignors to Munning-Loeb Company, Matawan, N. J., a Corporation of New Jersey. Filed May 13, 1918. Serial No. 234,213. 8 Claims. (Cl. 204—5.)



1. The combination of a vat adapted to contain a liquid, and a foraminous cylinder mounted to rotate therein, said cylinder having means whereby the cylinder in rotating lifts a material amount of the liquid from the vat and admits it to the interior of the cylinder.

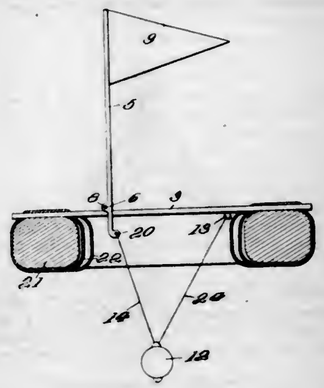
1,376,053. EXCAVATING MECHANISM. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed July 1, 1918. Serial No. 242,736. 5 Claims. (Cl. 37—30.)



1. An excavating bucket comprising in combination a pair of scoop segments, a hinge for joining the segments so that they may be closed when the hinge is elevated and opened when the hinge is lowered, a sheave-block, means for connecting the sheave-block with the hinge whereby the hinge may be raised thereby to close the bucket, a support,

an operating cable for raising and lowering the sheave-block, a bail for connecting the sheave-block with the support whereby the sheave-block is supported so as to main-

tain the segments in closed position independently of the operating cable, and means for permitting the lowering of the hinge to open the segments while the sheave-block is thus supported.

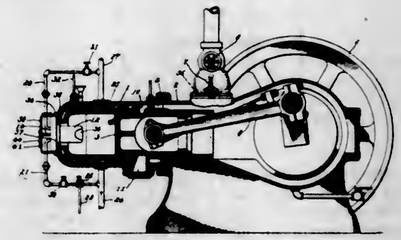


1,376,054. HOISTING-DERRICK. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Oct. 2, 1918. Serial No. 256,491. 8 Claims. (Cl. 212—55.)

1. A derrick comprising in combination, a mast provided with an opening, a boom mounted in the opening for longitudinal movement with respect to the mast, braking means on the mast and disposed in said opening adapted to releasably hold the boom at any position against longitudinal movement in either direction, and cable operating means for the boom.

1,376,055. MARK-BUOY FOR SEAWAYS. MAURICE VITRAC, Paris, France. Filed Aug. 13, 1919. Serial No. 317,300. 2 Claims. (Cl. 9—8.)

1. A mark buoy comprising in combination a ring float, two planks on one side of said float, means to connect said planks to said float, a pivoted mast on said planks, means connecting said float to a vessel and means to

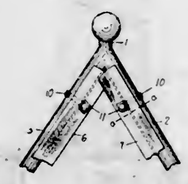


swing said mast into a vertical position when the vessel sinks relatively to said float.

1,376,056. METAL ALLOY. JOHN F. WANDERSEE, Highland Park, ROBERT PERETTO, Detroit, and THEODORE A. L. ALBRECHT, Royal Oak, Mich., assignors to Ford Motor Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 10, 1919. Serial No. 322,865. 7 Claims. (Cl. 75—1.)

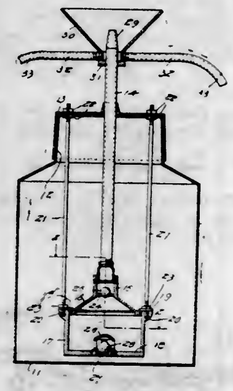
1. Metal alloy, composed of carbon two to five per cent., cobalt thirty-five to sixty-five per cent., chromium and tungsten.

1,376,057. IGNITION. EDGAR T. WARNER, St. Michaels, Md. Filed Jan. 6, 1920. Serial No. 349,758. 1 Claim. (Cl. 123—143.)



A heat retaining ignition member in the form of a plug projecting into the combustion space, the plug operating to ignite the new charge by means of the heat retained from the combustion of the preceding charge, the plug having a passage of small cross-section for cooling fluid, means for regulating the flow of the fluid through the passage, and a chamber with an external opening whereby a heating means may be applied to raise the temperature of the ignition member in starting, the chamber having an intermediate baffle to direct a fluid heat carrying medium in contact with the walls of the heating chamber.

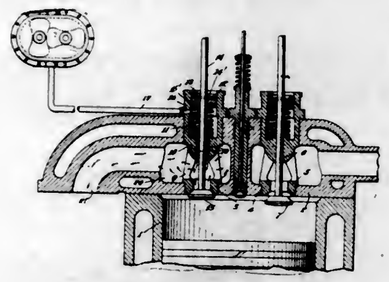
1,376,058. REINFORCING MEANS FOR AUTOMOBILE RADIUS-RODS. OLIVER E. WATSON, Dayton, Ohio. Filed June 5, 1920. Serial No. 386,896. 4 Claims. (Cl. 267—66.)



4. In a device of the type described, the combination with an axle of an automobile, of a V-shaped radius rod

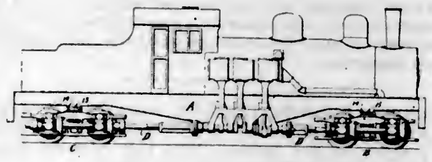
structure, bolts for securing the front ends of said structure to the top portion of said angle, means for connecting the rear ends of a pair of T-irons to the rear part of the forked portion of said radius rod structure, and front

horizontal extensions on said T-irons for connection to the bottom of said axle by the bolts, at a point which allows the front ends of the flange portions of said T-irons to engage the side of the axle for the purpose specified.



1,376,059. DRINKING DEVICE. GEORGE L. WELLER, Elyria, Ohio. Filed Nov. 10, 1919. Serial No. 337,076. 4 Claims. (Cl. 299—8.)

3. The combination with a fluid container or receptacle, having an upper open end, a cover for the upper open end of said receptacle or container having supporting rods depending therein, an upwardly opening cylinder carried by the inner ends of said rods, a piston shiftable vertically in the said cylinder, a hollow piston rod, the inner end of which is secured to the piston and the outer end of which is mounted through the cover, a fountain cup in connection with the external end of the hollow piston rod to catch the discharge therefrom and waste discharge pipes radiating from the said fountain cup and forming handles for the manipulation of the hollow piston rod in use.



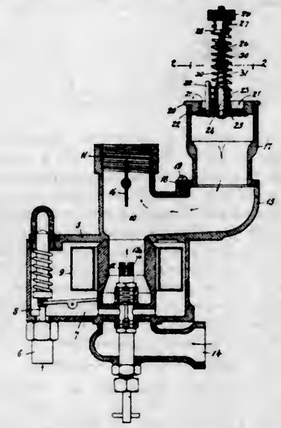
1,376,060. VALVE STRUCTURE FOR INTERNAL-COMBUSTION MOTORS. ALEXANDER WINTON, Lakewood, Ohio. Filed Apr. 25, 1919. Serial No. 292,687. 1 Claim. (Cl. 123—177.)

In an internal combustion motor, a cylinder, a head therefor having an exhaust valve cage opening and an exhaust chamber in communication therewith, an exhaust valve cage mounted therein and comprising a valve seat portion and an air chamber member connected therewith, said air chamber member having a valve stem opening therethrough and a series of air discharge openings surrounding said stem opening, an exhaust valve having a

stem passing through said stem opening, and means for supplying air to said air chamber member.

1,376,061. GEARED LOCOMOTIVE. WILLIAM E. WOODARD, Lima, Ohio. Filed Feb. 2, 1920. Serial No. 355,741. 2 Claims. (Cl. 105—117.)

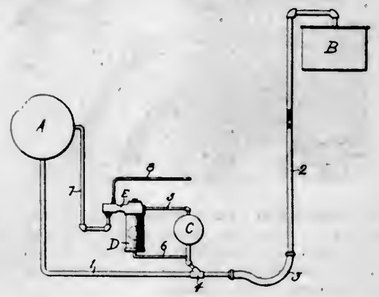
1. A locomotive with power driven trucks and having a frame, said frame being supported by a center pin and side bearings on one truck and a center pin only on another truck.



1,376,062. METAL ALLOY. THEODORE ALBRECHT, Royal Oak, ROBERT PERETTO, Farmington, and JOHN F. WANDERSEE, Highland Park, Mich, assignors to Ford Motor Company of Delaware, Highland Park, Mich., a Corporation of Delaware. Original application filed Sept. 10, 1919, Serial No. 322,865. Divided and this application filed June 7, 1920. Serial No. 386,971. 11 Claims. (Cl. 75—1.)

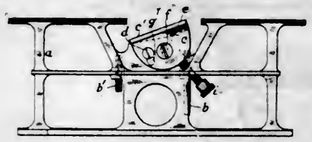
1. Metal alloy composed of chromium from twenty to thirty-five per cent., tungsten from five to twenty per cent., iron from one to fifteen per cent., cobalt and carbon.

1,376,063. AIR-VALVE FOR CARBURETERS. PER AUGUST ANDERSON, New York, N. Y. Filed Jan. 23, 1917. Serial No. 143,944. 1 Claim. (Cl. 251—145.)



The combination of a tubular shell, means at one end of said shell whereby it may be detachably connected with a carbureter, a cap in screw-threaded engagement with the opposite end of said shell, a relatively reduced sleeve extending axially from said cap, the latter having a plurality of air inlets surrounding said sleeve and extending through said cap in an axial direction, a valve seat on said cap, a single valve coöperating with said seat to control all of said air inlets, a slidable stem connected with said valve and extending through and beyond said sleeve, the outer end portion of said stem being screw-threaded, a pair of springs of different tensions surrounding said stem and engaging said cap and sleeve respectively, a screw-threaded member adjustably mounted upon the screw-threaded

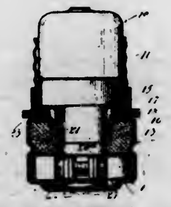
portion of said stem whereby the tension of both springs may be adjusted and a pin carried by said valve and ex-



tending through one of said air inlets and arranged, by contact with the walls thereof to limit the rotative movements of said valve.

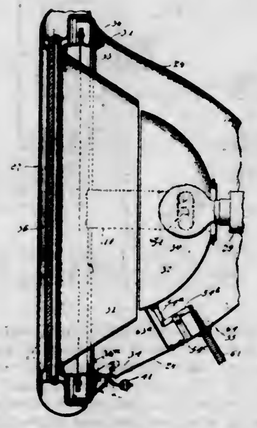
1,376,064. FLUID-PRESSURE-DELIVERY MECHANISM FOR LOCOMOTIVE-FEED-WATER-HEATER SYSTEMS. EARL A. AVERILL, Mount Vernon, N. Y., assignor to Locomotive Feed Water Heater Company, New York, N. Y., a Corporation of Delaware. Filed July 1, 1919. Serial No. 308,042. 8 Claims. (Cl. 103—8.)

7. In combination, a feed water heater, a condensate delivery line from the heater, a connection between the heater and the delivery line in which condensate may accumulate, and means under the control of the accumulated condensate for preventing back flow to the heater.



1,376,065. RAKER-GAGE FOR CROSSCUT-SAWS. AUGUST H. BASTIAN, Hillsdale, Oreg. Filed July 17, 1917. Serial No. 181,157. 2 Claims. (Cl. 33—202.)

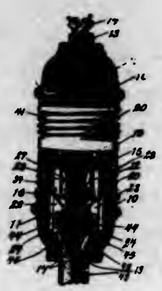
1. In a tool of the character described, a body-piece comprising two lateral edge portions spaced apart and connected by an intermediate web, a gage-plate pivotally mounted on such web and provided with a slot, a clamping screw for the gage-plate located at one side of the axis of rotation of the latter, such clamping-screw being threaded in the web and bearing in said slot, and an adjustable screw having a fine thread engaging in the body-piece, said screw bearing against the rim of said gage-plate, to one side of its axis of rotation and operable to give the gage-plate very slight adjustment about its pivot.



2. In a tool of the character described, a body-piece comprising two lateral edge portions spaced apart and connected by an intermediate web, a gage-plate pivotally mounted on such web and provided with a slot, the pivot bearing in a slot of one of the parts thereby connected, whereby the gage-plate is permitted lineal as well as arcuate adjustment, a clamping screw for the gage-plate located at one side of the axis of rotation of the latter, such clamping screw being threaded in the other part and bearing in said slot, and an adjustable screw having a fine thread engaging in the body-piece, said screw bearing against the rim of said gage-plate, to one side of its axis of rotation and operable to give the gage-plate very slight adjustment.

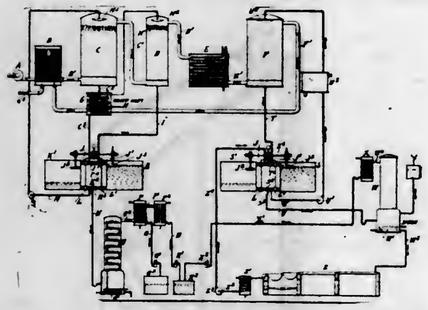
1,376,066. CONDUCTOR-GRIPPING DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 2, 1916. Serial No. 94,861. 3 Claims. (Cl. 173—322.)

2. An electrical connector comprising a wiring terminal; and conductor-gripping means comprising sheet-metal gripping members movable toward and from each other to grip the conductor, and insulating members of sheet-material for lining said sheet-metal gripping members.



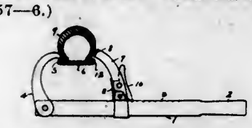
1,376,067. LIGHTING DEVICE FOR AUTOMOBILES. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 17, 1917. Serial No. 191,856. 8 Claims. (Cl. 240—44.)

4. The combination with an automobile of a lighting device comprising two reflecting members, means where-



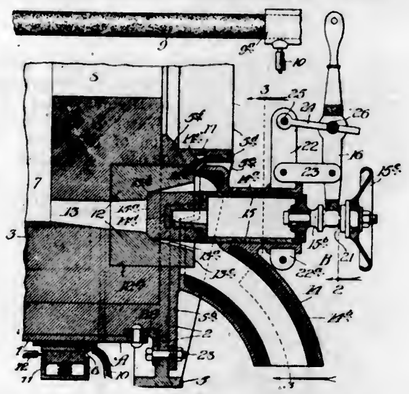
by the turning of the automobile will cause movement of one of said reflecting members, and means controlled by the driver of the vehicle for causing movement of the other reflecting member.

1,376,068. COMBINATION CAP AND SOCKET. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1919. Serial No. 302,408. 2 Claims. (Cl. 173—332.)



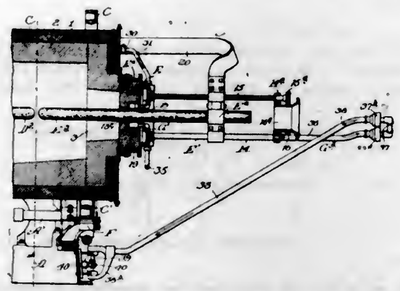
1. In a device of the character described, in combination, a hollow cylindrical housing open at each end, a substantially cylindrical spring contact mounting block fitted in said hollow cylinder, said block being fitted with slots to receive contact springs, means to associate said housing and block in assembled relation, said block being fitted at one end with openings to permit the entrance and exit of contact springs, the other end of said block being tapered and fitted with arcuated slots, said arcuated slots fitting in a neck of said cylindrical housing, the tapered slot arcuated ends of said block and the neck of said housing co-acting to serve as a cord grip for wires adapted to be secured to the contact springs secured to said block.

1,376,069. PROCESS FOR THE RECOVERY OF ALCOHOL AND ETHER FROM ADMIXTURE WITH AIR. EMILE BINDSCHEDLER, Philadelphia, Pa. Filed Aug. 2, 1920. Serial No. 400,586. 6 Claims. (Cl. 252.)



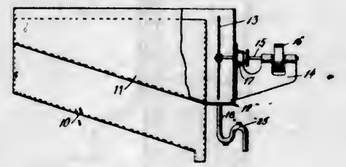
1. The method of recovering alcohol and ether from a mixture of their vapors with air, consisting of first bringing the mixture into intimate contact with water to bring about the absorption of the alcohol, subsequently bringing the air and ether mixture freed from alcohol into intimate contact with concentrated sulfuric acid to bring about the absorption of the ether and separating the alcohol and ether from said absorbents.

1,376,070. TIRE-TOOL. DANIEL M. BOONE, Harrisburg, Tex. Filed Jan. 6, 1920. Serial No. 349,748. 1 Claim. (Cl. 157—6.)



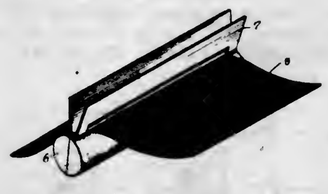
A tool of the character described, including a manual lever, one end of which is formed into a handle and one edge of which is provided with spaced notches, a hook pivoted to the other end of said lever and adapted to be engaged over one of the flanges of an automobile wheel rim, an arcuate push bar slidably mounted on the lever, a push plate formed integrally with the free end of said bar and adapted to rest against one side of the tire to be mounted, a dog pivoted to the push bar and one end of which is formed to engage in one of said notches, a spring attached to the push bar and pressing against the inner side of said dog to hold it in said engagement.

1,376,071. FURNACE. WILLIAM K. BOOTH, Chicago, Ill., assignor to the Booth Electric Furnace Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1919. Serial No. 347,334. 19 Claims. (Cl. 266—42.)



1. The combination with a furnace-body having a wall provided with a discharge passage and surrounding annular valve-seat, of a discharge spout and a valve associated therewith adapted to abut against said valve-seat and effect sealing of the passage.

1,376,072. ELECTRIC FURNACE. WILLIAM K. BOOTH and WILLIAM L. MORRIS, Chicago, Ill., assignors to the Booth Electric Furnace Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1920. Serial No. 372,474. 16 Claims. (Cl. 204—64).

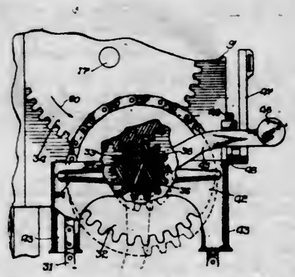


1. In an electric furnace, the combination of a furnace-body provided with a refractory lining, means for supporting said body and rotating it to any desired extent about its axis, electrodes extending through the end walls of said body at its axis of rotation, adjustable electrode supports mounted on the ends of said body and carrying said electrodes, means for supplying current to said electrodes, metal collars for said electrodes in the end walls of said body provided with water passages, and means for circulating water through said collars during rotative movement of the furnace-body about said axis.

1,376,073. FROTH-BREAKING DEVICE. WALTER O. BORCHERDT, Austinville, Va., assignor to the New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 26, 1919. Serial No. 319,967. 10 Claims. (Cl. 259—109.)

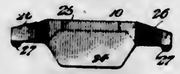
1. In combination with a flotation apparatus, a froth breaking device comprising a disk mounted for rotation about a substantially horizontal axis.

1,376,074. CIGARETTE-FORMING DEVICE. CHARLES S. BRANCH, Hammond, Ind. Filed Aug. 9, 1920. Serial No. 402,306. 2 Claims. (Cl. 131—5.)



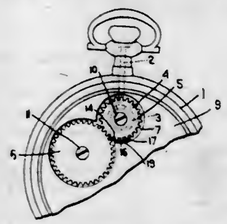
2. A cigarette forming device having two semi-cylindrical parts which are hinged together along their lower edges, and each of which is provided with integral semi-disks at each end, and an integral upwardly extending guide spaced inwardly from the abutting edges of the semi-disks, each of said guides being provided with a longitudinal slot near its lower edge.

1,376,075. CUFF-LINK. RUDOLF BRETTNER, Newark, N. J. Filed June 19, 1919. Serial No. 305,320. 6 Claims. (Cl. 24—102.)



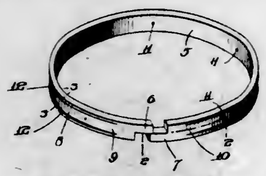
1. In a device of the character described, the combination of a hollow post, a rod therein, having a branch section, a spring adapted to normally press the said rod outward, a link flexibly secured at the base of the hollow post and adapted to detachably engage the branch section of the rod substantially as shown and described.

1,376,076. AUTOMATIC FIRE-SHUTTER. CHARLES H. BUELL, Chicago, Ill., assignor to Variety Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1919. Serial No. 343,319. 5 Claims. (Cl 189—58.)



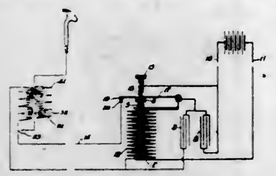
1. In combination, a fire shutter, thermally controlled means for automatically closing said shutter, a chain hoist for manually operating said shutter through eccentrically mounted gears, and thermally controlled means for releasing said eccentrically mounted gears from engagement with said shutter simultaneously with the automatic closure of said shutter.

1,376,077. MACHINE-CLAMP. HARRY CADWALLADER, Jr., Philadelphia, Pa. Filed Mar. 13, 1919. Serial No. 282,453. 2 Claims. (Cl. 90—59.)



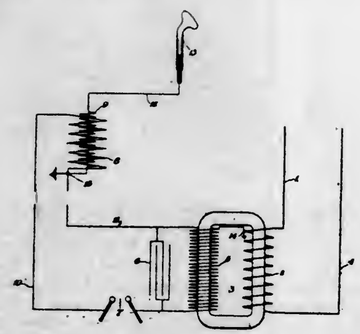
1. In a clamp for machine work, a body part having a longitudinally disposed slot therein, a jaw formed on one end of said body and extending laterally therefrom, a rounded projection formed on one side of said jaw to contact with work to be clamped, a pair of flanges formed respectively at opposite edges of said body and extending in the same direction as said rounded projection, said flanges having a depth greater than the thickness of said jaw and respectively merging into one face of said jaw, and means between said flanges and traversing said slot for clamping said body and jaw to hold said work.

1,376,078. RECOIL-PAWL. KNUT S. CARLSTROM, Waltham, Mass., assignor of one-half to Joseph H. Studholme, Waltham, Mass. Filed June 8, 1918. Serial No. 238,888. 1 Claim. (Cl. 58—86.)



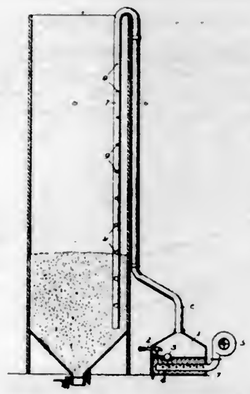
In a watch, the combination with a plate having a crown-wheel-receiving recess, of a crown wheel rotatably mounted in the recess, a ratchet wheel meshing with the crown wheel, a stop member interposed between the crown wheel and the bottom of the recess and having sufficient frictional engagement with the crown wheel to be turned thereby as the wheel rotates, said stop member permitting free rotation of said wheel in a forward direction, and being provided with an arm situated to be carried into engagement with the intermeshing teeth of said wheels at their point of intermeshing by a backward rotation of the crown wheel.

1,376,079. PISTON-RING. LEMUEL T. COOPER, Philadelphia, Pa. Filed June 26, 1917. Serial No. 176,952. 1 Claim. (Cl. 74—109.)



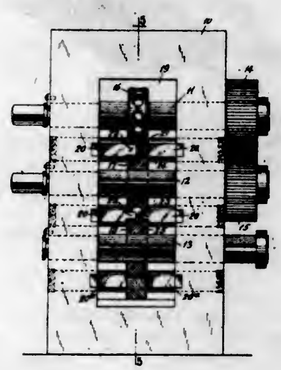
A piston packing comprising a split ring with ends recessed to form an overlapping joint, and provided with a single relatively shallow continuous peripheral channel terminating at points adjacent the two ends, said channel extending across the greater portion of the width of the ring and flanked by comparatively narrow flanges, the peripheral surface of the flanges and of the overlapping ends being flush, said ring also provided with a plurality of apertures extending from the bottom of the channel to the inner surface of the ring, said apertures having such aggregate area, relative to the clearance, as to secure a pressure equilibrium on both sides of the ring.

1,376,080. HIGH-FREQUENCY MACHINE. CHARLES W. DE MOOY, Cleveland, Ohio, assignor to The De Mooy Electric Co., Cleveland, Ohio. Filed Aug. 20, 1917. Serial No. 187,272. 5 Claims. (Cl. 250—36.)



1. A high frequency machine comprising in electrical circuit; a source of current, an induction coil including primary and secondary windings, an armature, a condenser connected with each of said windings, and a device including a secondary spark gap controlled by the movement of said armature for delivering high frequency discharges.

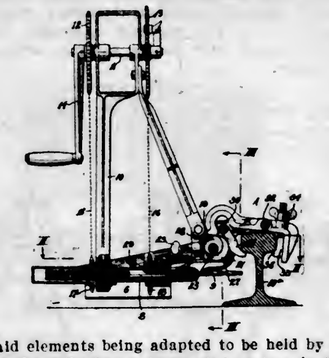
1,376,081. HIGH-FREQUENCY GENERATOR OF THE TRANSFORMER TYPE. CHARLES W. DE MOOY, Cleveland, Ohio, assignor to The De Mooy Electric Co., Cleveland, Ohio. Filed Aug. 20, 1917. Serial No. 187,273. 1 Claim. (Cl. 250—36.)



A high frequency machine of the transformer type for alternating current usage, comprising in electrical circuit; a transformer having grounded primary and secondary windings, a condenser, an induction coil also having grounded primary and secondary windings, and a flexible insulated cord connecting said induction coil with the other parts for the purpose specified.

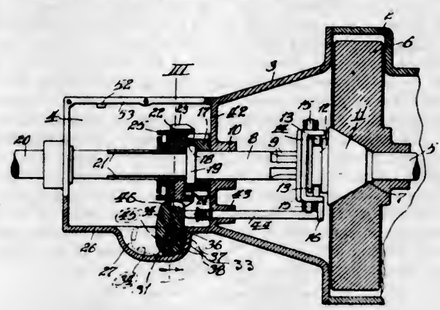
1,376,082. METHOD OF PREVENTING EXPLOSIONS. ROWAN T. F. DODDS, Stratford, Ontario, Canada. Filed May 10, 1920. Serial No. 380,203. 8 Claims. (Cl. 98—26.)

6. The method of preventing explosions in grain elevators, comprising supplying additional water vapor to the interior of said elevators during the filling thereof, said water vapor being automatically supplied at progressively higher levels as the bins become filled, to maintain an effective stabilizing minimum of moisture therein at all times, substantially as described.



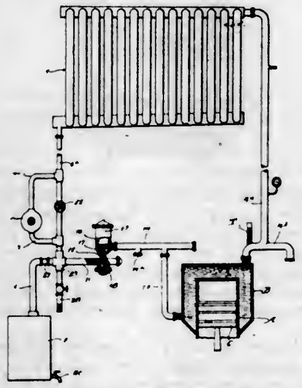
1,376,083. APPARATUS FOR ORNAMENTING LEAD. GEORGE DURHAN, New York, N. Y. Filed May 13, 1919. Serial No. 296,859. 1 Claim. (Cl. 80—30.)

An apparatus of the kind described comprising a frame, a pressure wheel, the peripheral surface of which is arranged to displace the lead into predetermined ornamental form, a pair of jaws extending into engagement with opposite surfaces of said wheel and a pair of tongues extending from said jaws inwardly beyond said wheel surfaces to resist the pressure of said wheel.



1,376,084. DRILLING-MACHINE. WALTER C. DYER, Chicago, Ill., assignor to The Buda Company, a Corporation of Illinois. Filed Jan. 23, 1919. Serial No. 272,619. 6 Claims. (Cl. 77—9.)

1. In a rail drilling machine, the combination of a frame, an outer rail gripping element pivoted to the frame, an inner rail gripping element pivoted to said frame, and a common means for operating said gripping elements,



both of said elements being adapted to be held by gravity away from the rail when not operated on to grip the rail.

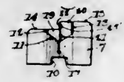
1,376,085. LOCKING DEVICE FOR VEHICLES. CLINTON C. EPPS, Bristow, Okla. Filed May 5, 1919. Serial No. 294,736. 8 Claims. (Cl. 70—126.)

2. In a locking device, the combination of a transmission gear, a clutch, a member for engagement with the teeth of said gear, means for locking said member in its operative position and means coöperable with said member and said clutch whereby said clutch is prevented from being withdrawn from clutching engagement.

1,376,086. AUTOMATIC COOLING SYSTEM. MILTON D. M. FAIRMAN, South Brownsville, Pa. Filed Jan. 17, 1920. Serial No. 352,099. 3 Claims. (Cl. 123—170.)

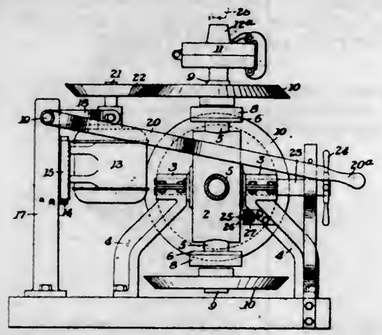
1. In a cooling system, a cylinder, a jacket surrounding said cylinder, a condenser, a vapor pipe communicating with said jacket and with the inlet of the condenser for conveying a vaporized cooling liquid to said condenser, a return pipe communicating with the outlet of the condenser and with the jacket, a pressure fluid operated motor, and means for optionally by-passing the liquid from the return pipe through said motor.

1,376,087. EDUCATIONAL FURNITURE TOY. HELEN M. FLIEDNER, Cleveland, Ohio. Filed June 6, 1919. Serial No. 302,130. 35 Claims. (Cl. 46—37.)



1. An educational furniture toy composed of a single sheet of foldable material of predetermined shape depending upon the article of furniture intended to be produced, said sheet being fashioned with slits, and a plurality of definitely spaced creases extending between different slits respectively whereby double ply legs may be obtained by folding along said creases.

1,376,088. DISPENSING-NOZZLE FOR BOTTLING-MACHINES. WILLIAM M. FOWLER, Sound Beach, Conn. Filed June 23, 1920. Serial No. 391,115. 10 Claims. (Cl. 221—80.)

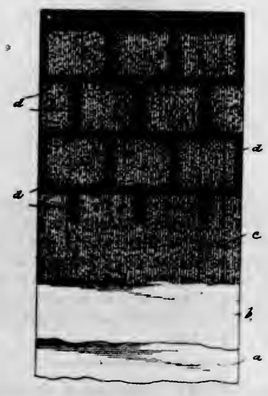


1. A dispensing nozzle including a casing having an inlet and an outlet, a barrel slidable in said casing, stops carried by the barrel for limiting its downward and upward movements, a reciprocating plunger within the barrel and a frictional connection between the plunger and barrel whereby the plunger is first movable with and then along the barrel in both directions to control the admission and discharge of the fluid.

1,376,089. GUN-SIGHT. HERMAN R. FRENSDORF, Kimberly, Wis. Filed Sept. 9, 1918. Serial No. 253,231. 4 Claims. (Cl. 33—47.)

1. A gun sight having a V-notch and inwardly beveled portions on the rear side of the sight defining a center line meeting the apex of the notch.

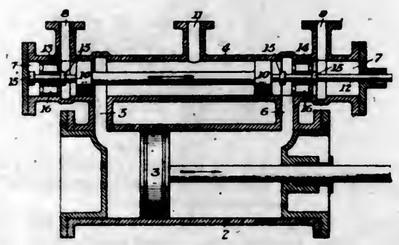
1,376,090. DIE-CASTING APPARATUS. JOHN L. GRABER, Pittsburgh, Pa. Filed Dec. 27, 1919. Serial No. 347,792. 3 Claims. (Cl. 22—65.)



1. Die-casting apparatus, comprising a head or turret mounted for rotation about a horizontal axis, a plurality of mold carriers on said head or turret, each of said carriers having means whereby it may be rotated and also having a socket member, and a plurality of molds, each of said molds having a projecting portion or stem adapted for removable rotative engagement with one of said socket members, substantially as described.

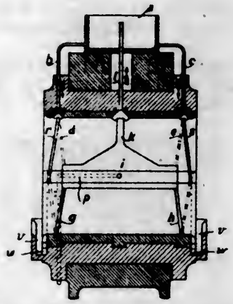
1,376,091. REFRACTORY MATERIAL. MINER L. HARTMANN, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed May 17, 1920. Serial No. 381,955. 4 Claims. (Cl. 106—11.)

1. A refractory article containing carborundum and a bonding material containing mixtures of zirconium and aluminum silicates.



1,376,092. WATERPROOF COVERING AND PROCESS OF MAKING SAME. OTTO A. HEPPES, Chicago, Ill. Filed Apr. 19, 1919. Serial No. 291,302. 3 Claims. (Cl. 91—67.9.)

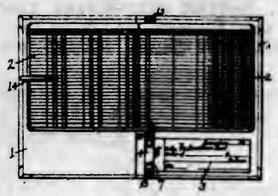
1. A waterproofing element consisting of a saturated backing sheet having an adhesive coating, a granular facing of a predetermined color applied over the entire area of said adhesive coating so as to effectively cover the same and be partially embedded therein and a second granular facing of a different color than the first applied to predetermined areas of said facing and partially embedded in the coating, said second facing contacting with and filling the interstices between first granular facing.



2. A process of making prepared water proofing elements consisting in applying adhesive coating to a backing length, entirely covering said adhesive coating with a granular facing of predetermined color, partially embedded in said coating and then applying a granular facing of a different color than the first to predetermined areas of the sheet and partially embedding said second granular facing in said coating without, however, exposing the latter.

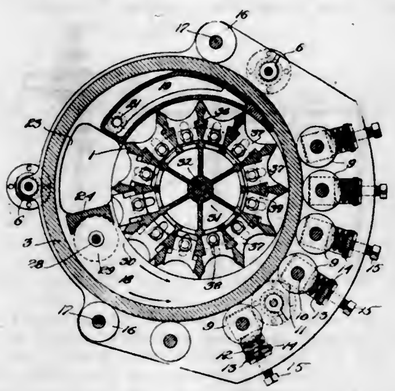
1,376,093. STEAM-ENGINE VALVE. ERNEST H. HOLMES, Point Pleasant, W. Va. Filed July 21, 1919. Serial No. 312,140. 4 Claims. (Cl. 121—135.)

1. The combination with a steam engine cylinder and its valve chest, the latter having an extension chamber at each end provided with an exhaust port, said ports constituting the only means of escape for the exhaust from the cylinder, and the cylinder having a combined inlet and exhaust port at each end portion thereof communicating with the valve chest and with one of said chambers, of a mechanically actuated piston valve for controlling the said ports, said valve consisting of a main portion rigidly connected to its valve stem, and two auxiliary valves arranged to open and close the said exhaust ports from the extension chamber, said valves being loosely mounted on said stem and arranged to have negative lap when closing and positive lap when opening their respective ports, substantially as described.



1,376,094. MEANS FOR LUBRICATING BEARINGS. WILHELM HOLTORF, Hamburg, Germany. Filed Nov. 9, 1916, Serial No. 130,341. Renewed Dec. 2, 1919. Serial No. 342,012. 4 Claims. (Cl. 64—24.)

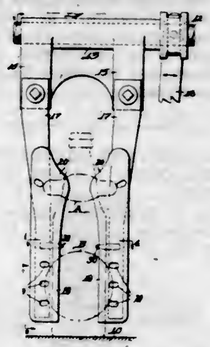
1. A lubricating bearing comprising a bushing having a pair of outer grooves and an inner groove, a pair of receptacles located in the indifferent zones of said bushing opposite each other, one of said receptacles communicating with the outer grooves, while the other receptacle communicates with the inner groove, an oil cup, and pipes that connect said oil cup with said outer grooves and inner groove.



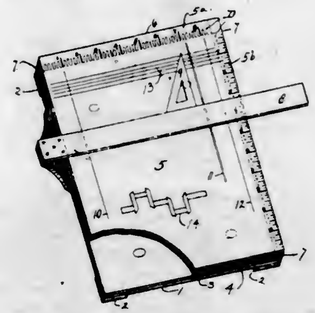
3. In a bearing having an oil cup on either side below the shaft, a groove running around the shaft, an ascending groove having a rounded edge on one side and ascending from the lowest part of the circular groove up to the shaft.

1,376,095. BANK-CHECK, RECORD-BOOK, AND BINDER. MORTIMER A. HOWE, Tacoma, Wash. assignor to Pioneer Bindery and Printing Company, Tacoma, Wash., a Corporation. Filed Aug. 9, 1920. Serial No. 402,095. 2 Claims. (Cl. 281—17.)

1. An office check and record book, comprising a book of checks or the like, formed of a multiple of checks or pad of checks, a record-book to contain the record of checks and bound in a flexible cover, and a binder having an upset metallic strip fixed at its middle to receive the rear cover of said record-book, a book-mark clamp at the outer edge of the binder to hold the front cover and leaves of said record-book and so operate as to secure the rear cover within said metallic strip at the middle of said binder, the binder extending beyond the record-book to form a base for the body of checks, and means for detachably securing the pad of checks on said extended part of said binder.



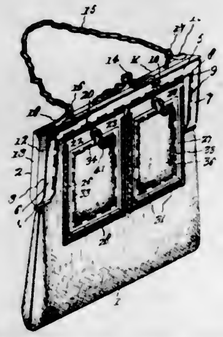
1,376,096. MACHINE FOR MAKING BRIQUETS. CHARLES D. JENKINS, Boston, Mass. Filed May 1, 1915. Serial No. 25,135. 4 Claims. (Cl. 25—75.)



2. A machine of the character described comprising a pair of rotatable members consisting of a ring, a wheel, eccentrically arranged within the ring, one of said members provided upon its periphery with molding pockets, and a heated shoe within the crescent-shaped chamber between said members, along which the molded material is carried by rotation of said members.

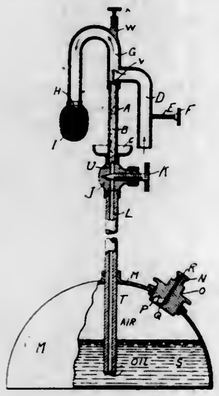
1,376,097. LABEL-PICKING DEVICE. JOHN EMANUEL JOHNSON and CHARLES H. OSLUND, Worcester, Mass., assignors to The O. & J. Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 21, 1919. Serial No. 283,968. 7 Claims. (Cl. 216—13.)

1. The combination with a label picker support, of a shaft thereon parallel therewith, means for supporting an article to be labeled in position parallel with said shaft and adjacent thereto, a label picker carried by said shaft and adapted to swing thereon independently of said support, said support being of channel form, a spring connected with said picker, and means extending through said support to the rear side thereof and along the same for normally swinging the picker into operative position.



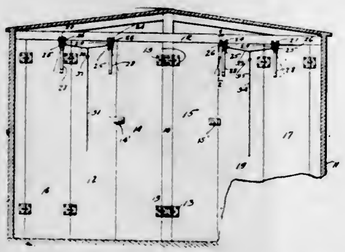
1,376,098. DRAWING-PAD DEVICE. HENRY P. JONES, Buffalo, N. Y. Filed Aug. 25, 1920. Serial No. 405,854. 3 Claims. (Cl. 283—45.)

1. A drawing pad comprising a plurality of sheets cut to rectangular shape and glued together at one edge thereof and a marginal strip to each sheet divided from the same by a weakened line whereby said strip may be easily torn from the body of the sheet, and a series of equally spaced divisions marked lengthwise on said strip.



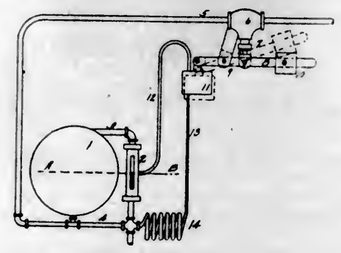
1,376,099. LADY'S HANDBAG. MAX KAUFMAN, Brooklyn, N. Y. Filed July 31, 1920. Serial No. 400,403. 2 Claims. (Cl. 150—34.)

1. A lady's hand bag comprising a main frame openable at its top, a bag body secured to the main frame, a supple-



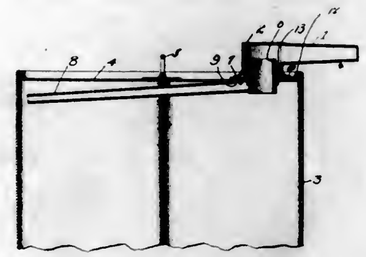
mental frame hinged at its top to the side of said main frame, a closure frame hinged at its lower end to the lower end of the supplemental frame and adapted to be swung upwardly thereagainst to provide a receptacle, and independent fastening means for said main and closure frames arranged at the tops thereof, whereby ready and independent access may be had to the interior of the bag body and the receptacle.

1,376,100. PROCESS FOR GENERATING AND UTILIZING HYDROCARBON VAPORS OR GASES. JAMES PICKERING KENDALL, New York, N. Y., assignor, by mesne assignments, to Kendallite Company, Inc., New York, N. Y., a Corporation. Filed Mar. 14, 1918. Serial No. 222,432. 3 Claims. (Cl. 48—197.)



1. The process of preventing accumulation of carbon deposits in hydrocarbon vapor generators for intermittently operated burners, which consists in heating a generator containing barium oxid in the presence of air to such a temperature as to form barium peroxid, delivering thereto a hydrocarbon liquid containing an oxidizing agent thereby producing hydrocarbon vapor and further converting the barium oxid to barium peroxid, and burning the vapor outside of the generator to thereby heat the generator to a higher temperature and continue the production of vapor, and to reconvert barium peroxid to barium oxid with liberation of oxygen at high temperature and oxidation of any deposited carbon, the barium oxid being partially reconverted to barium peroxid during the cooling following the shutting off of hydrocarbon from the generator.

1,376,101. DOOR-CATCH. EDISON B. KINSEY and ALBERT KINSEY, Prairie Depot, Ohio. Filed Dec. 22, 1919. Serial No. 346,696. 1 Claim. (Cl. 292—50.)



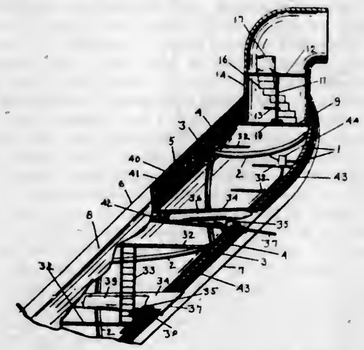
A swinging gravity latch comprising a plate having one end extending at right angles to the body thereof and formed with a longitudinal slot, a keeper, and a vertical weighted bar pivotally supported on the said plate with its upper end disposed through said slot for sliding movement, and an apertured lug secured to the weighted bar and extending from one edge thereof.

1,376,102. BOILER FEED-WATER REGULATOR. DAVID R. KNAPP, Pottsville, Pa. Filed Apr. 10, 1920. Serial No. 372,919. 2 Claims. (Cl. 137—101.)

1. In a feed water regulator of the character described for a steam boiler, a valve in the feed line, a weight adapted to operate the valve in one direction, a receptacle operatively connected to the valve to operate it in the opposite direction, said receptacle being in communication with the boiler at and below the water level and a cooling coil inserted in the communicating line that is below the water level, substantially as described.

1,376,103. DISPENSING CAN OR RECEPTACLE. FRANK J. KROGMANN, Eureka, Calif. Filed Mar. 16, 1920. Serial No. 366,289. 1 Claim. (Cl. 221—28.)

In a device of the class described, the combination with a body provided with a top, of a sleeve carried by said top, said top provided with a vent opening near the sleeve, a cap provided at one side with a funnel-like spout, said cap being outwardly flared at its lower end, a broad rubber washer placed against the lower flared end of the cap, means fastening said flared end to said washer, said washer engaging the outer face of the sleeve, and an internally threaded sleeve within the cap and engaging at its lower end the inner face of the rubber washer and being threaded upon the first-mentioned sleeve, substantially as shown and described.

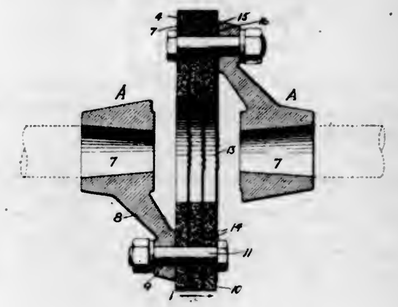


1,376,104. SPRINKLER-HEAD. GUNNAR O. LILJEGREN, Chicago, Ill., assignor to The Viking Corporation, Hastings, Mich., a Corporation of Michigan. Filed Feb. 24, 1920. Serial No. 360,611. 2 Claims. (Cl. 169—42.)

2. A fusible link for connecting the members of a strut and consisting of a pair of duplicate plates united by fusible material, each plate having a marginal slot at the central portion of one of its ends, a hole near its other end and a central arcuate tongue extending from the inner end of its hole through the slot of the companion plate to provide anchors for solder blocks, the upper and lower portions of each plate being offset and

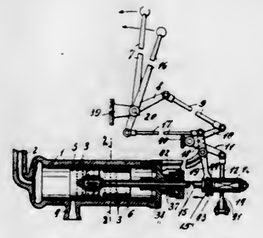
connected by an oblique transverse web at its center which abuts with the opposed web when the plates are assembled, recesses in the oblique webs forming seats, and balls in the seats.

1,376,105. SUBMARINE DESTROYER. CARL J. LINDQUIST, New York, N. Y., assignor of one-half to Paul C. Hayes, Toledo, Ohio. Filed Jan. 28, 1916, Serial No. 74,750. Renewed Feb. 12, 1921. Serial No. 444,538. 12 Claims. (Cl. 114—17.)



1. A vessel having a normally floating stern in surface travel, the remainder of the vessel being submerged, a stabilizing rib extending from the prow to the stern, and a propeller at the prow.

1,376,106. METHOD OF AND APPARATUS FOR HEAT-TREATING STRUCTURAL MEMBERS. ANGUS S. MACDONALD, Great Neck Station, N. Y., and HARRY P. MACDONALD, Montclair, N. J., assignors to The Snead & Co. Iron Works, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 18, 1918. Serial No. 229,241. 9 Claims. (Cl. 266—4.)

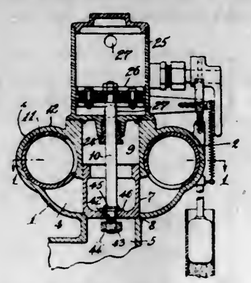


1. A combined heating and quenching apparatus for the heat treatment of metallic objects, comprising in combination means for supporting the article, means for heating the article by its internal resistance to the passage of a current of electricity therethrough, and means whereby a quenching medium may be applied to the article *in situ*.

1,376,107. FLEXIBLE JOINT. HARRY P. MACDONALD, Montclair, N. J., assignor to The Snead & Co. Iron Works, Jersey City, N. J., a Corporation of New Jersey. Filed May 17, 1919. Serial No. 297,779. 13 Claims. (Cl. 64—96.)

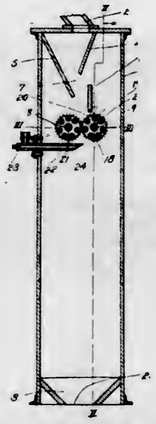
1. A flexible joint of the character described comprising in combination a pair of opposed members, flexible disk like means coupling said members, and means forming part of the disk preventing said members from rotating out of their true centers and sufficiently elastic to take care of angularity or end motion in the joint.

1,376,108. ROAD-SPRINKLER. HEINRICH MAYER, GUSTAV SCHLATTER, and ADOLF BALTENSWEILER, Arbon, Switzerland, assignors to Firm of Adolph Saurer, Arbon, Switzerland. Filed July 22, 1916. Serial No. 110,700. 7 Claims. (Cl. 299—108).



7. In a road sprinkler, a head having means for the supply of water thereto and provided with a washing spray port at the bottom and with perforations at one side, and single means for covering and uncovering said port and perforations.

1,376,109. VALVE MECHANISM. ERNEST W. MILLER, Cincinnati, Ohio, assignor to the American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 2, 1916. Serial No. 134,618. 9 Claims. (Cl. 277—55.)

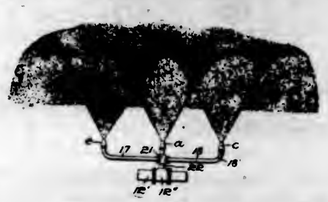


1. Valve mechanism, comprising a valve casing provided with a mixing chamber and with communication to two separate liquid supplies, two parallel cylindrical hollow valves rotatable in said casing, each valve at one end

being open to one of said supplies and provided with a lateral port adapted to be moved into and out of regis-

tration with an opening to said chamber, and means for operating said valves.

1,376,110. DEVICE FOR AERATING AND MATURING FLOUR. WILLIAM G. MILLER, deceased, by Minnie Miller, administratrix, Kansas City, Mo., assignor to Clarence M. Hardenbergh, Henry Vilm, Paul Pandemalvy, and Minnie Miller, Kansas City, Mo. Filed Aug. 25, 1919. Serial No. 319,741. 2 Claims. (Cl. 83—42.)

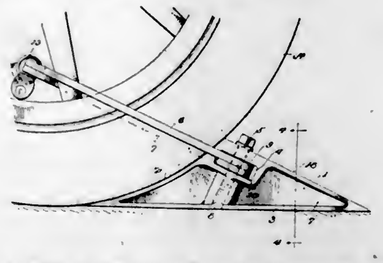


2. A flour stream subdividing roll comprising disk-shaped heads of rubber, spaced rods arranged equi-distantly about the axes of the head and connecting said heads, and rubber spacing sleeves on the rods between the heads.

1,376,111. SHOE-RACK. EDWARD F. O'BRIEN, Somerville, Mass. Filed June 19, 1919. Serial No. 305,380. 1 Claim. (Cl. 211—14.)

In a shoe rack, the combination with uprights, of shelves supported thereby and comprising bars extending longitudinally thereof, said bars having portions of reduced diameter, and brace elements extending transversely of the shelf, each brace element comprising an upper and a lower brace member between which said bars extend and which are provided with recesses to receive the necked portions of said bars, and means to clamp said brace members together.

1,376,112. METHOD OF SPRAYING WATER IN COOLING-PONDS. LEE H. PARKER, Boston, Mass., assignor to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Feb. 5, 1916, Serial No. 76,297. Divided and this application filed Jan. 4, 1917. Serial No. 140,635. 7 Claims. (Cl. 62—177.)



1. That method of cooling the water of cooling ponds which comprises discharging the water to be cooled from points adjacent to the surface of the pond, in substantially vertically directed jets arranged in longitudinally extending, parallel rows of groups along parallel lines of suppy; providing in each group a plurality of such substantially vertically directed jets arranged in rectangular series along the line of supply to the jets of each row; maintaining the said jets of each group at substantial equidistance from each other and at such distance that taken with their substantially vertical direction they impinge upon each other only at a relatively great height above the surface of the pond and after material cooling of the drops of the jets has been effected; maintaining the jets of each group at the same distance from each other that a transversely arranged pair thereof are from the nearest transversely arranged pair of jets of the next adjacent group, whereby the air is permitted to circulate freely parallel to the surface of the pond across the line of supply of each row of groups and also upwardly between the groups of each row; and maintaining a wider spacing between the jets of adjacent rows of groups than between the jets of the groups of the same row of groups, whereby free circulation of air is permitted longitudinally of and between adjacent rows of groups.

1,376,113. METHOD OF PRODUCING FERRO-SILICO-MAGNESIUM ALLOY. GUSTAV PISTOR, Frankfort-on-the-Main, and ALBERT BEIELSTEIN and ADOLF BECK, Bitterfeld, Germany, assignors to the Firm of Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 11, 1916. Serial No. 130,908. Renewed Feb. 7, 1921. Serial No. 443,222. 1 Claim. (Cl. 75—1.)

The method of producing an alloy containing magnesium for use as a deoxidizing agent for iron and cast steel consisting in melting ferro-silicon to a semi-fluid state and adding magnesium thereto while in said state.

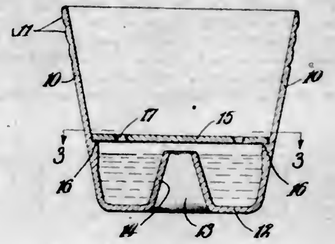
1,376,114. VEHICLE-WHEEL LOCK. JAMES LEWIS RANEY, Cleveland, Ohio. Filed Mar. 2, 1920. Serial No. 362,796. 2 Claims. (Cl. 70—90.)

2. A device for the purpose set forth comprising a substantially triangular block having a flat base to rest upon

the ground and having a longitudinally extending convex face to engage a wheel, the block being provided with a chamber opening through its lateral faces, a pivot permanently secured in the block and extending through the said chamber, and wheel-embracing arms mounted upon said pivot.

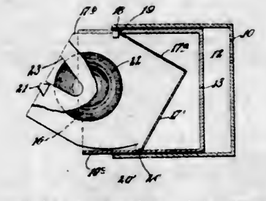
1,376,115. ATTACHMENT FOR PENCILS OR PENS. ADAM F. RECORD, Kokomo, Ind. Filed Oct. 5, 1920. Serial No. 414,807. 4 Claims. (Cl. 120—103.)

1. An attachment for pencils and the like comprising a reversible sleeve having each end forming a feather edge and having an annular enlargement, there being concave annular surfaces diverging inwardly from the annular enlargement, that portion of the sleeve between its center and one end being a duplicate of the other half of the sleeve.



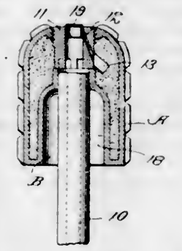
1,376,116. CALENDAR AND CARD HANGING DEVICE. OSCAR REGEN and JAMES CASTELLE, New York, N. Y. Filed Nov. 13, 1920. Serial No. 423,931. 1 Claim. (Cl. 40—119.)

A flexible hanger for calendars and cards with a single perforation, having central and side loops, of which the central loop is extended rearwardly through the single perforation of a calendar or card and is provided with a knot at the rear of the calendar or card to prevent accidental displacement and means connecting the side loops and preventing passage thereof through the perforation.



1,376,117. FLOWERPOT. FERDINAND SANDOR, Theresa, Saskatchewan, Canada. Filed Mar. 30, 1920. Serial No. 369,996. 2 Claims. (Cl. 47—19.)

2. A flower pot having an integral bottom, formed with a central opening, an upwardly projecting flange of frusto-conical shape surrounding said opening, a series of lugs projecting inwardly from the sides of the pot, and a disk freely supported on said lugs, said disk having a series

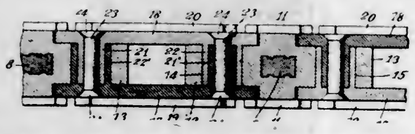


of apertures formed therein and registering with the annular space surrounding said flange.

1,376,118. FILING-CASE FOR TALKING-MACHINE RECORDS. GEORGE SCHLEMMER, New York, N. Y. Filed Mar. 17, 1920. Serial No. 366,464. 1 Claim. (Cl. 211—16.)

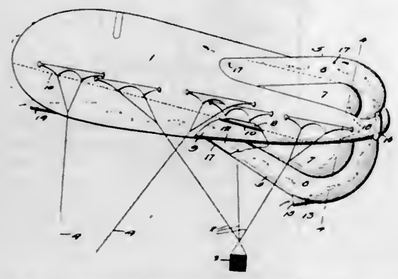
A case containing a plurality of juxtaposed cells for talking machine records, a series of wrappers in each of said cells, projecting lugs on one edge of said wrappers at a point between opposite ends of said edge, the adjacent interior wall of said casing having a groove into which said lugs project, two of the corners of said wrappers being sheared off to permit of swinging movement of the said wrapper around the said lug.

1,376,119. RIFLE-GRENADE. CREEDY C. SHEPPARD, Bridgeport, Conn., assignor to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed July 11, 1917. Serial No. 179,793. 6 Claims. (Cl. 102—29.)



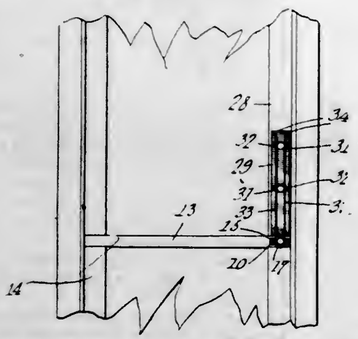
1. A rifle grenade comprising a body adapted to be supported directly on and projected from a rifle barrel and having an opening therethrough for permitting the passage of a bullet and receiving a rifle barrel, and means within said opening in advance of an inserted rifle barrel for receiving and holding the propelling gas after the passage of a bullet completely through the opening in the body.

1,376,120. CUTTING-CHAIN. FINIS SMITH, Georgetown, Ill. Filed July 9, 1919. Serial No. 309,665. 2 Claims. (Cl. 262—33.)



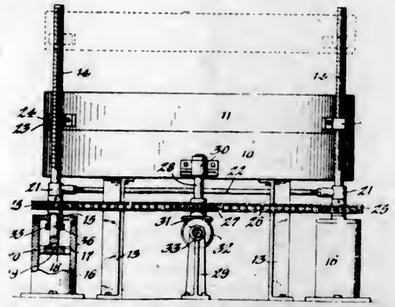
1. A chain for coal cutting machines comprising in combination, alternately arranged cutter links and connecting links, said connecting links being composed of two straps, each strap having tubular lugs of even diameter

throughout their length integrally formed on their opposite ends, the lugs at each end of the link telescoping on each other throughout their entire length so that the inner one form a bearing for the outer extending across the entire space between said straps to the plane of the inner face of the opposite strap, a rivet passing through suitable counter-sunk apertures in each end of said links and through said inner tubular lugs adapted to hold the several parts of said link against relative transverse move-



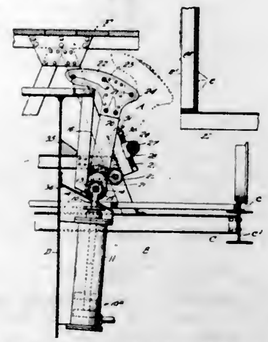
ment, said cutter links having lugs fitting snugly between the straps of said connecting links and around the outer lugs thereof, so as to prevent the transverse deflection of said cutter links, and outwardly extending guide flanges formed on each side of said links.

1,376,121. KITE, CAPTIVE, OR OBSERVATION BALLOON. CHARLES F. SMYTH, New Haven, Conn., assignor to Connecticut Aircraft Company, New Haven, Conn., a Corporation of Connecticut. Filed Oct. 4, 1919. Serial No. 328,419. 7 Claims. (Cl. 244—4.)



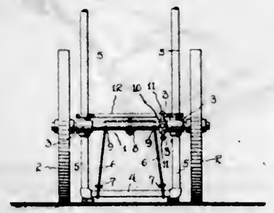
1. A kite, captive or observation balloon comprising a gas-bag having stabilizing means upon the tail portion thereof, said stabilizing means including a protuberance having separate and independent fluid containing compartments, one of said compartments being in communication with the atmosphere for inflation by wind pressure and the other of said compartments being in communication with the gas containing space of the gas-bag for inflation by gas therefrom.

1,376,122. WINDOW-FASTENER. ELMO SONGEY, Asheville, N. C. Filed May 19, 1920. Serial No. 382,585. 1 Claim. (Cl. 292—57.)



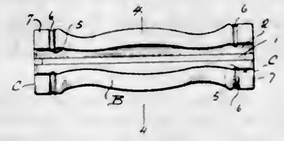
A window fastener comprising a keeper plate adapted to be secured to the inner face of the side rail of the upper sash of a window adjacent to the meeting or parting rail thereof and provided with a series of vertically spaced apertures therethrough, said side rail having sockets alined with said apertures, walls arranged at either side of said apertures and a spring bolt carried by the top rail of the lower sash adapted to be guided between said walls for engagement with said apertures and sockets, said bolt comprising a casing adapted to be mounted in the upper rail of the lower sash in alinement with said apertures, said bolt having a shank portion provided with a radially projecting lug and said casing having inner and outer walls, the outer wall being provided with a recess to receive said lug therethrough for contact against the front portion of the casing, whereby said bolt may be held retracted against the action of its spring, said bolt having an enlargement on its upper end forming a shoulder, a spring on the bolt between the front wall thereof and said shoulder for normally projecting the bolt to engage said apertures and sockets, said bolt having a knurled operating head, and means coöperating between the spring and bolt for adusting the tension of the spring.

1,376,123. TIRE-MOLDING APPARATUS. CHARLES W. STICKEL, Rochester, N. Y., assignor to Good Luck Tire & Rubber Co., Buffalo, N. Y., a Corporation of Arizona. Filed July 2, 1920. Serial No. 393,505. 3 Claims. (Cl. 18—17.)



1. In an apparatus of the character described, the combination of a stationary lower mold section, an upper mold section movable relatively to said lower mold section, and means for raising and lowering said upper mold section relatively to said lower mold section comprising bearing supports, vertical screw rods journaled in said supports, screw nuts arranged on said upper mold section and engaging with said screws, sprocket wheels mounted on the latter, a sprocket chain connected to said sprocket wheels, and means for transmitting motion to said chain.

1,376,124. DEVICE FOR REMOVING THE CLOSURE-BOARDS OF GRAIN-CAR DOORS. HARRY R. WAIT, Buffalo, N. Y. Filed Jan. 9, 1920. Serial No. 350,482. 15 Claims. (Cl. 254—93.)

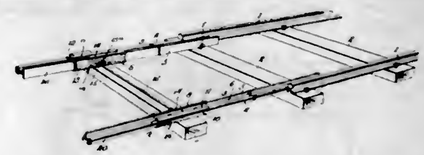


1. In a device for removing grain car door boards, the combination with a door board removing shoe, of means for swinging said shoe into car door engaging position and rocking said shoe to force said boards from said door.

1,376,125. DEVICE FOR POSITIONING APPARATUS AND THE LIKE. JESSE L. WENTZ, Passaic, N. J., assignor to Portable Machinery Company, Inc., Clifton, N. J., a Corporation of New Jersey. Filed Jan. 12, 1920. Serial No. 350,860. 4 Claims. (Cl. 254—166.)

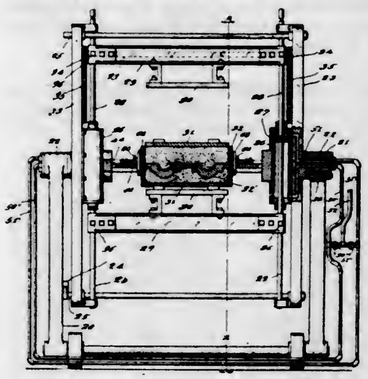
1. In a device of the character described the combination of a rotatable axle, traction wheels thereon, adjustable supporting rods secured to the axle, a connecting medium between the axle and the supporting rods, and means for winding the connecting medium on the axle to position the supporting rods.

1,376,126. HAND-GRASP. ELSIE WILLETT, Alberton, Mont. Filed July 26, 1920. Serial No. 398,940. 3 Claims. (Cl. 224—57.)



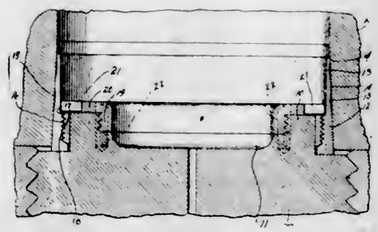
1. As a new article of manufacture, a hand grasp comprising an elongated tubular body having a longitudinally disposed slot in communication with the bore thereof, a plug snugly fitting within the slot, caps rotatably supported by the end portions of the body, each of said caps being provided with a cut-away portion adapted to register and substantially coincide with adjacent ends of the bore and slot of the body when the cap is in one position, and a plate carried by each end portion of the body and snugly fitting within the cut-away portions of the caps when said caps are in a second position to hold the caps against rotation.

1,376,127. SIGNALING DEVICE. HARRY M. WILLIAMS, Little Rock, Ark., assignor of one-half to John E. Coates, Little Rock, Ark. Filed June 19, 1919. Serial No. 305,291. 4 Claims. (Cl. 116—173.)



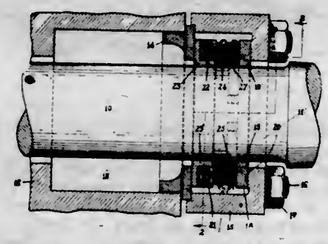
1. A signaling device comprising a plurality of tubular containers, one of said containers being provided with a longitudinally-disposed slot, interchangeable closures for the ends of said containers, flag staffs fixed to said closures, and signal flags on said staffs, substantially as described.

1,376,128. SLIDE-RAIL HOLDER. JAMES EDWARD WILSON, Eldorado, Ill. Filed May 21, 1920. Serial No. 383,168. 7 Claims. (Cl. 238—10.)



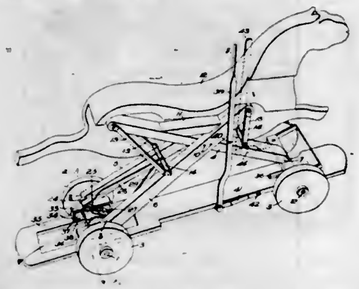
1. A device for holding the slide rails of mine tracks, with the slide rails lying on their sides, their base flanges assuming an inclined position and their heads engaging the webs of the permanent rails, comprising a sheet metal coupling or sleeve shaped to conform to the contour of the rails and having a part to clamp the head of the slide rails and another part to clamp the base flange of said slide rails.

1,376,129. MOLDING-MACHINE. ARTHUR F. ABIGT, Indianapolis, Ind. Filed Apr. 7, 1920. Serial No. 371,793. 7 Claims. (Cl. 22—32.)



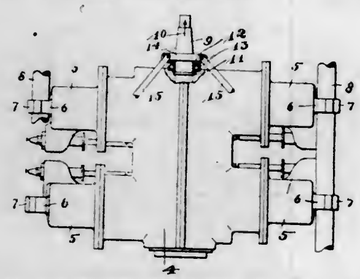
1. In a molding machine, an invertible frame provided with an open-frame match-plate holder, means by which flasks may be accurately associated either simultaneously or independently with the appropriate face of the match plate and with each other, two flask-supporting sand-compressing members carried by the swinging frame at opposite sides of the match plate holder, and means by which said members may be moved toward and from the plane of the match plate.

1,376,130. GAS-CHECK. DORSEY F. ASBURY, Washington, D. C., assignor to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed July 6, 1916. Serial No. 107,848. 11 Claims. (Cl. 89—26.)



1. A gas check for breech loading guns coacting with a seat on the gun and having a sealing surface, the effective sealing area thereof, which coacts with the seat on the gun, progressively increasing as the chamber pressure of the gun increases.

1,376,131. METALLIC ROD-PACKING. JOHN BADEKER, Omaha, Nebr., assignor to Chicago Standard Metallic Packing Company, Omaha, Nebr., a Corporation of Nebraska. Filed Oct. 22, 1917. Serial No. 197,983. 7 Claims. (Cl. 286—22.)



1. In a metallic rod-packing, a packing-ring comprising a series of circumferentially overlapped segments, there being clearance-spaces at the ends of the segments adjoining the bore and one face of the ring, deformable spacing-members extending across said clearance-spaces and stopping the same longitudinally of the rod, and means abutting said face of the ring and confining said spacing-members against displacement except toward the bore of the ring.

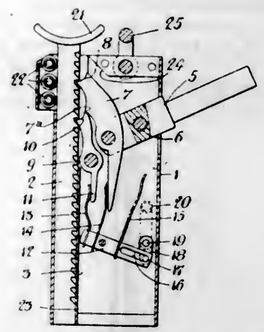
1,376,132. HOBBYHORSE. JOSEPH BALLIN, Dubuque, Iowa. Filed Feb. 5, 1920. Serial No. 356,386. 5 Claims. (Cl. 208—42.)

1. A vehicle having a seat, a frame therefor, rollers or wheels for the frame, connections between the seat and wheels whereby rocking of the seat will drive the vehicle, and means including a rack in engagement with the connections, and a lever pivoted to the seat and rack for reversing from the seat, the direction of travel, at will.

1,376,133. INTERNAL-COMBUSTION ENGINE. VERNON W. BALZER and JOHN MCK. BALLOU, Los Angeles, Calif., assignors to Western Aircraft Corporation, Inc., Los Angeles, Calif. Filed Aug. 11, 1920. Serial No. 402,836. 4 Claims. (Cl. 244—31.)

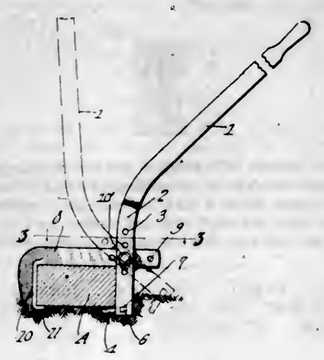
1. In an internal combustion engine, lugs provided on the heads of the cylinders, and cover plates of a form corresponding to the lugs forming with such lugs adjustable supporting means for slidingly supporting the engine.

1,376,134. NOZZLE. HUGH F. BEARDEN, Atlanta, Ga. Filed Jan. 14, 1921. Serial No. 437,282. 3 Claims. (Cl. 15—51.)



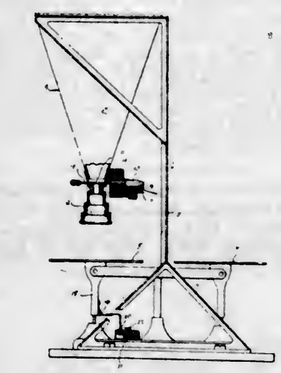
1. A cleaning device, having a flaring nozzle with a long, narrow discharge opening, a pad engaging one face of the nozzle, and extending beyond the discharge end thereof, a strap for securing the pad to the body of the nozzle, and hooks carried by the pad to engage the forward end of the nozzle.

1,376,135. HEAT-EXCHANGER. CARL F. BRAUN, San Francisco, Calif. Filed Mar. 13, 1919, Serial No. 282,258. Renewed Aug. 20, 1920. Serial No. 404,957. 6 Claims. (Cl. 257—236.)



2. A heat exchanger comprising a cylindrical shell, fluid circulating connections therewith, a heating element slidably positioned within said shell and extending from one end thereof, a cover cap sealing one end of the shell and inclosing the extending end of the heating element and an end head member to which the opposite end of the heating element is secured and which in turn closes the opposite end of the shell.

1,376,136. LIFTING-JACK AND HAULER. CHARLES EDMUND CLEWS, Paeroa, New Zealand, assignor of three-sixths to Percy Nicol Kingswell, Auckland, New Zealand. Filed Dec. 30, 1919. Serial No. 348,375. 7 Claims. (Cl. 254—111.)



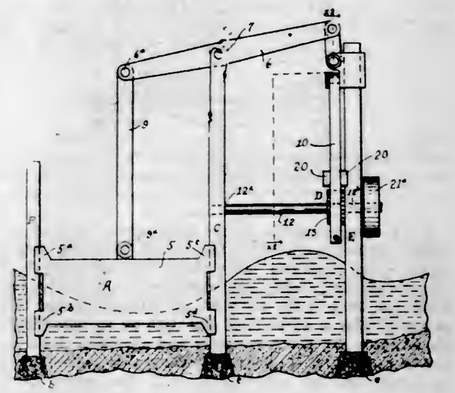
1. A device for the purpose specified, comprising a frame, a movable member passing through the same, an operating lever projecting from said frame, a pawl pivoted to said operating lever, provided with a projection and engaging said movable member, an inclined face carried by said casing and arranged above the pawl in a position to be engaged thereby, a second pawl located between the first pawl and said movable member and engaging the latter, a rocking arm arranged below said pawls, and springs projecting from said arm and adapted to press against either side of the lower portions of said pawls for holding said pawls in engagement with or ont of engagement with said movable member.

1,376,137. TAMPING-TOOL. IRA E. CLUM, Lima, Ohio. Filed Oct. 2, 1920. Serial No. 414,252. 1 Claim. (Cl. 104—13.)

The combination with a lever having a fork at one end and a tamping blade extending at an angle from the fork and laterally beyond the sides thereof, of an arm pivotally and adjustably connected to and extending through the fork, a jaw upon the arm, and means upon the jaw for engaging the tie to hold the jaw to the tie.

1,376,138. ELECTRICALLY-CONTROLLED WEIGHING-SCALE. LOUIS J. CURRAN and GEORGE F. DONNELLY, South Meriden, Conn. Filed Sept. 18, 1920. Serial No. 411,062. 2 Claims. (Cl. 249—55.)

1. The combination with a scale including a pan, a hopper supported above said pan, a slide adapted to open and close the throat of said hopper, said slide provided at its end with an armature, a solenoid magnet coacting with said armature, contact arms adapted to be forced together by said armature, an arm connected with said scale pan, contacts adapted to be brought together by said arm, and electric connections whereby, when the pan is depressed, the magnet will be energized and the armature withdrawn.

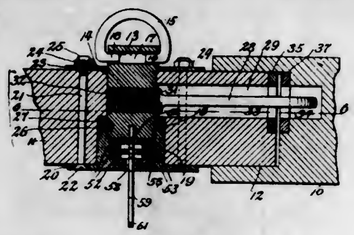


1,376,139. DRILL EXTENSION. RINALDO DEL PORTO, Vallejo, Calif. Filed Nov. 4, 1919. Serial No. 335,694. 9 Claims. (Cl. 287—58.)

1. A drill extension comprising a pair of telescopic members, one of which is threaded, means frictionally connected to the other for engaging with the threads of the first member, means for coupling the members together,

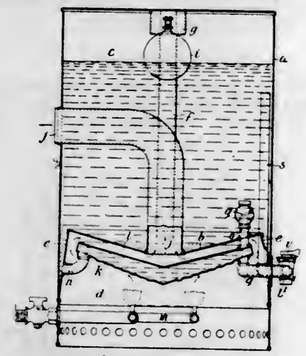
and means extending through the inner member for rendering the coupling means inoperative.

1,376,140. WAVE OR TIDE MOTOR. CHARLES L. ERVIN, Los Angeles, Calif. Filed Jan. 22, 1919. Serial No. 272,604. 3 Claims. (Cl. 253—10.)



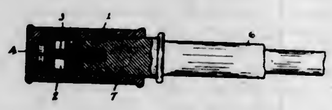
1. A motor of the character disclosed, comprising a float, means constraining said float to a vertical path of travel, a rack bar having downwardly directed ratchet teeth, a rack bar having upwardly directed ratchet teeth, means of pivotal connection between one end of each of said rack bars and said float confining the corresponding ends of said rack bars to a rectilinear vertical path of travel, a ratchet wheel disposed between said rack bars and directly actuated alternately thereby in one direction of rotation only, guide means adjacent to said ratchet wheel for confining said rack bars to the plane of said ratchet wheel, spring means uniting the ends of the rack bars opposite their pivotally connected ends and permitting alternate oscillation of said rack bars about their respective means of pivotal connection.

1,376,141. LOCK. JOSEPH EVANS, Buffalo, N. Y. Filed Nov. 10, 1919. Serial No. 336,900. 4 Claims. (Cl. 70—31.)



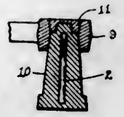
3. A lock comprising a rocking hook, a plate provided with a slot which receives said hook, and means for yieldingly holding said hook in a depressed position compris-

ing a follower engaging said hook, a guide rod connected with said follower, a guide tube which receives said rod, a



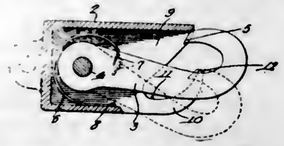
spring interposed between said tube and follower, and a U-shaped guide mounted on said plate and extending over said follower.

1,376,142. WATER-HEATER. JOHN WILLIAM EWART, Mill Hill, England. Filed Nov. 26, 1919. Serial No. 340,829. 2 Claims. (Cl. 122—18.)



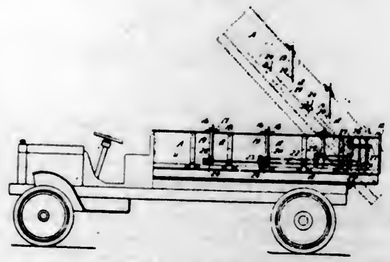
1. In a water heater of the kind herein referred to, a casing divided by an inverted conical partition into an upper water container and a lower heating chamber, the water container being extended downward peripherally below the level of the partition, an inverted conical boiler provided with a water inlet and with an up-take pipe extending into the water container and provided with a non-return valve and a two-way discharge or delivery valve in communication respectively with the water in the water container and with that in the boiler, substantially as herein described.

1,376,143. STORAGE-BATTERY TERMINAL. CLARENCE W. HAZELETT, Lakewood, Ohio, assignor, by mesne assignments, to National Carbon Company, Inc., a Corporation of New York. Filed Nov. 3, 1916. Serial No. 129,260. 3 Claims. (Cl. 204—29.)



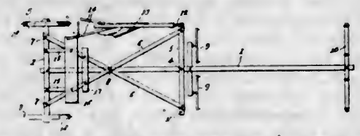
1. In storage batteries, a plate post, an adapter having a lug with an opening to fit over said post and having a socket portion integral with said lug and closed at one end, a screw having its head secured in the closed end of the socket and a cable terminal fitting in said socket, said terminal having a threaded opening adapted to coöperate with said screw to draw the terminal into the socket when the adapter is rotated relative to the terminal.

1,376,144. STORAGE-BATTERY TERMINAL POST. CLARENCE W. HAZELETT, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Sept. 21, 1917. Serial No. 192,439. 6 Claims. (Cl. 204—29.)



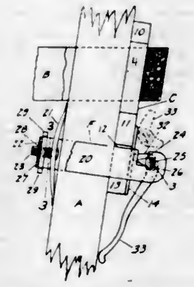
1. The process of making a reinforced storage battery post which consists in embedding one end of a good-conducting metal rod in a lead lug, placing a portion of said lug in a mold for said post and casing lead in the mold around the rod and the remaining portion of the lug.

1,376,145. SAFETY TUG-HOOK. JOHN H. HOWARD, Colfax, Wash. Filed Apr. 12, 1920. Serial No. 373,167. 3 Claims. (Cl. 24—233.)



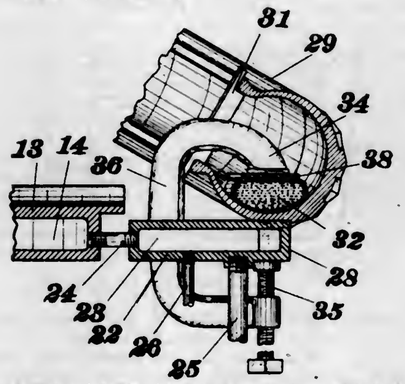
1. In a device of the class described, a housing having a shank adapted to be attached to a suitable portion of the harness, the housing having spaced wings shaped to inclose the shank of a tug hook, a tug hook pivotally mounted within the wings of the housing and having its looped portion projecting beyond the housing, the wings having arcuate upwardly and forwardly projecting tongues, the device having openings between said tongues and the wings to permit of the insertion of the portion of the harness to which the hook is to be attached, the loop of the hook projecting beyond the wings, and the hook having a rearwardly turned end of a suitable length to engage just within the ends of the wings and of the arcuate tongues, said wings and tongues being positioned relative to the end of the hook to form a closure to prevent accidental detachment of the harness from the hook, substantially as shown and for the purposes described.

1,376,146. DUMP-BODY PARTITION AND OPERATING MEANS THEREFOR. MOSES M. KAHN, San Francisco, and FRANKLYN J. SILVA, Oakland, Calif.; said Silva assignor to Moses M. Kahn. Filed May 26, 1920. Serial No. 384,303. 7 Claims. (Cl. 298—8.)



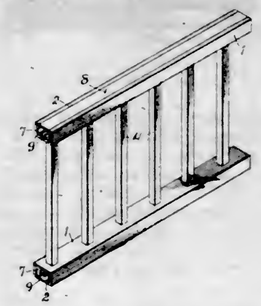
1. In combination, a dump body adapted to be brought to an inclined position, partitions transversely of said body, means for mounting said partitions including a trunnion on each end of said partitions and bearing means therefor, an arm rigidly secured to one trunnion of each partition, means for locking said arms against movement, said means being adapted for individually releasing any of said arms and permit swinging movement thereof.

1,376,147. PLOWING DEVICE. JOSEPH LACHANCE, Morgan Hill, Calif. Filed June 4, 1919. Serial No. 301,712. 2 Claims. (Cl. 97—36.)



1. In a device of the class described, a frame comprising a longitudinal pole, an axle secured to the rear end of the pole, wheels on the ends of said axle, a cross bar secured to said pole intermediate the ends thereof, cross braces having their ends secured to said cross bar and said axle respectively adjacent the ends thereof, and means for attaching a plow to either end of said cross bar, substantially as described.

1,376,148. LUG-STRAP HOLDER. ALBERT A. LAFAYETTE, Lawrence, Mass. Filed Feb. 12, 1921. Serial No. 444,477. 4 Claims. (Cl. 139—48.)

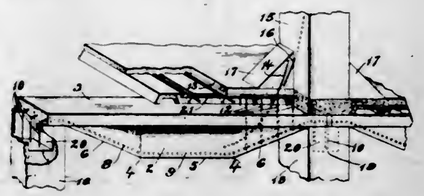


4. The combination in a lug strap holder of a support for the lug strap; with a U-shaped metal yoke having a connecting member, and parallel arms which embrace the picker stick and said support, each of said arms having near its free end an open mouthed angular slot; a bow spring between said arms, the connecting member and the picker stick which carries a fixed screw; a nut for said fixed screw which fits between said arms; a removable clamping nose with pivot ears which fit in said angular slot; and means to turn said nose on said ears as pivots.

1,376,149. VULCANIZER. FRANK O. MELIN, Omaha, Nebr., assignor of one-half to Louis H. Peterson, Omaha, Nebr. Filed May 17, 1920. Serial No. 382,049. 3 Claims. (Cl. 18—18.)

1. A tire vulcanizer having a corner iron with a chambered interior for receiving steam to heat the iron and with an angular projection at one end, constituting a continuation of the supporting surface of the iron for extending between and about projections on the surface of a tire casing.

1,376,150. JOINT-LOCK. ALBERT F. MILLER, Kansas City, Kans. Filed Jan. 14, 1920. Serial No. 351,421. 10 Claims. (Cl. 189—84.)

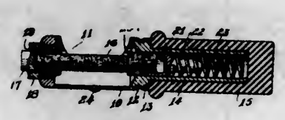


1. In a joint lock of the kind described, an outer tubular member having in one side a longitudinal slot, openings in the opposite side to receive a separate member, and slidable means within the tubular member for engaging and locking said separate member in position, substantially as set forth.

1,376,151. SAFETY CROCHET-NEEDLE. EVA R. MITCHELL, Worcester, Mass. Filed Apr. 4, 1919. Serial No. 287,507. 2 Claims. (Cl. 66—17.)

1. A crochet needle having a handle and a shank curved laterally of the axis of the handle, said shank being further curved in a plane at right angles to the first named curve.

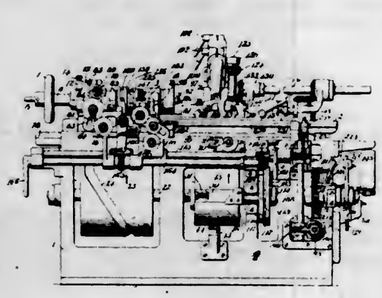
1,376,152. FLOOR SYSTEM. STUART B. MOORE, Houston, Tex., assignor to Texas Concrete Construction Company, Houston, Tex., a Corporation of Texas. Filed July 2, 1920. Serial No. 393,625. 3 Claims. (Cl. 72—15.)



3. The combination with a column having an open upper end, tie wires projecting into said open end and bent laterally therefrom, of a beam of T formation supported by said column and having tapered and flaring extremities, and a poured flooring supported by said beam into which said tie wires project.

1,376,153. INSECTICIDE. WILLIAM MOORE, St. Paul, Minn. Filed Dec. 11, 1919. Serial No. 344,238. 8 Claims. (Cl. 167—6.)

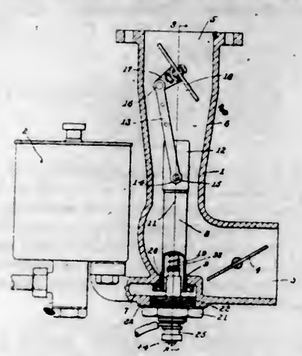
1. An insecticide consisting of a metallic arsenical containing an adsorbed metallic ion.



8. An insecticide consisting of a metallic arsenical, and a metallic salt forming, in the presence of water, an adsorbed metallic ion.

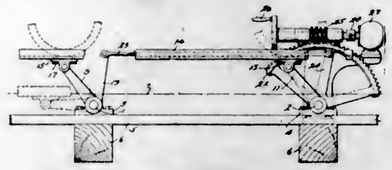
1,376,154. ELECTRICAL LIGHTING DEVICE FOR CIGARS AND THE LIKE. JOSHUA M. MORRIS, Rochester, N. Y. Filed Oct. 2, 1919. Serial No. 328,041. 11 Claims. (Cl. 219—32.)

10. A lighting device comprising a stationary socket forming a terminal, a terminal arranged in said socket, a spring in the socket, a removable hollow terminal adapted to fit in the socket, an incandescing body carried by said removable hollow terminal and adapted to be brought into electrical connection with the terminal in the stationary socket when the hollow terminal is moved to compress the spring, and interlocking connections between the stationary socket and the removable hollow terminal controlled by said spring.



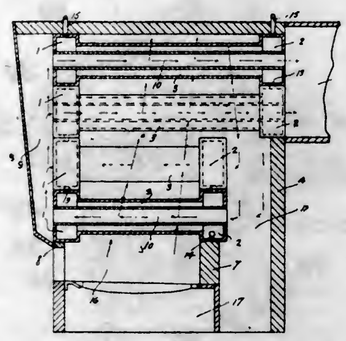
1,376,155. MACHINE FOR AND METHOD OF MILLING BLANKS FOR CUTTERS. FRIEDRICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1919, Serial No. 274,528. Renewed Jan. 31, 1920. Serial No. 355,409. 32 Claims. (Cl. 90—15.)

1. In a milling machine, the combination of a work table, means on the table for holding a blank to be grooved, a rotatable milling cutter adapted to engage the blank and provided with a series of cutting edges at an acute angle to the cutter axis, means for effecting relative movement between the cutter and the blank longitudinally of the latter to cut a groove, and means for effecting relative adjustment between the blank and the cutter toward or from each other along lines at the aforesaid acute angle to the axis of the cutter.



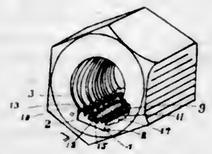
1,376,156. CARBURETER. CLIFFORD T. MURPHY, Los Angeles, Calif., assignor, by direct and mesne assignments, to Columbia Carburetor Company, a Corporation of Maine. Filed Jan. 31, 1917. Serial No. 145,798. 5 Claims. (Cl. 219—38.)

1. In a carbureter, an elongated fuel feeding nozzle adapted to be inserted in a carbureting mixing chamber, said nozzle having a closed upper end and provided with progressively controlled discharge means, an electrical heating unit disposed within the nozzle and terminating a substantial distance below the upper end thereof to provide a vaporized fuel receiving reservoir of a material capacity, said unit having heating coils to intensely heat the fuel passing therethrough to be vaporized prior to its delivery to the fuel reservoir, and movable means



embracing the nozzle for progressively opening or closing the fuel feeding means therein.

1,376,157. VEHICLE-LIFT. LAWRENCE F. NADIG, Quakertown, Pa. Filed Feb. 25, 1920. Serial No. 361,099. 5 Claims. (Cl. 254—89.)



1. A vehicle lift comprising a plurality of runners arranged in spaced relation on a floor, means for simultaneously raising the runners above the floor surface, whereby access may be had to the under side of the vehicle, the said means including a plurality of spaced shafts, the said shafts extending laterally of the runners, and arms connecting the said shafts and the runners, one end of said arms having a rigid connection with the shafts, the other end of said arms having a pivotal connection with the respective runners, means for rotating one of the shafts, said means including a worm and gear connection, whereby the vehicle may be held in any intermediate position between the limits of movement independent of other braking means.

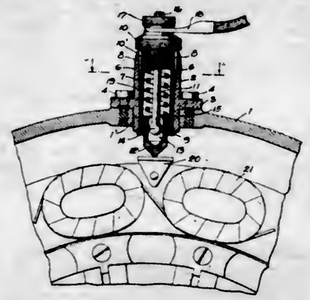
1,376,158. BOILER. ROBERT JOSEPH NOTT, Victoria, British Columbia, Canada. Filed June 7, 1919. Serial No. 302,498. 1 Claim. (Cl. 122—266.)

In a boiler, a setting forming an inclosure having a furnace, an outlet in its rear wall, and a smoke box casing on its front wall; a plurality of superposed connected front water chambers disposed adjacent said casing and inclosed thereby, a plurality of tubes extending rearwardly from the uppermost chambers in parallel rows and provided on their rear ends with water chambers similar to the front ones, the latter chambers extending into said outlet and the lowermost one being supported on the said rear wall, a plurality of shorter tubes extending rearwardly from the lowermost front water chambers provided on their rear ends with similar chambers spaced from the rear wall of the setting, the lowermost one of which rests on the furnace bridge, and smaller tubes extending through the aforesaid tubes and chambers the interiors of the lower ones of which communicate with the inclosure and the smoke box and of the upper ones with the smoke box and the said outlet.

1,376,159. NUT-LOCK. WILLIAM HENRY PALMER, Montreal, Quebec, Canada. Filed June 10, 1920. Serial No. 388,064. 1 Claim. (Cl. 151—25.)

A nut lock comprising a locking unit formed of a plate having inwardly curled ends and one curled end slotted for a keyway and annularly grooved rollers having end stems under curled ends, springs behind said rollers at the sides and a spring between said rollers normally closing the keyway and retaining said rollers under said curled ends, and a key for alining the rollers, said locking unit being insertible in a corresponding slot through the threads of the nut and held therein.

1,376,160. PROCESS OF MAKING STEEL. EDWARD T. PELTON, Chicago, Ill. Filed July 6, 1920. Serial No. 394,228. 4 Claims. (Cl. 75—27.)



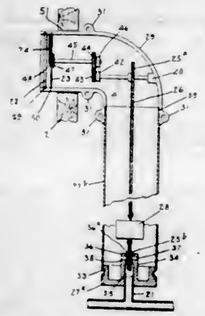
1. The process of producing steel which consists in charging an acid lined furnace with iron materials low in phosphorus and sulfur, bringing the charge to a molten condition, removing the slag from the surface of the molten charge, adding metallic ore to the charge, causing ebullition in the charge, and withdrawing the charge from the furnace.

1,376,161. PROCESS OF MAKING BASIC ZIRCONIUM SULFATE. EDWARD J. PUGH, Trenton, Mich., assignor to Pennsylvania Salt Manufacturing Company, Wyandotte, Mich., a Corporation of Pennsylvania. Filed Jan. 30, 1919. Serial No. 274,123. 4 Claims. (Cl. 23—13.)

3. The process of manufacturing a basic sulfate of zirconium from zirconium bearing ore, comprising the steps of passing chlorin gas over the heated ore and thereby subliming the zirconium content from the ore, adding water to the sublimate and thereby bringing the zirconium content into solution, and adding sulfuric acid to the solution and thereby precipitating the zirconium content as a basic zirconium sulfate; substantially as described.

1,376,162. MAGNETO-CONTACT. VIRGIL RIGSBY, Hemphill, Tex. Filed Mar. 9, 1920. Serial No. 364,573. 4 Claims. (Cl. 173—324.)

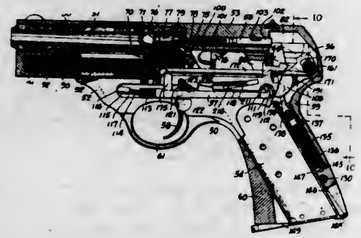
3. A device of the character stated, comprising a tubular casing having key-ways therein, a tubular barrel within the casing, external keys on the barrel fitting the key-ways in the casing, an external annular flange on the lower end of the barrel engaging the end of the casing,



a plug in the outer end of the barrel, a guide pin on the plug within the barrel and a movable contact carried by a pin.

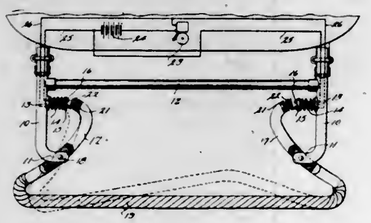
1,376,163. DENTAL IMPRESSION-TRAY. LESLIE V. ROBINSON, New York, N. Y. Filed Feb. 17, 1921. Serial No. 445,714. 6 Claims. (Cl. 32—6.)

1. A dental impression tray having two members joined by a connecting pivot, and having complementally curved adjacent edges provided with inwardly projecting flanges curved longitudinally upon the base of the tray.



1,376,164. FLUID-GAGE FOR AUTOMOBILES. EUGENE H. ROLLIN, Indianapolis, Ind. Filed Dec. 15, 1919. Serial No. 344,799. 4 Claims. (Cl. 73—54.)

3. In a fluid gage the combination with a fluid containing casing, a sprocket wheel rotatably supported in the base thereof, a float movable in said casing and actuated by the fluid and a sprocket chain associated with said sprocket wheel and actuated by said float, of a second sprocket wheel rotatable by said chain, a sectionalized elbow adapted to project through the instrument board of an automobile and be visible therethrough, the end of said elbow being rigidly secured to the upper end of said tubular casing, a dial positioned in the open end of said sectionalized elbow, a shaft extending through said dial, an indicating finger carried on said extended end of the shaft and coöperating with said dial to indicate the fluid level in said tubular casing, a sprocket shaft rigid with said second mentioned sprocket wheel and rotatable thereby, meshing gears carried by said shafts for actuating said indicating finger, said second mentioned sprocket



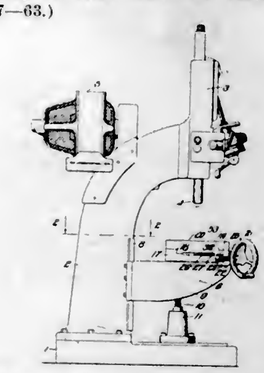
wheel, sprocket shaft, meshing gears and indicating shaft being supported in assembled relation to one of said sections of said sectionalized elbow, the other section of said elbow being positioned on said first mentioned section so as to inclose and house the gears and shafts, and means for securing said sections of said elbow together and secure the same to said tubular casing.

1,376,165. FIREARM. WALDO E. ROSEBUSH, Spokane, Wash. Original application filed Jan. 26, 1920, Serial No. 353,983. Divided and this application filed June 25, 1920. Serial No. 391,582. 6 Claims. (Cl. 42—3.)

1. In an automatic hand firearm, a hammer, a sear adapted to coact with the said hammer, a trigger adapted to actuate the said sear, and a safety device under the control of the operator and adapted to lock the said hammer in cocked position and to move the sear into inoperative position relative to the trigger.

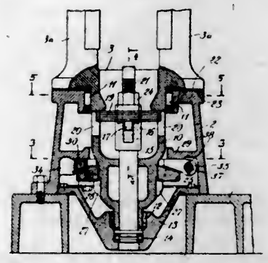
1,376,166. OBSTRUCTION-ALARM. MORRIS ROSENBERG, Brooklyn, N. Y. Filed Jan. 20, 1920. Serial No. 352,795. 1 Claim. (Cl. 200—52.)

The herein described circuit closer comprising a pair of spaced supports, a brace extending between said supports and serving to hold them rigid with respect to each other, a pair of spaced contacts carried by each support, a switch arm pivoted in the free end of each support, a bridge carried by one end of each arm, and a flexible striking member connecting the ends of the arms remote from the bridge members.



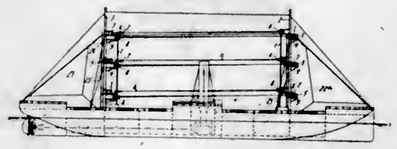
1,376,167. NOVELTY. HUGO SCHREPFER, West Hoboken, N. J. Filed Nov. 19, 1919. Serial No. 339,091. 1 Claim. (Cl. 46—37.)

A device of the class described comprising a frame having an opening therein, a strip of paper having two pictures drawn thereon, one of said pictures showing the figure of a person in one position and the other showing said figure in another position, said pictures being longitudinally spaced apart and the ends of said strip being secured to the rear of said frame, a handle, an enlarged member rigid with the upper end of said handle, the central portion of said strip being attached about said enlarged member, a slotted member lying between said enlarged member and said frame, said strip passing through said slot in both directions, a member bridging said slot so as to conceal the line separating the two folds of the strip



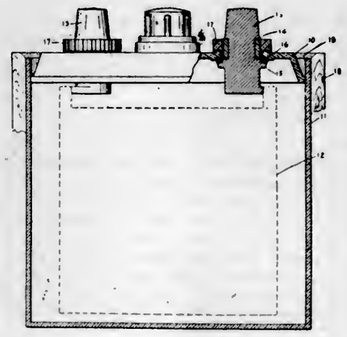
passing through said slot, said handle being movable alternately up and down.

1,376,168. DRILL-TABLE MECHANISM. WILLARD T. Sears, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 28, 1919. Serial No. 313,906. 13 Claims. (Cl. 77—63.)



1. In a drilling machine, a work-support, a saddle mounted thereon and horizontally adjustable therealong, a table mounted on the saddle and horizontally adjustable therealong, and means operated by a single shaft on one of the members for optionally and independently effecting either the adjustment of the table on the saddle or the saddle on the support.

1,376,169. SUPPORTING AND CLAMPING MECHANISM FOR DRILLING-MACHINES. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 22, 1918, Serial No. 229,999. Renewed Nov. 9, 1920. Serial No. 422,960. 13 Claims. (Cl. 77—27.)



1. In a drilling machine having a base, a column rotatably supported on the base and drilling mechanism carried by the column, the combination of a column-support at the axis of the column, and vertically acting clamping means adapted to effect a direct engagement between the column and the base supplemental to the said support, the column being chiefly carried directly by the base when the said clamping means is engaged and being carried entirely on the support when the said clamping means is disengaged.

1,376,170. MECHANICAL CONTROL OF SAILS. MONTAGUE HERBERT CHURCHILL SHANN, Wodonga, Victoria, Australia. Filed Aug. 24, 1920. Serial No. 405,707. 7 Claims. (Cl. 114—104.)

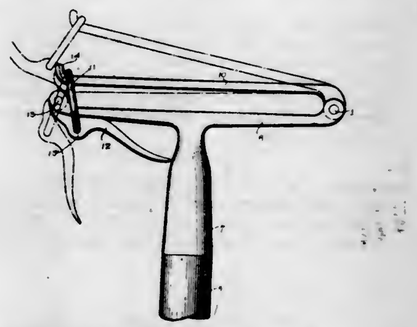
1. Apparatus for controlling the position of sails comprising in combination with a mast and spaced yards and a sail of a ship, a double drum, means coacting with the drum and associated with the sails to shift the same laterally, and means for operating the said drum.

1,376,171. STORAGE BATTERY. MALCOM O. SMITH, Indianapolis, Ind., assignor to Permalife Storage Battery Co., Poughkeepsie, N. Y., a Corporation of New York. Filed June 9, 1919. Serial No. 302,866. 2 Claims. (Cl. 204—20.)

1. A storage battery having a non-corrosive jar with a plurality of plates therein, a non-corrosive cap mounted on said jar for inclosing said plates, a plurality of terminals adapted to engage said plates, a non-corrosive screw threaded sleeve formed upon and secured in each of said terminals and a non-corrosive thumb nut adapted to screw on said sleeve for removably securing said cap on said terminals.

1,376,172. VULCANIZED-OIL PRODUCT. WALTER O. SNELLING, Allentown, Pa. Original application filed May 22, 1915, Serial No. 29,765. Divided and this application filed Aug. 8, 1919. Serial No. 316,023. 3 Claims. (Cl. 106—23.)

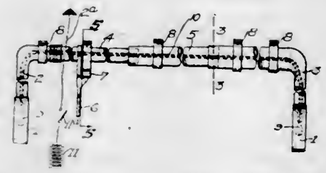
3. The process that comprises depolymerizing a vulcanized oil product in the presence of gaseous hydrochloric acid.



1,376,173. VULCANIZED-OIL PRODUCT. WALTER O. SNELLING, Allentown, Pa. Original application filed May 22, 1915, Serial No. 29,765. Divided and this application filed Aug. 8, 1919. Serial No. 316,024. 3 Claims. (Cl. 106—23.)

3. The process that comprises imparting different degrees of plasticity to a plurality of portions of vulcanized oil and mixing the resulting products.

1,376,174. VULCANIZED-OIL PRODUCT. WALTER O. SNELLING, Allentown, Pa. Original application filed May 22, 1915, Serial No. 29,765. Divided and this application filed Aug. 21, 1919. Serial No. 318,967. 1 Claim. (Cl. 106—23.)

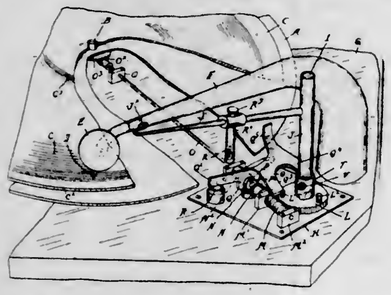


A liquid vulcanized oil product capable of being transformed into a solid factis-like material on contact with water.

1,376,175. MOP-HEAD. GEORGE HERMAN SUNDERMANN, Jr., New York, N. Y. Filed Dec. 29, 1920. Serial No. 433,884. 1 Claim. (Cl. 15—54.)

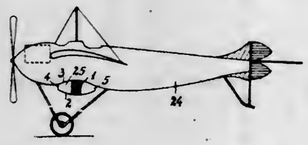
A mop head, including a cross arm, a second cross arm pivotally secured to said first named cross arm, a lever pivotally secured to the opposite end of said first named arm, and a link rockingly attached to said lever, said link being adapted to engage the free end of said second cross arm.

1,376,176. VEHICLE DIRECTION-INDICATOR. GUY TORRICELLAS, San Diego, Calif. Filed Aug. 19, 1920. Serial No. 404,577. 5 Claims. (Cl. 116—47.)



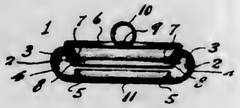
1. A signaling apparatus for vehicles, including a plurality of sections connected together in approximate alinement, the end ones being provided with right angle turns, a signaling device secured on the extended end of said right angle turn, and means for securing them to the bows of the top of the vehicle.

1,376,177. DISK-RECORD-REPLAYING DEVICE. ERNEST S. THOMPSON, Detroit, Mich. Filed Feb. 26, 1917, Serial No. 150,937. Renewed Apr. 24, 1918. Serial No. 230,609. 6 Claims. (Cl. 274—15.)



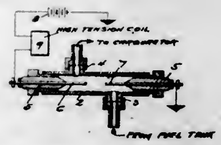
1. In a playing device for spirally grooved disk records, the combination with a rotatable record-carrying member,

of a needle-carrying member adapted to be advanced across the record when its needle is engaged with the groove of a record and said record-carrying member rotated, a lifting member for said needle-carrying member, a drive connection between said record-carrying member and lifting member, a reversible clutch mechanism for



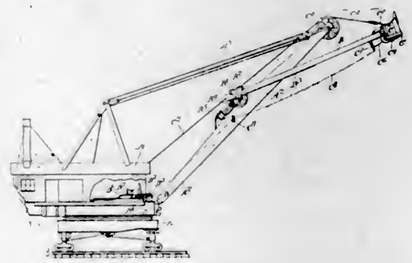
throwing said drive connection into operation in either direction, means controlled by movement of the needle-carrying member for throwing the clutch into operation so as to operate the drive connection in one direction, and means controlled by movement of the drive connection for throwing the clutch to operate the drive connection in the opposite direction.

1,376,178. RADIATOR. LUDWIG WAGENSEIL, Aachen, Germany, assignor to Hugo Junkers, Aachen, Germany. Filed Jan. 24, 1916, Serial No. 73,987. Renewed May 20, 1918. Serial No. 235,697. 13 Claims. (Cl. 244—31.)



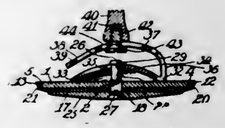
1. The combination of a self-propelled vehicle, a casing of tubular form mounted upon the vehicle extending fore and aft thereof and having its ends open and of smaller size than the portion of the casing intermediate the ends, the walls of the casing being substantially continuous from one end of the casing to the other, and a radiator within the casing in the intermediate portion thereof where the casing is of larger size than at its ends, said radiator being disposed substantially transverse to the direction of the length of the casing.

1,376,179. POWDER-PUFF. RUSSELL WHITCOMB, Elizabeth, and GEORGE H. HARMAN, Glen Ridge, N. J. Filed June 28, 1920. Serial No. 392,296. 2 Claims. (Cl. 15—72.)



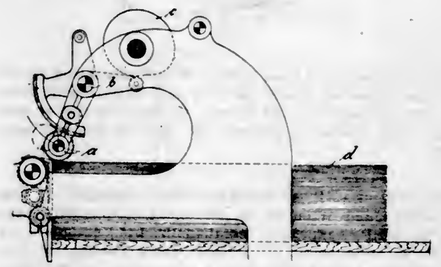
1. In a device of the kind described, an annular supporting form having an inwardly projecting gripping bead at its upper edge, a backing member provided at its periphery with an integral depending skirt having an annular receiving socket formed therein, a facing member, said facing member extending across the lower side of said supporting form with its marginal portions folded upwardly around said supporting form and inwardly over said gripping bead, and said backing member having the receiving socket of said skirt sprung over said gripping bead to clamp said marginal portions of the facing member between said gripping bead and said skirt.

1,376,180. PROCESS OF TREATING LIQUID FUEL. ELMER E. WICKERSHAM, Stockton, Calif. Filed June 29, 1920. Serial No. 392,063. 20 Claims. (Cl. 204—24.)



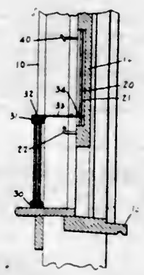
1. The process of lowering the end boiling point of liquid fuel, which comprises passing a plurality of electric sparks through the fuel.

1,376,181. DIPPER-TRIPPING MECHANISM. EDWIN J. WILKIE, PAUL S. STEVENS, and WERNER LEHMAN, South Milwaukee, Wis., assignors to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 31, 1919. Serial No. 286,604. 1 Claim. (Cl. 214—146.)



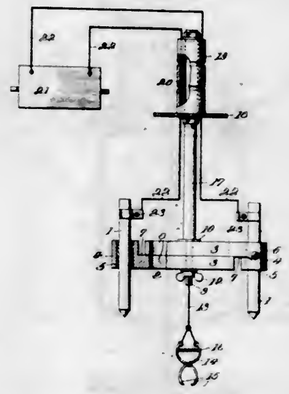
A dipper latch tripper device comprising a rotary impulse wheel connected to a winding drum, a cable wound about said drum, tension means acting through said drum to keep the cable taut, but not tight enough to trip the dipper latch, said tension means comprising a torque spring concentric with said rotary impulse wheel, a fluid pressure means acting against said rotary impulse wheel at the will of the operator whereby tension of the cable may be increased sufficiently to trip the dipper latch.

1,376,182. SAFETY-RAZOR. OSCAR C. WILLIAMS, Indianapolis, Ind. Filed Mar. 3, 1920. Serial No. 362,930. 3 Claims. (Cl. 30—12.)



1. A safety razor comprising a rectangular guard plate having four fingered guards and also a central aperture and a socket, a rectangular blade having four cutting edges and also a central aperture and a socket, a clamp plate that is rectangular in plan and having a stud central thereon and extending through the apertures in the blade and the guard plate, the clamp plate having also a dowel thereon that extends through the sockets in the blade and the guard plate, said stud having a head thereon, a frame comprising a curved base plate having a concave side arranged on the guard plate and a curved arm extending from the edge of the base plate and over the outer or convex side of the base plate, said base plate having a slot receiving said stud, the convex side of said base plate engaging the head of said stud, and a handle adjustably connected to the curved arm.

1,376,183. SHEET-FEEDING. CARL WINKLER, Berne, Switzerland. Filed Jan. 20, 1921. Serial No. 438,803. 3 Claims. (Cl. 271—27.)



2. In a device for lifting separate sheets from a pile of the kind set forth in claim 1, the use of double valves for controlling the suction and blowing nozzles respectively, one of which valves (*l* or *u*), by which communication is effected between the pressure pipe and one of the groups of blowers (*e*) or between the suction pipe and the suction nozzles (*a*), being fastened on the valve spindle (*o* or *w*), while the other valve (*m* or *v*), by which communication is effected between the pressure pipe and the other group of blowers or between the atmosphere and suction nozzles (*a*), is adapted to slide on, and is actuated by a sleeve surrounding said spindle.

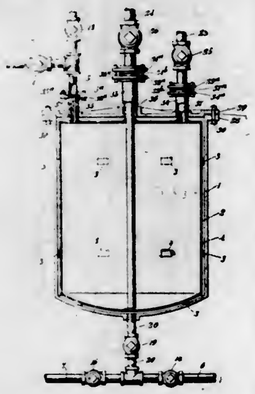
1,376,184. WINDOW-VENTILATOR. CHARLES S. WOODS, Indianapolis, Ind. Filed Mar. 22, 1920. Serial No. 367,666. 8 Claims. (Cl. 98—31.)

8. The combination with a window casing having a sill, and a window sash, of vertical guide members secured to the sash at each side thereof, an air deflector plate adapted to rest on the window sill, a flexible connecting member secured to the upper edge of the deflector plate near each end, and slidable on said guide member, and means for supporting said deflector by and against the window sash when not in use.

1,376,185. ELECTRODE-HOLDER. WILLIAM RICHARD BEAZLEY, Jacksonville, Fla. Filed July 21, 1920. Serial No. 397,918. 3 Claims. (Cl. 219—8.)

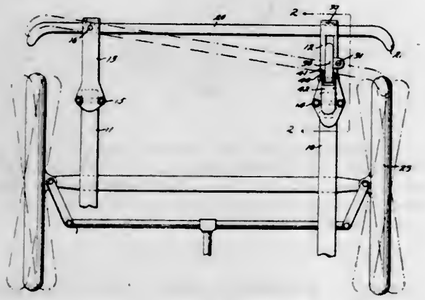
1. An electrode holder comprising a pair of plates formed with registering slots, an electrode carried by each of said plates, a bolt passed through said slots, and a nut on said bolt.

1,376,186. WHEEL-ANCHORING DEVICE. WILLIAM W. BLAKELY and FRANK W. KNOTT, Detroit, Mich.; said Knott assignor to said Blakely. Filed Nov. 24, 1919. Serial No. 340,327. 9 Claims. (Cl. 188—32.)



1. A wheel anchoring device comprising a clamping collar proportioned to engage a spoke of a vehicle wheel, means for adjusting said collar, and a tie member loosely carrying said clamping collar at one end and provided at the other with securing means.

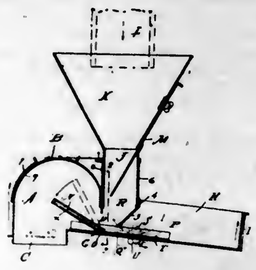
1,376,187. ATTACHMENT FOR PLATEN PRINTING-PRESSES. CHARLES R. BROWN, Minneapolis, Minn., assignor of one-half to Willard Stowell, St. Paul, Minn. Filed June 5, 1919. Serial No. 301,940. 1 Claim. (Cl. 164—98.)



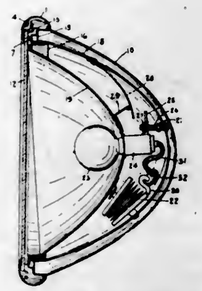
A combination of two metal clamps with a metal ejector bar attached at each end to the lower side of said clamps at the inner ends thereof, together with a metal perforating, cutting or scoring blade attached at each end to the upper side of said clamps also at the inner ends thereof, and all in combination with a suitable metal base, all substantially as described.

1,376,188. BLOW-CASE. MAURICE B. COOKE, Carneys Point, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 27, 1919. Serial No. 326,833. 10 Claims. (Cl. 103—8.)

1. In an apparatus of the character indicated, in combination, a blow case element for handling fluid and comprising an inner and an outer receptacle spaced from each other to furnish an intermediate space, a container element for the fluid, fluid conveying connections between the inner receptacle of the blow case element and the container element, means for creating a desired absolute pressure in the inner receptacle thereby to move the fluid from one said element to the other, and means whereby the same absolute pressure is created in said space and applied to the exterior of said inner receptacle, as is created in, and applied to, the interior, whereby the pressure upon said inner receptacle is equalized.



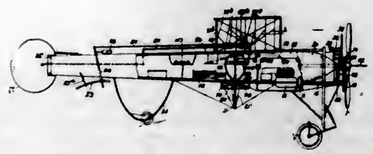
1,376,189. COMBINED BUMPER AND LOCKING DEVICE. WALTER HUDSON CRISWELL, Merlin, Oreg. Filed Feb. 2, 1920. Serial No. 355,619. 9 Claims. (Cl. 293—55.)



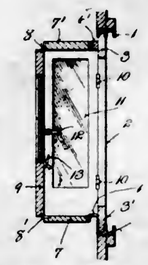
1. In a power driven vehicle, a movable bumper, and means to lock the bumper in forward bumping position or in rearward locking position relative to at least one of the steering wheels of the vehicle to render the steering wheel inoperative.

1,376,190. MATERIAL-SEPARATOR. MERRELL A. DEAN, St. Louis, Mo., assignor to Williams Patent Crusher & Pulverizer Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 31, 1920. Serial No. 370,163. 6 Claims. (Cl. 130—17.)

1. A separator comprising a box having an open bottom outlet and a side inlet, walls forming a feed spout discharging at said inlet and forming also a separating chamber opposite said inlet having a bottom inclined away from said box, an inclined wall extending from the lower side of said inlet inward and upward in said box, a pan slidably mounted like a false bottom in said separating chamber and connected to and carrying said inclined wall more or less into said box and thereby varying the size of said inlet, and means to produce air suction through said box.

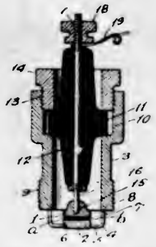


1,376,191. LAMP CONSTRUCTION. CHARLES L. DE MARTIN and WILLIAM M. MATTEOLI, Connersville, and SAMUEL F. ARBUCKLE, Indianapolis, Ind., assignors, by mesne assignments, to United States Automotive Corporation, Connersville, Ind., a Corporation of Delaware. Filed June 2, 1919. Serial No. 301,360. 3 Claims. (Cl. 240—41.)



1. A lamp construction including a casing, a door mounted on said casing, an annular rim removably secured on said casing, a tilting reflector pivotally mounted on said rim, a frame member spaced from said reflector and secured to said rim, said frame member extending between said reflector and casing, and means supported between said frame member and reflector for actuating said reflector, whereby said reflector, actuating means and supporting rim and frame may be removable from said casing as a unit.

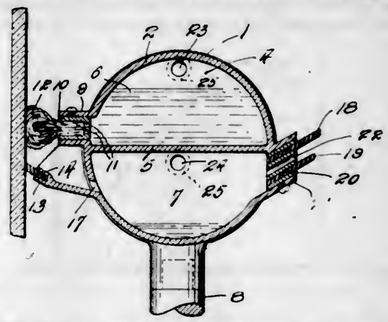
1,376,192. RADIO AERIAL TORPEDO. GARNETT JOEL DYE, Dothan, Ala. Filed Nov. 8, 1918. Serial No. 261,611. 6 Claims. (Cl. 244—1.)



1. In a self propelled torpedo, the combination of a body adapted to carry a high explosive, a motor within the body, a propeller shaft driven by the motor and projecting forward from the body, the projecting end of the propeller shaft having a central bore and a transverse keyway at the rear end of the bore, an impact member fitted slidably in the bore and projecting forward from the shaft, a contact member surrounding the portion of the shaft having the keyway and having rigid connection with the rear end of the impact member, and firing devices for the explosive including a trigger and a plunger between said contact member and the trigger whereby the trigger is released when the impact member strikes an obstacle.

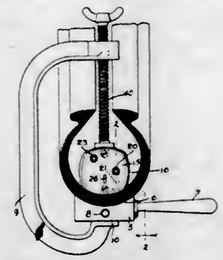
1,376,193. COLLAPSIBLE WINDOW. WILLIAM P. EGGERS, Fond du Lac, Wis. Filed Oct. 28, 1920. Serial No. 420,134. 2 Claims. (Cl. 20—40.)

1. A collapsible cab window comprising a skeleton frame, roof and sill panels hingedly secured to the upper and lower strips of the skeleton frame, a side window sash hingedly connected to the outer edges of the roof and sill panels, and front and rear windows in hinged connection with the end strips of the skeleton frame, the upper edges of the front and rear windows serving as supports for the roof panel when the hingedly connected parts are distended.



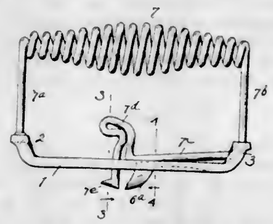
1,376,194. MEANS FOR AND METHOD OF IGNITING FUEL. ROY FRANCIS ENSIGN, Pasadena, Calif. Filed Jan. 21, 1918. Serial No. 213,060. 7 Claims. (Cl. 123—169.)

1. A spark plug provided with electrodes having juxtaposed surfaces and being spaced apart to form a gap that is unobstructed throughout the space within the perimeters of said surfaces and being of diameters sufficiently exceeding the width of the gap between said surfaces to allow capillary attraction acting upon liquid fuel between the electrodes to withdraw from the electrode edges a sufficient portion of such fuel to expose the edges of the electrode to allow the passage of the spark between the electrodes though they are drenched with such fuel.



1,376,195. WINDOW-CLEANING DEVICE. ALPHONSE FERNANDEZ, Washington, D. C. Filed Feb. 14, 1921. Serial No. 444,886. 2 Claims. (Cl. 15—53.)

1. In a window cleaning device, a casing having upper and lower compartments, the upper compartment providing a reservoir for cleaning liquid, a moistening and cleaning element mounted upon and communicating with said reservoir, a trough with an inclined bottom extending from the lower compartment below said element, an opening

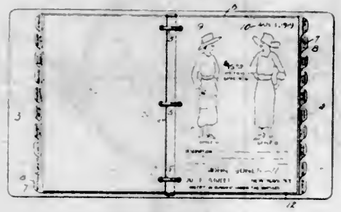


into said lower compartment being provided above said bottom, and a resilient strip carried by the front edge of said bottom.

1,376,196. VULCANIZING-MOLD. OSCAR M. FREDD, Hancock, Mich. Filed Dec. 28, 1920. Serial No. 433,644. 4 Claims. (Cl. 18—18.)

1. In combination with a vulcanizing mold, a reversible heating element adapted to be placed in opposition to the mold and to clamp the material operated upon between the heating element and the mold.

1,376,197. SADIRON-HOLDER. SAMUEL H. GIBSON, Cleveland, Ohio, assignor to The Fanner Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 7, 1919. Serial No. 302,555. 4 Claims. (Cl. 68—27.)



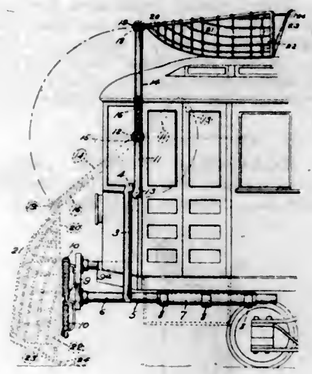
1. A sad iron holder comprising a base member, upright members mounted adjacent the ends of the base, a connecting handle member between the upright members, a latch having a knob and a foot, which are formed from a continuous piece of resilient material, which material is an extension of one of the end upright members.

1,376,198. BUYER'S GUIDE. HERMAN A. GOLDSTONE, New York, N. Y. Filed Oct. 18, 1919. Serial No. 331,549. 1 Claim. (Cl. 283—1.)

A buyer's guide comprising a loose-leaf binder, loose-leaf index pages releasably secured in said binder and provided with exposed tabs at the edges thereof bearing

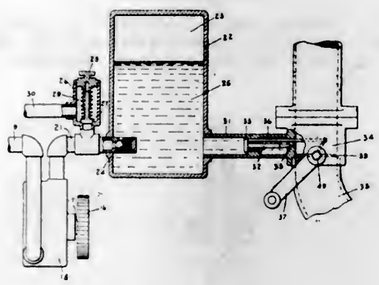
indicia of different classes of merchandise and loose-leaf page advertisements of different manufacturers all of substantially uniform size and insertible in the binder between the index pages aforesaid, said page advertisements bearing description data of the goods made by the manu-

facturers supplying the same, indicia on said advertisement pages corresponding with the indicia on the tabs of the index pages with which the advertisement pages are to be associated in the binder and indicia on each of the advertisement pages giving notice of the date on which the informative data on that particular page is effective.



1,376,199. COMBINED GAME AND EDUCATIONAL DEVICE. FRANK GOTSCHE, San Francisco, Calif. Filed July 8, 1920. Serial No. 394,736. 2 Claims. (Cl. 46—57.)

1. In a device of the character described, a stationary member, a revolving member, positioned within said stationary member, game pieces adapted to be moved by said revolving member and characters on said revolving and said stationary members, for the purpose of indicating plays.

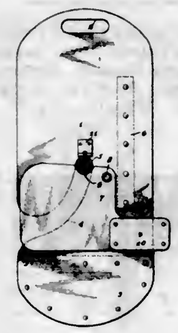


1,376,200. AUTOMATIC LIFE AND LIMB SAVING DEVICE FOR STREET-CARS, AUTOMOBILES, AND OTHER VEHICLES. WILLIAM S. GREGORY, Cincinnati, Ohio, assignor of one-third to Daniel D. Burkhardt, Cincinnati, Ohio. Filed Oct. 28, 1920. Serial No. 420,260. 3 Claims. (Cl. 293—15.)

1. An automatic life and limb saving device or apparatus for use on vehicles comprising a downwardly-forked frame-work pivotally-mounted at the fore-end of the vehicle, a rear-extension at the lower ends of said frame-work, guide-ways at the bottom of the vehicle for said rear-extensions, fore-extensions at the said lower ends of the said frame-work, a padded transverse buffer cross-head mounted on the outer ends of the said fore-extensions and arranged in advance of the lower fore-end, sill or dash of the vehicle, a rearwardly-open convex cage or catch-all of screen wire or the like pivotally-mounted at the upper ends of vertical extensions on the said downwardly-forked frame-work, and a suitable pad or cushion in the bottom of the said cage to ease or break the force of contact of

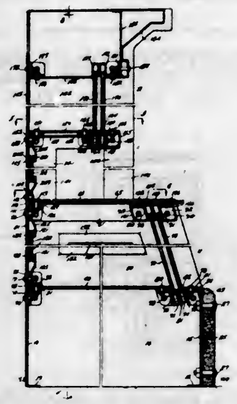
the object or victim caught in the said cage in the unstopped or uncontrolled forward movement of the said vehicle, substantially as herein set forth.

1,376,201. FUEL-FEED FOR INTERNAL-COMBUSTION ENGINES. EARL RODNEY HARRIS, Greencastle, Ind. Filed Apr. 19, 1919. Serial No. 291,343. 4 Claims. (Cl. 158—36.)



1. A device for supplying fuel to an internal combustion engine, including a mixing chamber, means for supplying fuel to said mixing chamber under constant pressure, an air intake in communication with said mixing chamber, valves for controlling the admission of air and fuel to said chamber, a single means for operating said valves simultaneously for obtaining the proper mixture of fuel and air therein, and means for adjusting the relative position of said operating means for regulating the ratio of fuel to air admitted through said valves.

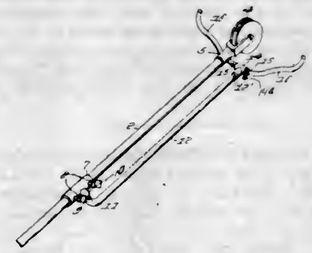
1,376,202. RAT-GUARD. GILBERT JOSEPH HART, New Haven, Conn. Filed Nov. 11, 1920. Serial No. 423,450. 2 Claims. (Cl. 114—221.)



1. A device of the character stated, comprising a plate, a weight secured to one face of the plate adjacent its lower edge, a keeper pivoted to the other face of the

plate, said plate having a rope receiving recess therein, and a weighted arm on the keeper maintaining the keeper

in position to coact with the walls of said recess in encircling the rope.

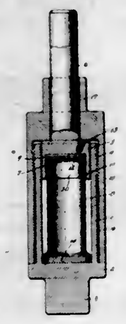


1,376,203. SHOWCASE. WALTER PAYNE HIMES, New Bethlehem, Pa., assignor of one-half to Leslie R. Himes, New Bethlehem, Pa. Filed Mar. 29, 1920. Serial No. 369,493. 8 Claims. (Cl. 211—25.)

3. A show case, comprising a hollow metal base, a lower compartment attached to the base and provided with a glass top and with sliding doors at the front, each door being formed of a single glass plate, and an upper compartment having side legs resting on the lower compartment to space the upper compartment from the glass top, the said upper compartment being provided at the front with sliding doors each formed of a single glass plate.

1,376,204. TROLLEY-WHEEL GUARD. AMOS L. HITCHCOCK, Carrabelle, Fla. Filed Apr. 7, 1920. Serial No. 372,009. 3 Claims. (Cl. 191—74.)

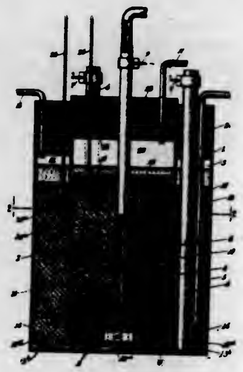
1. The combination with a trolley pole including a trolley wheel operatively mounted in the head thereof, of a bracket arm on the trolley pole positioned in a plane substantially parallel thereto, the upper end of the bracket arm having guard arms extending laterally, upwardly and curved partly toward the wire either one of which adapted to be engaged by the wire when it leaves the wheel, thereby preventing the trolley pole from rising to a point where it would damage the trolley or span wires, said guard arms being adjustable rotatively so as



to dispose the laterally, upwardly and curved parts in different positions relatively to the trolley wire.

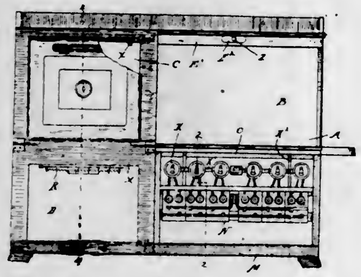
1,376,205. DISK VEHICLE-WHEEL. ROSCOE C. HOFFMAN, Indianapolis, Ind. Filed July 6, 1920. Serial No. 394,239. 3 Claims. (Cl. 301—63.)

1. A disk wheel and rim integral therewith, formed from a single piece of sheet metal, having an annular depression formed therein, a tire flange formed about the edge of said rim, a rim member having a flange formed thereon, and an enlarged portion on said rim member adapted to seat in said depression for securing said rim member on said rim and locking it in position.



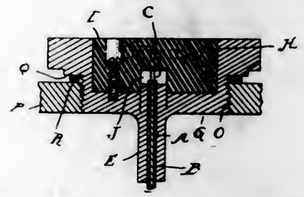
1,376,206. AIR-SPRING. JOHN J. ISLER, Kipling, Mich. Filed Apr. 2, 1920. Serial No. 370,721. 4 Claims. (Cl. 267—35.)

2. A device of the character stated, comprising a cylinder, a plunger in the cylinder, said plunger having



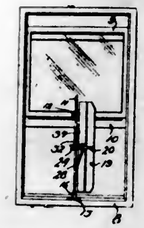
a cylindrical recess in its inner end, a cylindrical pneumatic cushion in the cylinder, one end of said cushion secured in the recess of the plunger, a disk secured in the other end of the cushion, said disk expanding the walls of the cushion and holding the walls of the cushion in contact with the inner face of the cylinder, and said cushion throughout the greater portion of its length having its walls spaced from the inner surface of the cylinder.

1,376,207. PROCESS FOR THE PRODUCTION OF COMPOUNDS BY GAS REACTIONS AND APPARATUS THEREFOR. CHARLES B. JACOBS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 27, 1919. Serial No. 326,763. 20 Claims. (Cl. 204—31.)



1. The process of producing compounds by gas reactions and substantially independently of the solubility phenomena of the hereafter-named gaseous element relative to the hereafter-named fluid, which includes electrolyzing an electrolytic fluid containing an element liberatable as a gas and combinable with a gaseous second element, mechanically minutely dividing a body of said gaseous element, and mechanically, as distinguished from and substantially independent of working by virtue of the solubility of said gaseous element in said fluid, bringing the divisions of said body into intimate, direct contact with said first named element at the moment of its liberation from the fluid.

1,376,208. ELECTRIC COOKING-RANGE. FRANK KUHN and JAY A. HAND, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 21, 1918. Serial No. 218,407. 7 Claims. (Cl. 219—19.)

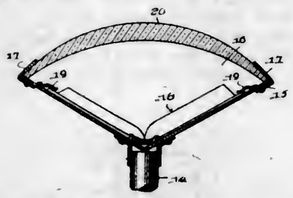


1. In an electric stove, the combination with an open rectangular frame, of a plurality of heating units supported on said frame, and a plurality of shields apertured to receive the respective units and interchangeably mounted on said frame to close the open spaces thereof.

1,376,209. ELECTRICAL HEATING UNIT. FRANK KUHN and JAY A. HAND, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 25, 1919. Serial No. 273,080. 3 Claims. (Cl. 219—41.)

1. An electrical heating unit, comprising a flattened tube closed at one end, a plug or cap secured to the opposite end and recessed to be in open communication with the interior of the tube, an insulated resistor inserted in the flattened tube, said insulated resistor and flattened tube being in good heat conducting engagement, a terminal on said resistor projecting into the recess in the plug, an insulator block in said recess slitted for the passage of said terminal therethrough, and means for connecting said terminal to external conductors mounted on said insulator block.

1,376,210. AIR-DEFLECTING DEVICE FOR WINDOW-FRAMES. FRANK W. LANCASTER, Philadelphia, Pa. Filed Apr. 3, 1920. Serial No. 370,925. 6 Claims. (Cl. 98—21.)

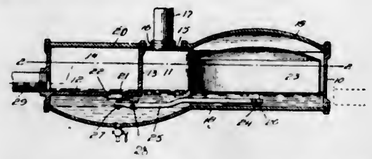


6. A device of the character described including a pivotally mounted post having a brace arm thereon providing an eyelet having recesses therein; a deflecting vane; a rod on said vane having a portion spaced from the vane; a lug on said rod adapted to enter one of said recesses; means for clamping said rod to the post, said lug, when the clamping means is released, being adapted to be swung, with the vane, into a position to slide through said eyelet, said rod having nubs thereon extending in a direction at an angle to said lug and adapted to be moved into said recesses and locked therein by said clamping means after said vane has been turned; and an extension strip movably connected to said vane and having a notch for embracing said post; substantially as described.

1,376,211. PROCESS OF EXTRACTING OILS, FATS, AND FATTY ACIDS. RALPH H. MCKEE, New York, N. Y. Filed May 24, 1919. Serial No. 299,465. 5 Claims. (Cl. 87—6.)

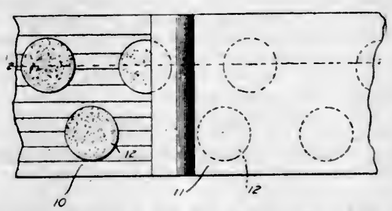
1. The process of extracting oils, fats and fatty acids which consists in dehydrating oil-containing material and subjecting such dehydrated material to the solvent action of liquid sulfur dioxid.

1,376,212. BOOKSTAND. EDNA MAYHEW, Great Bend, Kans. Filed Oct. 5, 1920. Serial No. 414,767. 3 Claims. (Cl. 45—80.)



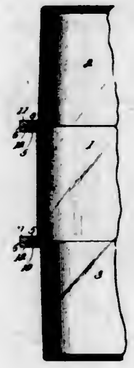
1. A device of the character described comprising a base, a standard rising therefrom and longitudinally adjustable, a frame carried upon the upper end of said standard and designed to support a book, a transparent cover for said frame, and means for effecting a turning of the leaves from the exterior of the frame.

1,376,213. REED-PROTECTING DEVICE. GIOVANNI C. MAZZERI, Virden, Ill. Filed Feb. 2, 1918. Serial No. 215,094. 1 Claim. (Cl. 84—383.)



In a device of the class described, the combination with the body of a wind instrument and a reed carried thereby, of a plate extending longitudinally of the reed and between the latter and the mouthpiece of the instrument, said plate having upwardly extending flanges engaging the edges of the reed, and having frictional contact therewith permitting of adjustment with reference to the free end of the reed.

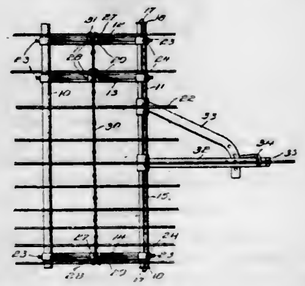
1,376,214. STEAM-TRAP. HOWARD H. MEAD, Quincy, Mich. Filed Sept. 24, 1919. Serial No. 325,967. 2 Claims. (Cl. 137—103.)



1. In a trap of the class described, a casing including a laterally enlarged chamber at one end and an elevated expansion chamber at the other end, said elevated chamber having an intake valve and a discharge opening, a lever poised near one end and attached at its shorter end to the valve, and a float within the enlarged chamber and pivotally supported on the longer end of the lever.

1,376,215. ROOFING. CHARLES C. MILLARD, O'Neill, Nebr. Filed Sept. 20, 1919. Serial No. 325,075. 1 Claim. (Cl. 154—41.)

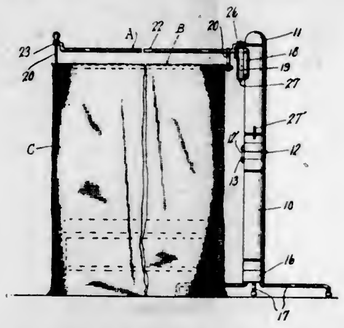
A roof structure including a sheathing, a roofing, and a plurality of disks interposed between the sheathing and roofing at spaced points over the area of the latter, said disks being coated on both sides with an adhesive substance to provide a connection between the sheathing and roofing.



1,376,216. THREE-PIECE METALLIC SHIPPING-BARREL. GEORGE EUGENE MITTINGER, Youngstown, Ohio. Filed May 18, 1920. Serial No. 382,326. 6 Claims. (Cl. 220—5.)

1. A three-piece knock down barrel, comprising a central section having laterally extending flanges at its ends, two end sections each having closed outer ends and annular laterally extending flanges at their inner open ends, all said flanges having their inner edges approximately straight and normally in engagement and their outer edges normally separated to receive a packing between them, and a clamping ring having an outwardly tapered groove in its inner side engaging the separated outer edges of the flanges for drawing them toward each other to hold the straight portions of the flanges firmly together and compress the packing between the outer separated edges of the flanges.

4. A three section barrel comprising a central section having at each end an annular laterally extending flange, two sections having closed outer ends and laterally extending flanges at their inner ends coöperating with the flanges of the central section, means for clamping the flanges toward each other, one end section having a smaller diameter than the central section to nest therein and the other end section of small diameter than the first-mentioned section to nest therein, whereby a close nesting of the parts is accomplished.



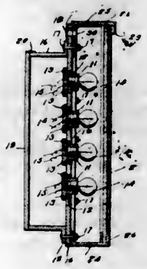
1,376,217. WIRE-FENCE MACHINE. HARRY MOFFETT, Lincoln, Ill. Filed Mar. 8, 1920. Serial No. 364,210. 3 Claims. (Cl. 140—19.)

1. A wire fence machine comprising a pair of standards, one of the standards including a longitudinally

slotted shell and an adjustable core therein, adjustable line wire hooks engaged in the core and working through the slot in the shell, means for fastening the core in adjusted position in the shell, and cross heads disposed horizontally and connecting the standards, each cross head having an intermediate arm provided with a terminal notch to receive a stay.

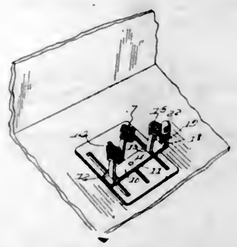
1,376,218. SUPPORT FOR PROTECTIVE COVERINGS. NOEL W. MORANT, New Orleans, La. Filed Dec. 4, 1920. Serial No. 428,303. 2 Claims. (Cl. 5—14.)

1. A structure of the character described comprising a standard, a frame including spaced upper and lower sections of substantially U shaped formation, means for connecting said sections together, arms pivotally connected to the uppermost section and designed to support the frame upon the standard, said frame being susceptible of being folded when separated from the standard.



1,376,219. GARMENT AND STAY THEREFOR. CHARLES MUNTER, New York, N. Y. Filed Nov. 9, 1920. Serial No. 422,762. 6 Claims. (Cl. 2—76.)

1. A garment provided with a stay having an opening therein at substantially its longitudinal center and means for securing the stay to the garment, said means comprising an eyelet passing through the stay opening and the garment body material and gripping the garment body material and the stay around the opening.

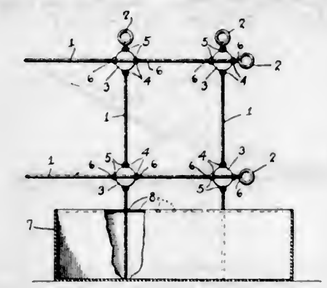


1,376,220. ILLUMINATED LICENSE-PLATE. GEORGE HENRY NEEDHAM, Newark, N. J., assignor of one-half to George Jacob Needham, Newark, N. J. Filed May 17, 1919. Serial No. 297,741. 1 Claim. (Cl. 40—132.)

An illuminated license plate comprising a lamp carrying member having spaced openings therethrough, lamp sockets secured in said openings, lamps removably mounted in said sockets and extended outwardly, an outer casing having inturned flanges around its inner side engaged against the outer face of said lamp carrying member, a transparent plate removably secured in the outer side of said outer casing, a cover for said outer casing normally closed over the upper edge of said transparent plate, a comparatively small rear casing having outturned flanges

around one edge engaged against the rear face of said lamp carrying member opposite the flanges of the outer casing, connecting members secured through the edge portions of said lamp carrying member and through the parallel flanges of the said outer and rear casings, a tube extended into said rear casing for current conducting wires leading to the lamp socket, and a normally closed door for the rear side of said rear casing.

1,376,221. AUTOMOBILE-LOCK. CHARLES R. NORDIN, Omaha, Nebr. Filed Sept. 29, 1919. Serial No. 327,078. 1 Claim. (Cl. 70—126.)

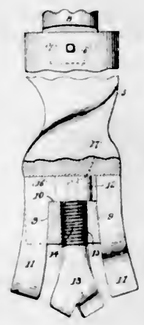


A locking device for automobiles of the type wherein a reverse pedal is disposed for movement between the planes of the clutch and brake pedals, the same comprising a composite bar constituting relatively movable members consisting of plates pivotally connected in superposed relation and at substantially intermediate points in their lengths, each plate being formed with a notch adjacent each end, the two notches in each plate being formed in opposite edges of said plate whereby those in opposite plates constitute complemental means forming seats for engagement respectively with the said clutch and brake pedals, and means for securing said plates in co-extensive relation to dispose the intermediate portions in the path of movement of the reverse pedal.

1,376,222. FRAME. THOMAS W. O'CONNOR, Brooklyn, N. Y. Filed Oct. 18, 1919. Serial No. 331,654. 1 Claim. (Cl. 45—24.)

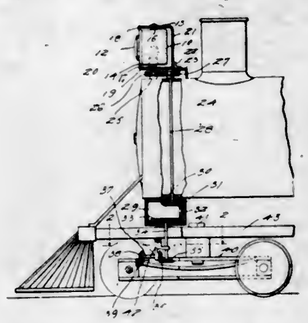
A stretching frame comprising two pairs of rods having an eye formed at one end of each rod and the other end pointed, circular holding plates for the rod, each having

two pairs of spring wings thereon, one pair of wings extending in an opposite direction from the other pair and



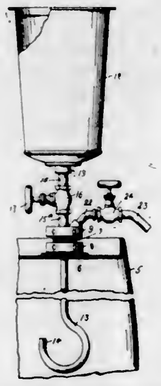
said wings having holes therein to receive the rods, finger engaging tabs on the wings for pressing said wings toward each other and means for holding the material to the rods.

1,376,223. EAR-TAG. ARTHUR A. PANNIER, Salt Lake City, Utah. Filed Nov. 14, 1919. Serial No. 337,921. 2 Claims. (Cl. 40—3.)



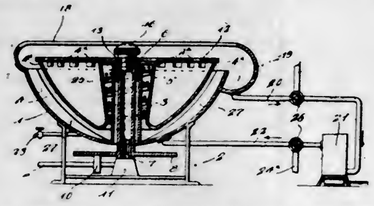
1. In an ear tag, a main plate, prongs integral with and bent at an angle from the edge of the plate, said prongs comprising flat portions with straight blunt edges and beveled portions with sharpened ear-piercing edges, and keeper means adapted to be locked to the plate on the other side of the ear by said prongs and spaced from the plate a distance determined by the length of said blunt edged portions of the prongs.

1,376,224. COAL-DRILL. JOHN PASZKO, Tamaroa, Ill. Filed Nov. 9, 1920. Serial No. 422,903. 5 Claims. (Cl. 255—69.)



1. A drill of the class described comprising in combination with a spiral rotatable drill body having a transverse opening adjacent its lower end, a pair of outer cutter bits extending longitudinally of said drill body at opposite sides thereof and projecting beyond the lower end of the same, a pair of lateral lugs rigid with the outer cutter bits and projecting into said transverse opening in overlapping relation, said lugs being provided with mating recesses, and an inner cutter bit member detachably connected to the lower end of the drill body and provided with a dowel formed to fit the space provided by said recesses of the lateral lugs whereby the outer cutter bits are rigidly detachably fastened in position.

1,376,225. CONTROLLING DEVICE FOR HEADLIGHTS. GLOVER FRANKLIN PENNINGTON, Tuscumbia, Ala. Filed June 24, 1920. Serial No. 391,507. 1 Claim. (Cl. 240—62.)

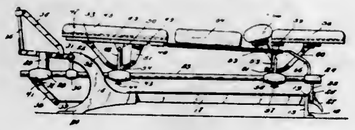


In a device of the class described, the combination with a headlight and a truck of a locomotive, of a supporting frame for rotatably mounting the casing of the headlight, a gear casing beneath the boiler, a plurality of intermeshing gears within said gear casing, a shaft extended upwardly from one of said gears and through the upper wall of said gear casing, a second shaft extended downwardly from another of said gears and through the lower wall of said gear casing, connections between the upwardly extended shaft and the casing of the headlight to rotate the latter a limited distance in either direction, a segmental rack carried by said truck and arranged concentrically with respect to the pivotal point of said truck, and connections between said segmental rack and the downwardly extended shaft to operate the intermeshing gears within said gear casing upon turning of the truck in either direction.

1,376,226. SAFETY LIQUID-DISPENSING APPARATUS. GILBERT H. POOR, Milwaukee, Wis. Filed June 12, 1920. Serial No. 388,553. 6 Claims. (Cl. 221—67.)

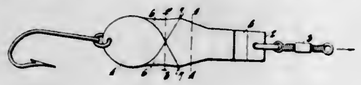
1. In an apparatus for dispensing liquids, a hollow plug, a water container, a water outlet pipe connected with the container and extending below the hollow plug, and a dispensing pipe communicating with the plug above the discharge terminal of said outlet pipe.

1,376,227. WASHING-MACHINE. HECTOR RABEZZANA, Flint, Mich., assignor of one-half to Axel A. Carlson, Flint, Mich. Filed June 17, 1920. Serial No. 389,748. 3 Claims. (Cl. 68—37.)



1. A washing machine comprising a stationary tub provided with a centrally disposed upstanding tubular imperforate part, an article container in the tub, being provided with a central apertured tubular part surrounding the first named tubular part and serving to permit passage of fluid from the tub between itself and the adjacent tubular part into the container, the latter being increased in diameter toward its top, and a cover for the container, the latter being provided with finid escape openings adjacent the cover.

1,376,228. AUTOMOBILE-POLISH. PIERRE A. RALLY, Tucson, Ariz. Filed July 13, 1920. Serial No. 395,921. 2 Claims. (Cl. 134—24.)



1. A dust proof automobile polish composed of gum mastic, coloring material, naphthalene and alcohol.

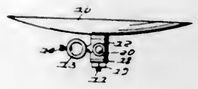
1,376,229. CHIROPRACTIC TABLE. WALTER B REPEAT, Dunkirk, N. Y. Filed Apr. 12, 1920. Serial No. 373,194. 2 Claims. (Cl. 128—73.)

1. A device of the character described comprising a pair of spaced parallel horizontal supporting rods, supports therefor, a pair of members longitudinally slidably adjustable upon said rods, a head support angularly adjustable upon one of said members, a chest support adjacent said head support, a legs support carried by the other of said members and including a relatively stationary section and a hinged section, means for tilting said hinged section, and a spring supported abdomen engaging member suspended between said head and legs supports.

1,376,230. ARTIFICIAL TROLLING-BAIT. GILBERT ROBERTSON, Vancouver, British Columbia, Canada. Filed July 22, 1920. Serial No. 398,057. 5 Claims. (Cl. 43—45.)

1. A trolling bait, comprising an elongated body of thin sheet metal, one end to which the trolling line is connected being square across and substantially parallel in width therefrom toward the other end with a transverse groove adjacent the trolling line connection, the other end to which the hook is connected being spoon-shaped, the concavity of the spoon directed to the side opposite the groove.

1,376,231. ORDNANCE. AUGUSTUS SMITH, Roselle, N. J., assignor to Bergen Point Iron Works, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 14, 1916. Serial No. 131,290. 12 Claims. (Cl. 89—40.)

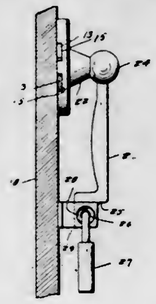


1. In coast defense ordnance and the like, a traveling support, a gun mounted thereon in fixed position with relation to azimuth pointing, and a track curved on the arc of a true circle approximately tangent to the longitudinal axis of the gun and having a known angle and distance relation to the base line of the range-finding survey system, on which track the support is traveled for azimuth pointing of the gun.

2. In coast defense ordnance and the like, a traveling support, a gun mounted thereon in fixed position with relation to azimuth pointing, and a track curved on the arc of a true circle approximately tangent to the longitudinal axis of the gun and having a known angle and distance relation to the base line of the range-finding survey system, on which track the support is traveled for azimuth pointing of the gun, and means for forcing the gun support to travel in the arc of a true circle on said track when the gun is pointed.

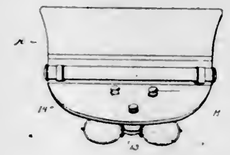
9. In coast defense ordnance and the like, a traveling support, a gun mounted thereon, tracks on which said support travels, and friction shoes sliding on said tracks together with means carried by the support for moving the shoes, said means being sufficient to overcome the sliding friction of the shoes on the track, but insufficient to overcome any considerable inertia of the shoes developed by a sudden movement of the gun support.

10. In coast defense ordnance and the like, a traveling support, a gun mounted thereon susceptible of angular elevation, and a track on which said support travels and gearing operated by the wheels of the support on recoil after firing for lowering the gun to position for reloading.



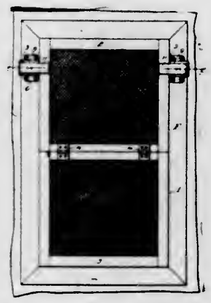
1,376,232. REVERSIBLE-DISK ATTACHMENT FOR CORN-PLOWS. CHARLES W. SMITH, Chambersburg, Ill. Filed May 21, 1919. Serial No. 298,725. 3 Claims. (Cl. 64—66.)

1. The combination with a cultivator disk of a mounting provided with a thimble constituting a bearing for the disk spindle, and a sleeve rigidly related with said thimble with its axis at right angles to that of the thimble and adapted for engagement with a plow standard.



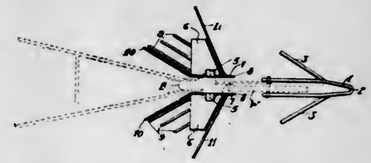
1,376,233. DOOR-FASTENER. LAWRENCE L. SWAN, East Liverpool, Ohio. Filed Jan. 27, 1920. Serial No. 354,382. 2 Claims. (Cl. 292—6.)

2. A lock including a plate for attachment to the object to be locked, bolts, means on the plate to support the bolts for free sliding movement to locked and unlocked positions and complete removal from the plate, said bolts having gear teeth, a pinion meshing with said teeth, a handle to operate said pinion, and an abutment for



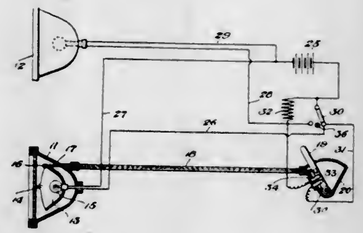
the handle to normally prevent sufficient movement of the handle to disengage the pinion and teeth.

1,376,234. EYEGLASS-HOLDER. JAMES A. TAYLOR, Waco, Ky. Filed May 11, 1920. Serial No. 380,508. 2 Claims. (Cl. 2—106.)



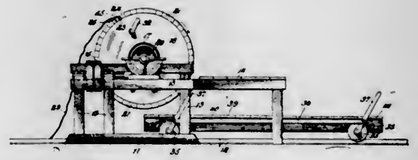
1. A device of the character described comprising a plate detachably secured upon the underside of a cap vizor, said plate being provided at its rear end with a tongue having a lip and having its edges at the sides of the tongue rolled to form bearings, a resilient yoke including a loop journaled within said bearings and engaged by said lip whereby to hold the yoke in adjusted angular positions, eye glasses carried by said yoke, and catch means for holding said glasses and yoke against the underside of the vizor.

1,376,235. WINDOW-SCREEN FASTENER. EMIL TROPH, Madrid, Nebr. Filed July 2, 1920. Serial No. 393,666. 6 Claims. (Cl. 292—80.)



1. The combination with a frame having a removable closure; of a fastener for said closure comprising a base plate, a resilient holder carried thereby having a combined cushioning and gripping member for contact with the sash, and means to hold said member engaged with the sash.

1,376,236. AGRICULTURAL IMPLEMENT. IRVING THOMAS ULLRICH, Wolcott, N. Y. Filed Nov. 26, 1919. Serial No. 340,885. 2 Claims. (Cl. 55—139.)

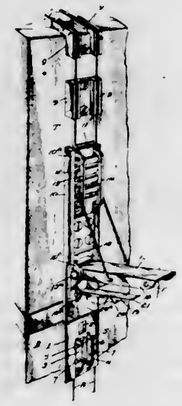


1. The combination with a wheel cultivator, of an onion harvesting attachment comprising an elongated track clearing runner straddling the cultivator wheel in position to be propelled ahead of said wheel, an outwardly extending fender carried on each side of the track clearing runner in position to bend down the onion tops, cutting blades on each side of the cultivator rearward of the wheel, soil separating tines projecting rearwardly from the blades, and an upstanding guide member at the inner end of each of the blades, and having outwardly curved rear ends positioned to direct the severed onions outwardly.

1,376,237. LIGHTING SYSTEM FOR MOTOR-VEHICLES. CHARLES H. VOSS, Hypoluxie, Fla. Filed Nov. 1, 1920. Serial No. 421,158. 3 Claims. (Cl. 240—7.)

1. The combination with a pair of electric head lamps for vehicles arranged to normally illuminate the roadway directly in front of the vehicle, of simultaneously operated means for directing the rays of light from one lamp to one side of the roadway and for dimming the light of the other lamp.

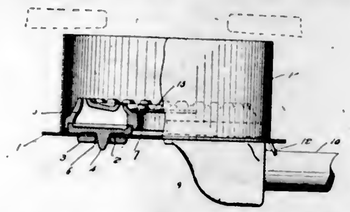
1,376,238. METHOD OF AND APPARATUS FOR TREATING LEATHER. CHARLES L. WHITNEY, Conneaut, Ohio. Filed May 1, 1920. Serial No. 378,298. 21 Claims. (Cl. 149—14.)



1. The method of treating hides and skins which consists in setting out a hide on a drum and mechanically rotating the latter, and then transferring the hide from the drum directly to a movable drying frame, such transference being effected by the relative movement of said drum and frame without manually handling the hide.

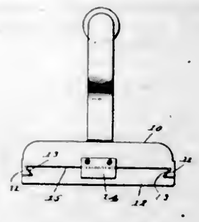
1,276,239. BOTTOM FOR SOAP-BOXES. DANIEL E. WILLIAMSON, Gates, Tenn., assignor of one-half to Ben N. Burleson, Gates, Tenn. Filed May 20, 1920. Serial No. 382,886. 3 Claims. (Cl. 45—28.)

1. A container for soap or the like having inwardly projecting means to prevent contact of the soap directly with the surface of the container to thereby provide a space for circulation of air around the soap, the container having drain openings and tubular projections depending from the container at the openings to rest upon a support and space the container therefrom to reinforce the container, prevent the undue entrance of foreign matter and facilitate the entrance of air.



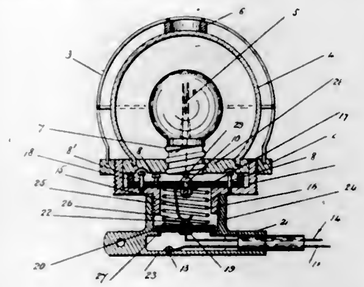
1,376,240. TRUNK-STRAP AND FASTENER THEREFOR. HOMER S. WITHAM, Jacksonville, Fla. Filed Oct. 20, 1920. Serial No. 418,307. 10 Claims. (Cl. 24—206.)

5. The combination with a trunk strap composed of a high grade steel wire; of a plate secured to one end of said wire and adapted to be secured to a trunk body, another plate to be attached to the trunk top, a slide carried by said last mentioned plate and having a plurality of longitudinally spaced teeth on its outer face, a lever fulcrumed at one end on said plate, a rod connected with said lever intermediate its ends and adjustably engaged with the teeth of said slide, and coöperating means carried by said lever and the other plate for locking the lever engaged with the plate, said means comprising a spring pressed clutch member carried by said plate, the lever having an aperture for engagement by said catch member.



1,376,241. GAS-BURNER ATTACHMENT. WILLIAM E. WRIGHT, Charlotte, Mich., assignor of one-half to Rollo Marple, Charlotte, Mich. Filed Mar. 2, 1920. Serial No. 362,797. 2 Claims. (Cl. 126—214.)

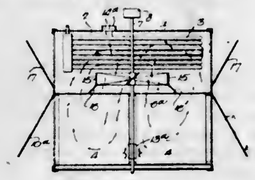
1. A gas burner attachment comprising the combination with a centrally apertured burner and the gas feed pipe and burner supporting member, of a plate engaged upon said gas feed pipe and said supporting member, a portion of said plate being positioned beneath the burner,



a heat reflecting member mounted on said plate and surrounding the burner, and a heat reflecting plate mounted on said burner over the central aperture thereof.

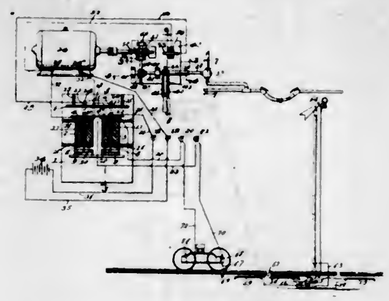
1,376,242. FLATIRON. FRITZ L. AST, Los Angeles, Calif. Filed Mar. 9, 1920. Serial No. 364,495. 1 Claim. (Cl. 68—26.)

A flat iron comprising a body formed at its side edges with depending undercut flanges defining a longitudinal groove dovetailed in cross section, said flanges and grooves intersecting the curved sides of the iron at points spaced rearwardly from the point of the iron body, a detachable bottom of the same size and shape as the bottom of the body and having at its side edges grooves for conforming engagement with said flanges, all the edges of the detachable bottom being flush with the edges of the body, and a retaining plate secured upon the rear end of the body and engaging against the rear edge of the detachable bottom.



1,376,243. SAFETY-LAMP. NICHOLAS ALBERT AUERT, Longmont, Colo., assignor of one-half to Claus H. Lehbank, Longmont, Colo. Filed Sept. 8, 1920. Serial No. 408,904. 4 Claims. (Cl. 240—17.5.)

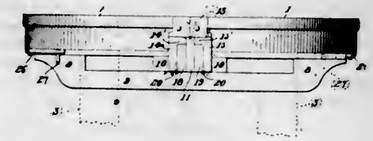
1. In a safety lamp, a supporting base provided with a guide, a disk slidable in the guide, an electric lamp and a frangible lamp globe carried by the said disk, a retaining device bearing on the lamp globe and operating normally to hold the lamp in circuit, a vertically adjustable ring secured to the said guide and operating to adjust the



pressure of the retaining device on the lamp globe, means for completing the lamp circuit when the said disk is in its normal position, and means for sliding the disk automatically in its guide, when the lamp globe is broken, so as to break the circuit.

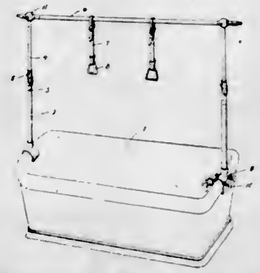
1,376,244. DRIER. ELWOOD B. AYRES, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 27, 1920. Serial No. 384,573. 5 Claims. (Cl. 34—39.)

2. The combination in a drier, of a casing; a drying chamber having two compartments within the casing located side by side; a fan located in one drying compartment so that the air will be circulated by said fan through said compartment, returning through the adjoining compartment and through the heating chamber.



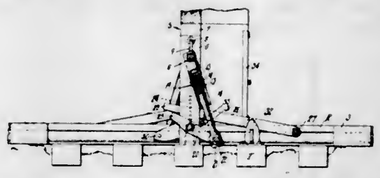
1,376,245. ELECTRIC TRAIN-STOP. GEORGE B. BAILEY, Linton, Ind. Filed Aug. 3, 1918. Serial No. 248,110. 3 Claims. (Cl. 246—195.)

1. In a device of the class described, the combination with an emergency air brake valve of a locomotive, of a tubular member positively engaging the valve stem, a lever mounted at one end of the tubular member, a shaft telescopically engaging the tubular member, a toothed disk carried on the shaft, a spring-heid latch engaging the teeth of said disk, a motor, connections between the motor and the said shaft, an electrical supply means for the motor, a cut-out inserted between the motor and its supply means, means for throwing the motor into circuit with its supply means, and means carried by the lever and engaging the spring-held latch whereby when the motor is put in motion, the valve is operated and the cut-out automatically operated and the latch released from the disk.



1,376,246. EXTENSION-TABLE. GIOVANNI BALDI, Chicago, Ill. Filed Nov. 12, 1920. Serial No. 423,564. 1 Claim. (Cl. 45—112.)

In an extension table wherein end top sections are guided in their movements by a longitudinal guide frame, a transverse center board fixed to said frame, a plurality of hingedly connected leaves hinged to opposite sides of the center board, and depending flanges carried by the leaves adjacent the center board to provide lateral spaces



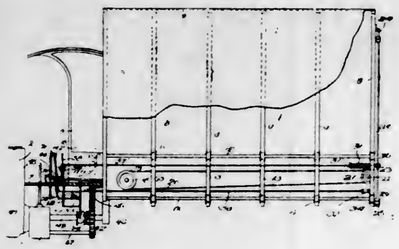
when the leaves are folded for the outer leaves to fold against the inner leaves and lie in the spaces adjacent the center board.

1,376,247. SAFETY DEVICE FOR BATHTUBS. MINNIE RIDGEWAY BISHOP, Chicago, Ill. Filed Oct. 21, 1919. Serial No. 332,159. 3 Claims. (Cl. 4—2.)

1. The combination of a bath-tub and an overhead support overhanging the tub and affording a hand-hold for a person in standing posture getting into and out of the tub or standing in the tub.

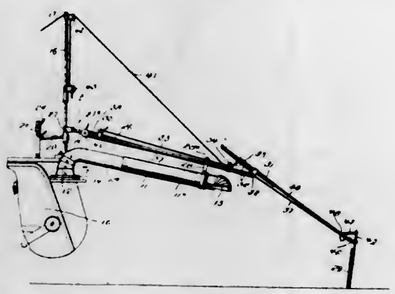
1,376,248. MINE-DOOR-OPERATING MECHANISM. GIUSTO BOGGIO, Royalton, Ill. Filed Nov. 26, 1919. Serial No. 340,838. 4 Claims. (Cl. 246—308.)

1. The combination with a doorway having a door mounted to swing in a vertical plane, depressible members on opposite sides of said doorway located in the path of travel, and connections between said members and door operated independently on the depression of the respective member to open the door, one of said members being connected with one side of the door and the other with the other side.



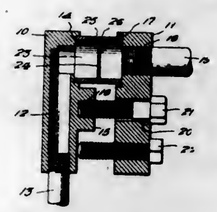
1,376,249. POTATO-BAGGING DEVICE. JOHN J. BUEHLER, Alliance, Ohio. Filed Jan. 10, 1919. Serial No. 270,528. 6 Claims. (Cl. 226—58.)

1. In a bagging device, a sack-holding frame mounted upon a truck and having means for supporting a sack



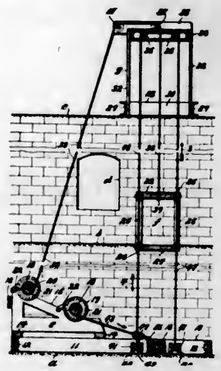
with the mouth distended, an article elevating means, and a two-part discharge chute having its two sections pivotally connected together, one of the sections of the chute being carried by the said frame and the other section thereof pivotally connecting with the first said section and fixedly connected with the elevating means and embodying a circular-shaped element partially surrounded by upturned annular flanges and a U-shaped frame connecting said flanges with the elevating means.

1,376,250. COLLAPSIBLE TRUCK-TOP. LUTHER S. CAMP, Rock Mart, Ga. Filed Dec. 31, 1918. Serial No. 269,061. 6 Claims. (Cl. 296—105.)



1. In a motor vehicle, in combination with a platform and transmission mechanism thereof, of an extensible and collapsible top operably mounted on the platform, manually controlled means on the platform and operably arranged between the top and the transmission mechanism for extending or collapsing the top, and manually operable means mounted on the platform and engageable with the top for releasably holding the top in an extended position.

1,376,251. BACK-STOP ATTACHMENT FOR STRAW-STACKERS. WALTER W. CARSON, Tipton, Ind.; Livina Pearl Carson, Tipton, Ind., administratrix of said Walter W. Carson, deceased. Filed Aug. 30, 1918. Serial No. 252,038. Renewed Mar. 17, 1921. Serial No. 453,067. 3 Claims. (Cl. 302—10.)



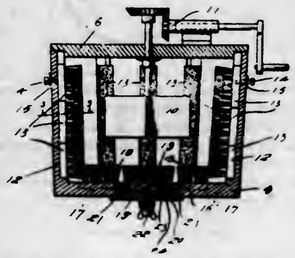
2. A back stop or straw restraining attachment for stackers, having a barrier screen for arrangement in the path of discharge from the stacker spout, a foldable mast or post and means for securing the same in its upright or operative position, a main boom mounted for vertical and lateral swinging movement relative to said mast or post, a sleeve tiltably mounted at an intermediate point of its length upon the outer end of the main boom, an auxiliary boom slidably mounted in said sleeve for extension relative to the main boom and having said screen connected with the forward end thereof, and means for relatively adjusting and securing said elements to maintain the screen in operative relation with the stacker spout.

1,376,252. OIL-BURNER. VAUGHN R. CHADBOURNE, Beaumont, Tex. Filed Feb. 28, 1920. Serial No. 362,148. 1 Claim. (Cl. 158—75.)

An oil burner comprising a section provided at one end with a recess and provided with an oil conducting passage leading into said recess, a second section disposed in spaced relation to said first named section and provided with a recess opposite said first named recess and further provided with a steam conducting hole leading into its recess, a tip formed as a shell having its ends disposed within said recesses and provided intermediate its ends with a partition, the shell having its periphery provided with a circumferential slot at one side of the partition and provided at the other side of the partition with a second circumferential slot disposed at an angle with respect to the first named slot, and means for clamping said tip between said sections, said means comprising a cap screw passing through a hole in the second named section and threaded into the first named section, and a set screw threaded through the second named section and engaging the first named section.

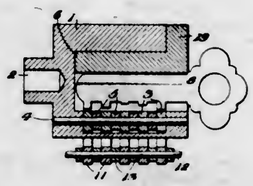
1,376,253. ELEVATOR. ALFRED C. CLARK, Philadelphia, Pa., assignor of one-half to Joe Scott, Philadelphia, Pa. Filed Aug. 27, 1920. Serial No. 406,383. 6 Claims. (Cl. 187—2.)

1. In an elevator having flexible guideways, an elevator platform, an overhead structure, and hoisting mechanism, the combination of means for adjusting the flexible guideways to accommodate the elevator for use at different heights, a landing platform, means for supporting the elevator platform independent of its hoisting mechanism, and steadying devices for the flexible guideways to prevent lateral swinging of the elevator platform when in use.



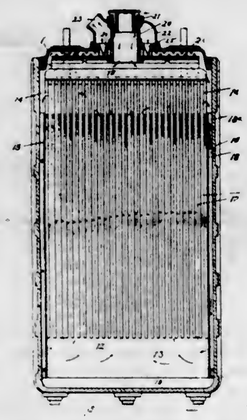
1,376,254. PENCIL-POINTER. ORA R. CLOUGH, Ladysmith, Wis. Filed May 21, 1920. Serial No. 383,241. 2 Claims. (Cl. 120—89.)

2. A device of the class described comprising a cylinder formed of two parts, a strip of sand paper placed around the cylinder and having its end edges passing between portions of the two parts, a plate at each end of the cylinder for holding the two parts together, a handle



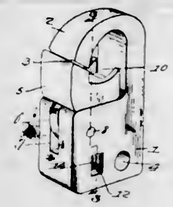
member having a shoulder thereon and passing within the cylinder and engaging the end edges of the strip and flexible supporting means secured to the handle.

1,376,255. WASHING-MACHINE. FLORENCE T. CLUGG, Spencer, Wis. Filed Jan. 28, 1920. Serial No. 354,733. 2 Claims. (Cl. 68—24.)



1. A washing machine including a receptacle provided with an opening in the bottom thereof and further provided with dove tail grooves in the inner face of the bottom radiating from the opening and vertical dove tail grooves upon the inner face of the walls of the receptacle, a brush removably engaged in each of the grooves, and a brush accommodated in the opening in the bottom and serving to retain the brushes in the bottom against movement in one direction.

1,376,256. LOCK. ATTILIO CONTE, Buenos Aires, Argentina. Filed July 16, 1920. Serial No. 396,738. 3 Claims. (Cl. 70—46.)

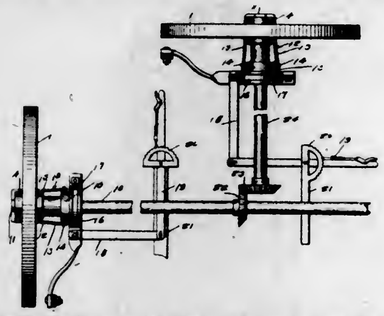


1. In locks with keys having radial teeth of variable length a lock operating device which by means of the key causes the operation of the lock in any suitable manner, said device substantially consisting of an outer cylinder provided with a series of strikers, an epicyclic axle whereon the strikers are mounted, the heads of said strikers being of variable length, a series of pawls arranged opposite to said strikers and bearing on the same, hooks formed on said pawls and adapted to lock said outer cylinder against rotation, an inner cylinder concentric with the outer cylinder and provided with a longitudinal slot for the insertion of the key which by its rotation will move the strikers outward and thereby cause them to release the hooks on said pawls from locking engagement with the outer cylinder, the said inner cylinder being provided with a means for imparting rotation to the outer cylinder after the latter has been released from the pawls, substantially as above described and for the purposes set forth.

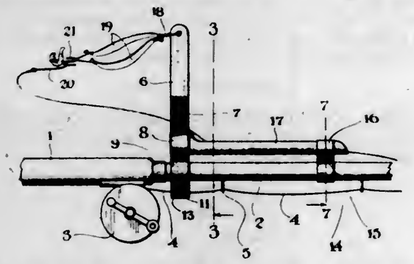
1,376,257. STORAGE BATTERY. THOMAS R. COOK, East Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed May 11, 1918. Serial No. 233,836. 9 Claims. (Cl. 204—29.)

1. A storage battery comprising a receptacle containing positive and negative plates and an electrolyte, there being spaces at the top and bottom of the cell for the lateral flow of the electrolyte, and ribbed spacing members between the sides of the outermost plates and the adjacent sides of the receptacle forming vertical passageways for the downward flow of the electrolyte from the space at the top to the space at the bottom of the cell.

1,376,258. LOGGING-HOOK. DILLARD H. COX, Seaside, Oreg. Filed Feb. 11, 1919. Serial No. 276,283. 1 Claim. (Cl. 24—241.)



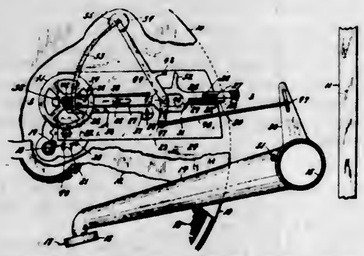
A device of the kind described comprising a body formed with a hook and having a slot, a keeper for the hook having a disk-like shank lying in said slot, a pintle mounted in the body and crossing the slot and pivotally engaging the said disk-like shank, the said shank being formed with a notch, the body being formed on one side with a rectangular slot and on the other side with a counterbore connecting with said slot, a rectangular-shaped latch element mounted in the rectangular slot and engaging with the notch in the shank when the keeper is in closed position for the hook, and a spring disposed in the counterbore and operatively connected with the latch to normally move the latter into engagement with a notch in the shank.



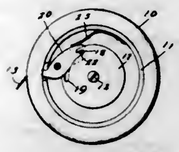
1,376,259. WHEEL. WILLIAM E. CRAWFORD, Devils Lake, N. D. Filed Feb. 12, 1919. Serial No. 276,580. 1 Claim. (Cl. 192—76.)

In a wheel of the character described, a hub provided with an outer annular flange having a central annular groove, said hub being of tubular construction, a rim rots-

tably mounted about the hub flange, a plurality of rods radiating from said hub and slidable through the same and through the flange, the inner end portions of said rods projecting into the interior of the hub, brake heads carried by the rods at the outer ends thereof and positioned in the groove of said flange, a tapered spreader operable in the bore of the hub and movable into engagement with the inner ends of said rods for forcing the same outwardly so as to force said brake heads into tight frictional engagement with the inner surface of said rim and a yoke connected at its intermediate portion to the spreader, and having its end portions passing transversely through the hub and slidably received therein.

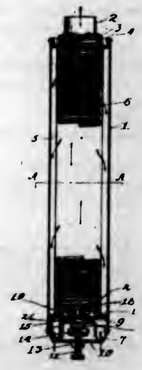


1,376,260. LINE-CASTING DEVICE. DAVID J. DAVIS, Seymour, Conn. Filed July 16, 1920. Serial No. 396,701. 2 Claims. (Cl. 43—19.)



1. In a casting attachment for the lines of fishing poles, a pan supported on the pole and designed to receive the folded portion of a fishing line therein, a yoke at the rear of the pan, a spring sling connected to the yoke, and an S-hook designed to engage with the fish hook, and to be received on the sling, as and for the purpose set forth.

1,376,261. TALKING-MACHINE STOP. ISAAC L. DAVENPORT, Camden, N. J., assignor of one-half to William W. Armstrong, Camden, N. J. Filed July 18, 1919. Serial No. 311,696. 5 Claims. (Cl. 192—116.)



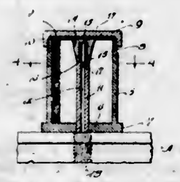
1. A stop for a talking machine including a turn-table, comprising a rotatable shaft, a pinion rotatable thereby, a brake rod mounted to slide and to swing, a gear on the rod and normally out of mesh with said pinion, a brake element on said rod and adapted in brake-applied position to engage the turn-table, an operating rod, a pivoted crank arm, a rack on the crank arm and a pinion on the brake rod and adapted to be brought into contact with the rack when said brake arm is actuated to move the gear thereon into mesh with the first mentioned pinion.

1,376,262. REEL FOR EYEGLASS-CHAINS. COLUMBUS F. DENNY, Wilson, N. C. Filed May 17, 1920. Serial No. 382,094. 6 Claims. (Cl. 242—98.)

1. An eye glass reel comprising a casing, a stationary arbor mounted thereon, a reel mounted for free rotation upon the arbor, a coiled spring connecting the reel and arbor for rotating the former in one direction, a stop secured to the arbor, a spring actuated dog engageable with the stop to prevent rotation of the reel in either direction and means engageable by the chain, whereby the dog may be operated to permit rotation of the reel.

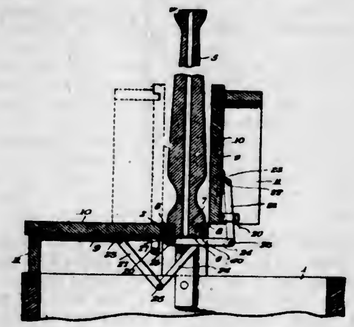
1,376,263. MUFFLER FOR EXHAUST-PIPES. VICTOR LEE EMERSON, Philadelphia, Pa. Filed Dec. 11, 1919. Serial No. 344,088. 6 Claims. (Cl. 137—160.)

1. In a muffler, a housing having an inlet and outlet, an expansion member leading from said inlet and carrying a plate at the end thereof, adjustable retaining means located at the outlet end of said casing, a retaining means attached to said plate, and a resilient means located between said retaining means for controlling the movement of said plate and expansion member.



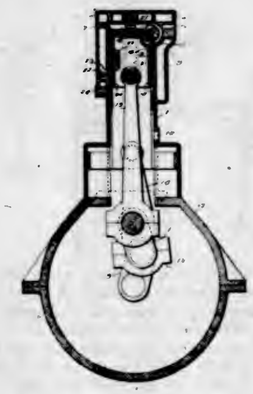
1,376,264. PAPER-TRIMMING MEANS. HARRY F. FORTNER, Clinton, Ind. Filed Sept. 14, 1917. Serial No. 191,466. 5 Claims. (Cl. 164—61.)

1. The combination of the side walls of a main frame, a rod extending transversely between said side walls, open frame-like bearings adjustable on said rod in the direction of the length thereof and pendent from the rod and having opposite openings in their inner side walls adapted for the passage of paper, means to adjustably fix said bearings to the rod, feed rollers arranged between said bearings and having shafts extending through apertures in the bearings and journaled in the side walls of the frame, knives mounted on to rotate with and slide longitudinally of said shafts, said knives having lapped portions outwardly beyond and opposite said openings in the inner side walls of the bearings, springs mounted on the



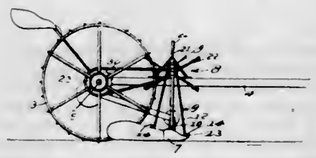
shaft of one feed roller and interposed between the outer walls of the bearings and the knives on said shaft, and springs mounted on the shaft of the other roller and interposed between the inner walls of the bearings and the knives on said shaft.

1,376,265. OIL-CUP. JOHN HENRY FRALEY, Tiffin, Ohio. Filed Nov. 11, 1919. Serial No. 337,161. 3 Claims. (Cl. 184—70.)



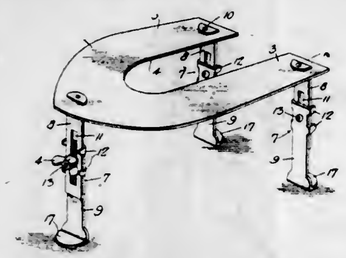
1. In a lubricating oil cup comprising a cylindrical body, having a closed bottom, a screw threaded closure for the top of said body, a coaxially positioned tubular column having a reduced upper end extending in proximity to the said closure, said column being provided with a lateral aperture defining an oil passage between the column and the interior of the body, a truncated socketed head loosely seated upon the reduced upper end of the said column and slightly spaced from the closure, said head normally closing the lateral aperture but free to vibrate between the closure and column to open said passage and screw threaded means for securing said cup to a part to be lubricated.

1,376,266. CABINET. WILLIAM H. FRIEDLINE, Meyersdale, Pa., assignor to Modernola Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed May 13, 1919. Serial No. 296,866. 17 Claims. (Cl. 217—60.)



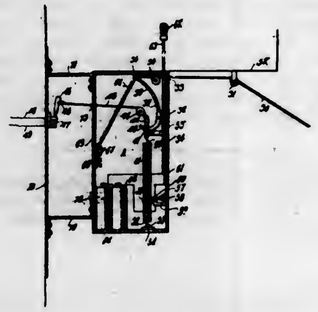
1. The combination of a cabinet body open at its upper end and having supporting means bridging said opening, lids hingedly connected to said supporting means, means interposed between the underside of the supporting means and the lids for limiting the opening movements of said lids, and adjustable means at the underside of the supporting means for regulating said limiting means.

1,376,267. ENGINE. CLAYTON H. FROST, Orange, N. J. Filed May 6, 1920. Serial No. 379,227. 3 Claims. (Cl. 123—66.)



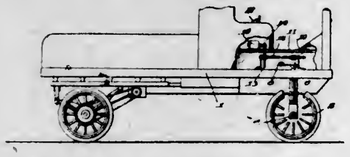
1. An engine comprising a cylinder, a pair of pistons having throws of different lengths arranged therein, one of said pistons being disposed within the other, the cylinder being provided with an inlet, means for establishing communication between said inlet and the space between said pistons, means for establishing communication between said space and the interior of said cylinder, the interior of said cylinder being provided with an exhaust opening, the cylinder wall being provided with a passage communicating with said opening, an exhaust chamber arranged on one side of said cylinder, said passage communicating with said exhaust chamber, and an exhaust outlet communicating with said exhaust chamber, the communication being controlled by the travel of the pistons.

1,376,268. REEL ATTACHMENT FOR MOWING-MACHINES. VIRDIE L. FISHER, Fairplain, W. Va. Filed May 25, 1918. Serial No. 236,496. 1 Claim. (Cl. 56—221.)



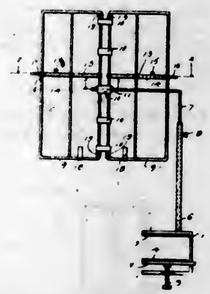
A reel attachment for mowing machines comprising a pair of supports each of which embodies a standard and braces formed integral therewith at the top, the said braces being inclined downwardly and diverging and terminating in attaching feet, means for securing the attaching feet to a mowing machine so as to position the said supports in spaced relation to each other, the standard of each support being formed near its upper end with a series of superposed openings constituting bearings, the bearing openings in one standard alining with the corresponding openings in the other, a shaft journaled in alined openings in the standard, the shaft being mountable in any pair of bearing openings in the two stems whereby its height from the ground may be varied, a reel carried by and rotatable with the shaft, the reel being designed for positioning over the cutting means of the mowing machine, and means for transmitting motion to the shaft from the mowing machine on which the attachment is carried.

1,376,269. SADIRON-STAND. HARRIET L. GALBRAITH, Washington, D. C. Filed Apr. 2, 1920. Serial No. 370,781. 2 Claims. (Cl. 68—27.)



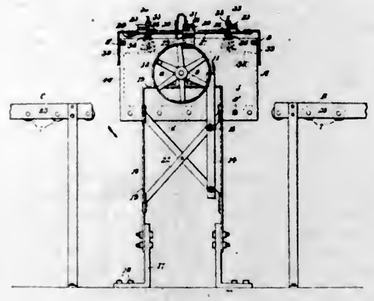
2. A device to enable a flat-iron, when used for cooking and heating purposes, to stand in inverted position, said device comprising a body provided with an opening to permit the insertion of the handle of the iron, and supporting legs depending from said body, said legs being adjustable to permit their length to be varied to conform to iron handles of different heights, whereby the handle of the iron and the supporting legs rest upon the same plane surface, and the weight of the iron and any article placed thereon is borne by the handle of the iron.

1,376,270. PUMP CONTROL. JOHN FRED GATES, Corcoran, Calif. Filed Feb. 13, 1918. Serial No. 216,897. 3 Claims. (Cl. 200—18.



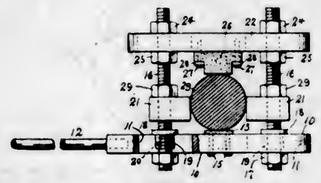
1. A circuit controlling device including separate switch arms, an elastic coupling element adapted to be connected to the switch arms and to be tensionably stretched upon the setting of the arms in a predetermined position, means for holding under given conditions, the coupler element as stretched between the switch arms and means for releasing the coupler element in an emergency whereby it relaxes and shifts the switches to another predetermined position.

1,376,271. ELECTRIC STEERING SYSTEM. HORACE EZEKIEL GOUGE, Bristol, Tenn. Filed Aug. 6, 1920. Serial No. 402,029. 1 Claim. (Cl. 180—80.)



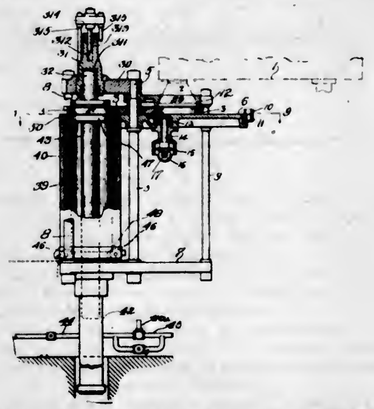
An electric steering apparatus for motor vehicles, comprising the combination with the steering wheels, of vertical shafts carrying said wheels, means interconnecting said wheels for simultaneous movement, a motor having a gear connection with one of said shafts, a source of current, a control switch in circuit with said source of current and said motor, a shaft connected with said switch and with said wheel interconnecting means whereby said switch may be automatically moved to break said circuit upon said wheels being turned to a dangerous angle.

1,376,272. BOOK-HOLDER. WILLIAM R. HANDLEY, Wichita, Kans. Filed Feb. 10, 1921. Serial No. 443,980. 1 Claim. (Cl. 45—82.)



A book holder comprising a clamp member, a tube carried by the clamp member, a rod having angularly disposed end portions one of which is adjustably secured in the tube, frames pivotally connected together at their inner ends by means of links, one of the links having a sleeve which receives one end of the rod, guides disposed transversely across the frames at points between their upper and lower edges, hooks mounted at the lower portions of the frames, and hooks adjustably mounted in the guides, one of the said hooks having a spring pressed bill end pivoted portion.

1,376,273. LIQUID-MIXING MACHINE. EARL L. HANSELL, Pittsburgh, Pa. Filed Dec. 31, 1920. Serial No. 434,343. 27 Claims. (Cl. 259—81.)

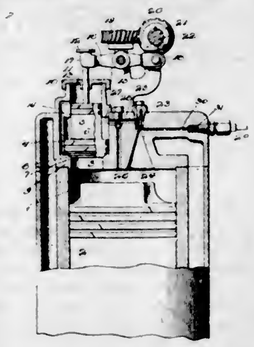


1. A liquid mixing machine including a rotatable mixing device, means to facilitate feeding of crates of bottles from a filling machine to one end of said mixing device, the mixing device being constructed with open ends and provided with a bottom normally in the same plane as said means, whereby the crates may be readily fed from the latter onto said bottom, quickly operable means for releasably holding the crate in the mixing device while it is rotated, and means at the other end of the mixing device and arranged in substantially the same plane as the bottom of the latter, for permitting the crates to be readily moved out of the mixing device onto the same and for delivering the crates to a desired point of discharge.

1,376,274. CRANK-SHAFT GRINDER. ELIJAH F. HAYS and CHARLES E. GARRISON, Mount Vernon, Ill. Filed July 7, 1920. Serial No. 394,598. 2 Claims. (Cl. 51—205.)

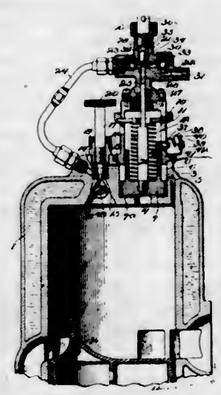
1. An implement of the class described, comprising a base member carrying a feed plate, supporting posts in spaced relation rising from said base member, means for adjusting the posts longitudinally of the base member, supporting blocks carried by said posts, a follower member movably engaging said posts, means for adjusting the follower member on the posts, and an abrading element carried by said follower member.

1,376,275. CAKE-FORMING AND CAGE-LOADING MECHANISM FOR OIL-PRESSES. NELSON B. HENRY, Atlanta, Ga., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed June 1, 1920. Serial No. 385,405. 12 Claims. (Cl. 100—50.)



1. Cake forming mechanism having in combination a die member having a die opening formed therethrough; a table on which said die member is rotatably mounted and which serves as a closure for the lower end of said die opening, said table being formed with an opening therethrough across which said die opening passes during the rotation of said member; means for actuating said die member step-by-step to alternately present said die opening to a cooker outlet and bring it to rest over the table opening, and means for ejecting the contents of the die opening while the latter is at rest opposite said table opening.

11. Cake forming and cage loading mechanism having in combination a cage; an open ended forming die movable from a cooker discharge outlet to and over the cage; a plate within the die above the charge and a plunger above the die and cage to compact and form the charge and expel the compacted and formed cake from the die into the cage, against the resistance of a yielding plunger.



1,376,276. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. HENRY B. HIGGINS, Jr., Denver, Colo. Filed Apr. 13, 1918. Serial No. 228,322. 7 Claims. (Cl. 123—33.)

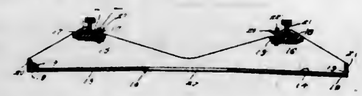
1. In an internal combustion engine, the combination with a main chamber containing a compressible fluid, means for alternately compressing and expanding said fluid, a supplemental chamber in communication with said main chamber, and adapted to receive a charge of said fluid therefrom, pneumatically operated means in said

supplemental chamber actuated by the compression in the main chamber, after receiving an initial movement from a moving part of said engine, to additionally compress said charge, and eject it for utilization in said main chamber, substantially as described.

1,376,277. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. HENRY B. HIGGINS, Jr., Denver, Colo. Filed Apr. 13, 1918. Serial No. 228,323. 15 Claims. (Cl. 123—33.)

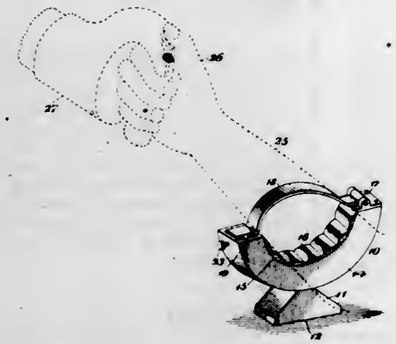
1. An attachment for internal combustion engines provided with a working cylinder and piston, a source of fuel supply, an ignition element and an atomizing element, comprising means actuated by the compression of air in the working cylinder, whereby a charge of compressed aeriform promoter of combustion and of liquid fuel are simultaneously delivered through the atomizing element to the combustion chamber, and means for timing the delivery of the compressed aeriform promoter of combustion and liquid fuel to the combustion chamber with reference to the instant of operation of the ignition element, substantially as described.

1,376,278. LOCK SNAP-HOOK. CHARLES HOKANSON, Crookston, Minn., assignor of one-third to Emanuel Hokanson and one-third to Emma Koeppe, Crookston, Minn. Filed Mar. 21, 1919. Serial No. 283,969. 1 Claim. (Cl. 24—233.)



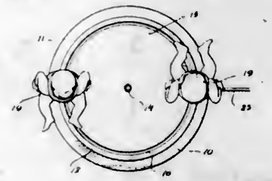
A device of the kind set forth comprising a body portion formed with a hook and a slot therethrough in substan-

tially the plane of the hook, a keeper comprising a body portion corresponding in thickness to the thickness of the slot carried in and movable in the latter, the body portion of the keeper being formed with a pair of spaced legs of which one is of greater width than the body portion but of equal thickness to the hook, the hook and the thicker leg being formed respectively with transversely disposed abutting shoulders engaging each other in the closed position of the keeper, the said thicker leg spanning the



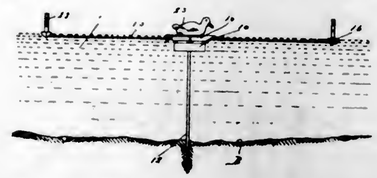
open side of the hook, a pin passing through the body portion of the hook and across the slot therein, the body portion of the keeper being formed with an arcuate slot through which the pin passes and with a tail portion in engagement by the finger, and a flat spring housed within the slot of the body portion of the hook and having its terminal bearing on the body portion of the keeper and tending to keep the thicker leg thereof yieldingly in a position of closure for the open side of the hook.

1,376,279. METALLIC RAILWAY-TIE. HARRY JACOBS, Lordsburg, N. Mex. Filed Dec. 28, 1920. Serial No. 433,563. 2 Claims. (Cl. 238—30.)



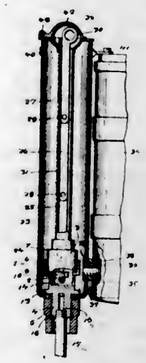
1. A metallic tie comprising a bottom having a substantially horizontal central portion on its lower side, said bottom including downwardly inclined portions between the horizontal member and the end portions of the tie, sides extending upwardly from the bottom member and higher at points designed for location beneath the rails, than at other portions of the tie, said sides having their upper edges gradually inclined downwardly toward the center of the tie, from the higher portion thereof, rail supporting members connecting the higher portions of the sides, and end members connecting the sides and projecting upwardly from the bottom, apertures being formed at the ends of the tie to prevent the accumulation of water.

1,376,280. ARMREST. THOMAS J. JAMES, Philadelphia, Pa., assignor to Thomas Thompson, Philadelphia, Pa. Filed Nov. 10, 1919. Serial No. 336,988. 3 Claims. (Cl. 78—46.)



1. A riveter's arm rest comprising a base, an arm body mounted to turn on the base, and a locking strap mounted to swing on the arm body for locking the arm of the riveter in the arm body.

1,376,281. TOY. THOMAS P. JESSEN, Newark, N. J. Filed June 15, 1920. Serial No. 389,143. 2 Claims. (Cl. 46—40.)



1. A toy comprising a casing having an open top, a centrally arranged standard therein, a disk positioned within the top of the casing and spaced from the edges of the opening to provide a platform having an annular groove, a bar rotatable upon the central standard and having its extremities extending through the annular groove, figures carried by each end of the bar, a toothed member carried by the bar and means including spaced arms engageable with the toothed member whereby the bar may be rotated upon the standard to move the figures around the platform.

1,376,282. DECOY. SHERMAN KAUFFMAN, Brownville, Nebr., assignor of one-third to Charles Gillespie and one-third to Homer Gillespie, Brownville, Nebr. Filed Sept. 20, 1920. Serial No. 411,424. 2 Claims. (Cl. 43—2.)

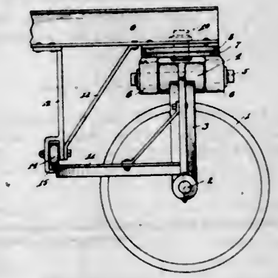
1. A device of the character described comprising a central supporting block, an anchoring rod extending centrally through said block and adapted to be stuck into the bottom of a stream, said block being rotatable upon said anchoring member, a plurality of radial arms extending from said block, a member carried by the outer end of each arm and supporting a decoy, and a plate pivoted upon the underside of each body and movable in one direction whereby said plates will serve as propelling means when the device is disposed within a current.

1,376,283. FLUID-CONTROL LOCK FOR TANKS. ROBERT S. KLOPFENSTEIN, Wichita, Kans., assignor to National Lock-in-Tank Company, Wichita, Kans., a Corporation. Filed July 19, 1918. Serial No. 245,790. 1 Claim. (Cl. 251—7.)

In a fluid control lock, the combination of a tank having an inlet and an outlet for fluid, a rectilinearly movable

spring-pressed valve for controlling a passage in the tank intermediate said inlet and outlet, a lock in the tank and embodying a revoluble element actuatable by a key and provided with a tappet stud eccentrically disposed to coöperate with the valve, a tube extending outwardly from the lock to a wall of the tank; said tube being adapted for the manipulation therein of the key complementary to the lock.

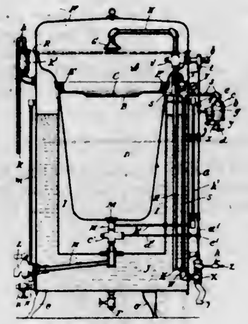
1,376,284. CLAMP. JOHN A. KOHN, North Fond du Lac, Wis. Filed June 1, 1920. Serial No. 385,666. 1 Claim. (Cl. 248—34.)



A hanger including a flat leg having a slot adjacent to the bottom thereof and having openings above the slot, pipes arranged against one or both of the faces of the hanger and designed to be supported thereon, clamps for the pipes each comprising a member having a U-shaped body and straight extensions at the end of the body, the straight extension on one end of each of the clamps providing tongues, and the straight extensions on the opposite ends of the clamps being centrally cut away to receive the tongues of the adjacent clamps therein, the tongue of the lowermost clamp designed to be passed through the opening in the hanger, and the straight extension of the uppermost clamp having an aperture therethrough registering with one of the openings in the hanger, securing means passing through the aperture and opening, and bail members arranged to surround the hanger, the straight extension of the uppermost clamp, and the interengaging extensions of the remaining clamps between the pipes.

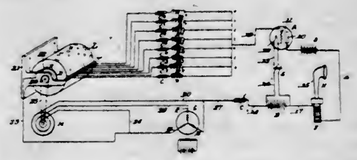
1,376,285. PROCESS FOR MAKING FIBERS. RUDOLF KNOH, Gersau, Switzerland. Filed Sept. 18, 1919. Serial No. 324,555. 1 Claim. (Cl. 92—6.)

A process for making cheap fibers which felt together not too densely, producing an absorbent, spongy sheet sufficiently strong to breaking and tearing strains and sufficiently durable for application to the manufacture of rough pasteboard to be saturated with tar or bitumen for roofing, linings or the like, which process consists in converting wood in the form of logs or other relatively large pieces, or ligneous or strongly silicious plants into fibers—without use of alkalis or acids—by boiling with water, or by steaming, and subsequently rolling out, crushing and grinding, so as to obtain the natural cellulose fibers without deterioration and not weakened by chemical agents.



1,376,286. STEERING-ROLLER FOR TRACTORS. JOHN S. LINGARD, Laporte, Ind. Filed Oct. 8, 1919. Serial No. 329,281. 2 Claims. (Cl. 280—109.)

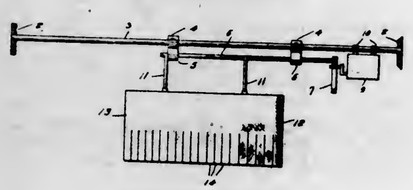
1. The combination with a pivoted yoke of a tractor having a steering roller therein, of a rearward thrust resisting member for said yoke, said member comprising a segmentally shaped bar formed from angle iron and arching the rear of the roller and having its ends connected to the arms of the yoke on each side of the roller, one flange of said segmentally shaped bar being horizontally disposed, a bracket carried by the tractor frame and extending downwardly to a point adjacent the horizontal flange, a roller carried by said bracket and having a raceway on the upper surface of said flange and a finger



carried by said bracket and extending inwardly under said horizontal flange and forming means for preventing downward movement of the horizontal flange.

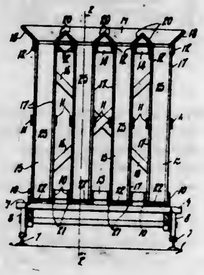
1,376,287. COFFEE-URN. JOHN LOUIS MEYFARTH, Brooklyn, N. Y. Filed July 25, 1918. Serial No. 246,661. 14 Claims. (Cl. 53—3.)

1. In a coffee-making urn connected with a boiling water supply, the combination of a ground-coffee receptacle having a discharge-opening covered with filtering material, a beverage jar having an air-tight connection with said opening and means for drawing liquid coffee, means for producing a vacuum in said jar, means for opening the jar to the atmosphere, and means actuated by the operation of the vacuum-producing means, for effecting the closing of communication between the atmosphere and the jar.



1,376,288. ELECTRICAL SYSTEM FOR PRODUCING MUSICAL TONES. FRANK EBENEZER MILLER, New York, N. Y. Filed Mar. 18, 1915. Serial No. 15,274. 13 Claims. (Cl. 177—7.)

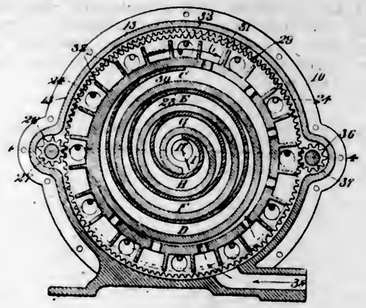
1. In a system for producing selected musical sounds, an audion; a plurality of selector circuits each containing



capacity and inductance selected and proportioned relatively to the frequency characteristic of a desired musical sound; a source of electrical energy for said circuits; an electrically operable sounding member separate and distinct from said audion and connected with said circuits for producing the desired musical sound under the influence of said audion; and means for making said selector circuits active selectively.

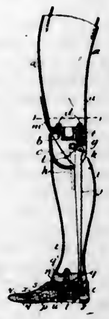
1,376,289. FAN FOR BEDS. LORENTZ O. REITAN, Haugesund, Norway. Filed Mar. 5, 1920. Serial No. 363,460. 1 Claim. (Cl. 230—7.)

A fan for beds comprising a supporting frame associated with a bed, a supporting rod carried by the frame and extending transversely of the bed, hangers adjustably secured to the rod, an operating shaft journaled in the hangers and extending parallel and in a plane below the rod, means for oscillating the shaft, arms formed on said shaft, a frame carried by said arms and disposed over the bed, and fabric secured to the frame and extending beyond the same at one end and having its free edge cut into a plurality of strips adapted to create a current of air by the oscillation of said frame.



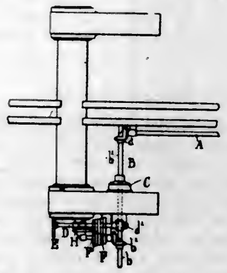
1,376,290. TRAVELING BLEACHING-FRAME. EDWARD TILLOTSON REYNOLDS, Chico, Calif. Filed Nov. 25, 1919. Serial No. 340,622. 7 Claims. (Cl. 34—17.)

3. A traveling bleaching frame comprising a plurality of spaced upright longitudinally-extending compartments, the sides of each compartment being open for circulation of gases, the tops of each compartment being open, a hopper surrounding the tops of all the compartments and extending beyond the ends and sides of the compartments, and peaked closures bridging the spaces between the compartments at their tops, said hopper and closures combining to guide material dropped from above into the compartments without waste or loss.



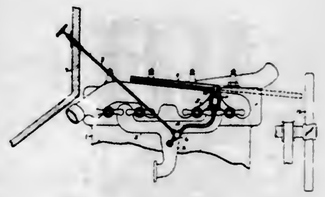
1,376,291. FLUID-COMPRESSOR. RETLOW ROLKERR, Oakland, Calif. Filed Feb. 26, 1918. Serial No. 219,295. 21 Claims. (Cl. 230—30.)

1. In a fluid compressor, a pair of volute vanes disposed about a single shaft, a means for rotating one of said vanes concentric with the shaft and the other of said vanes eccentric thereto, whereby the two vanes will



coöperate to force a volume of fluid along and between their convolutions and to the center thereof.

1,376,292. ARTIFICIAL LEG. EUGÈNE SAUZE, St. Etienne, France. Filed Sept. 5, 1918. Serial No. 252,784. 4 Claims. (Cl. 3—2.)



1. An artificial leg comprising a casing, a knee attached to the said casing, a leg adapted to turn on a horizontal axis in the knee, a rod within the said leg adapted to turn about an axis in the said knee eccentric to the axis on which the said leg turns, a cavity in the said foot and an elastic cushion of adjustable thickness within the said cavity upon which cushion the end of the said rod rests.

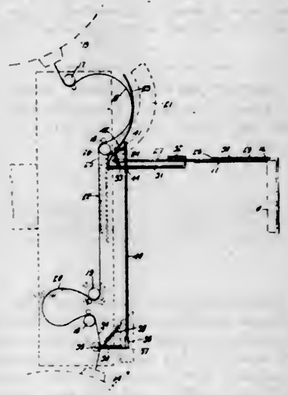
1,376,293. SPACING MECHANISM. RICHARD SHAW, Manchester, England, assignor to De Bergue & Company Limited, Manchester, England. Filed May 7, 1918. Serial No. 233,058. 4 Claims. (Cl. 73—34.)

1. In a feed mechanism, the combination of an intermittently operated driving shaft, a driven shaft intermittently rotatable in synchronism with said driving shaft, a normally stationary feed shaft loosely mounted on said driving shaft, epicyclic gearing connecting said shafts including a sun pinion secured to feed shaft, an internal gear secured to said driven shaft, and a spider secured to said driving shaft having planet gears rotatably mounted thereon and meshing with said sun pinion and internal gear, and manually operated means for rotating said feed shaft and sun pinion to vary the action of the epicyclic gearing.

1,376,294. ATTACHMENT FOR INTERNAL-COMBUSTION MOTORS. JOHN SHINE, Houston, Tex. Filed May 11, 1920. Serial No. 380,704. 1 Claim. (Cl. 123—122.)

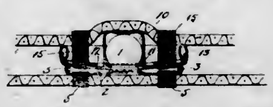
A motor attachment including an inlet conduit, one end of which enters the intake pipe of the motor and the other end of which lies upon the exhaust pipe of the motor and is movable so as to take cold air directly from the motor fan and a means operable from the dash of a vehicle for controlling said air inlet.

1,376,295. WRENCH. FRED M. SMITH, Taft, Calif. Filed May 21, 1920. Serial No. 383,049. 1 Claim. (Cl. 81—127.)



In a wrench, the combination with a shank having a toothed sector around its extremity and a main pivot through its body at the center around which said sector is struck, a collar slidable on said shank and having pawl teeth on its outer end, and a spring urging said collar outward: of a head including spaced wings defining a channel inclosing said sector, the wings being mounted on said main pivot and provided with ratchet sectors to be engaged by said pawl teeth, a rigid jaw carried by said head, and a jaw movable toward and from said rigid jaw and having a bar slidable through the head and provided with a toothed rack engaging said toothed sector.

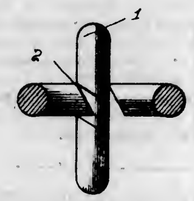
1,376,296. NUT-LOCK. CHARLES STEWART HASTINGS SNOW, Hampstead, London, England. Filed June 14, 1920. Serial No. 388,885. 1 Claim. (Cl. 151—19.)



A nut lock comprising a main split sleeve having the external surface tapering with that portion of such surface of greatest diameter plain and that portion of such surface of least diameter threaded in combination with an outer clamping nut having an interior bore corresponding to the exterior surface of the main sleeve and having a plain portion of the sleeve and a threaded portion to cooperate with the threaded portion of the sleeve, both the threaded and plain portions of the clamping nut exerting a clamping action on the main sleeve in the movement of the nut longitudinally of the sleeve.

1,376,297. SAFETY DEVICE FOR PICTURE-PROJECTING APPARATUS. JOSEPH W. SOUTH, Memphis, Tenn. Filed Apr. 21, 1920. Serial No. 375,516. 17 Claims. (Cl. 88—17.)

1. The combination with a picture projecting apparatus embodying a source of light, a film spanning a projecting aperture and film moving mechanism upon opposite sides of the aperture, of a rock-shaft horizontally mounted upon the apparatus, a closure for the source of light, a detent movable with the rock-shaft tending to normally hold the closure open, rock-shaft operating mechanisms on opposite sides of the aperture and means whereby a change in position of the film upon either side of the aperture moves the rock-shaft operating mechanisms from normality to release the closure.

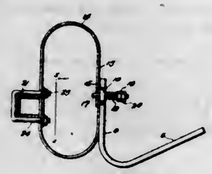


1,376,298. PRESS-STUD. BERNHARD STEINER, New York, N. Y. Filed July 28, 1920. Serial No. 399,536. 1 Claim. (Cl. 24—208.)

A separable fastener, consisting of a pair of members, each member having a peripheral flange, and one member

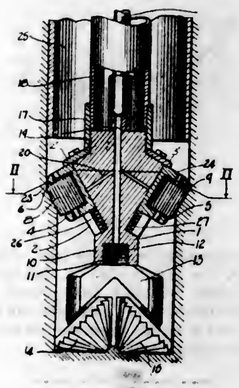
having a central socket and the other having a central stud for entry in said socket, one of said flanges having a stop abutment elevated above the face of the flange adapted to engage the face of the other flange and thereby limit the extent of insertion of said stud in said socket, said flanges having threaded holes by which said members may be sewn to the fabric by passing the threads from hole to hole and thereby leave the flange surface clear where engaged by the stop abutment so as to protect the thread against wear.

1,376,299. CHAIN. DENNIS L. SULLIVAN, Streator, Ill. Filed Sept. 2, 1919. Serial No. 321,192. 1 Claim. (Cl. 59—90.)



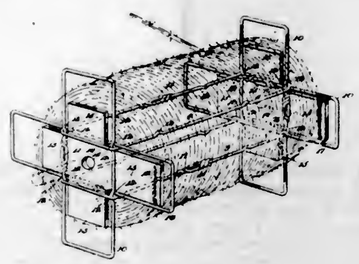
A link having an opening in one of its sides, the walls of said opening being parallel and at an acute angle to the longitudinal axis of the link, whereby a link of similar construction may be readily connected to the first named link, and secured against accidental disconnection therefrom.

1,376,300. BILLET-MANIPULATOR FOR ROLLING-MILLS. EDGAR THOMAS, Jarrow-on-Tyne, England. Filed Jan. 31, 1918. Serial No. 214,747. 9 Claims. (Cl. 80—48.)



7. In a billet manipulator for rolling mills, the combination of heads movable toward and away from each other and adapted to hold the work therebetween, a forehead pivoted on one head for engaging with the work and adapted to be swung by the reaction of its thrust against the work whereby to also turn the latter, and an extension projecting beyond one end of the turning face of the forehead and having a vertical surface adapted to be presented to the work when the same has been turned on its edge, substantially as described.

1,376,301. AUTOMOBILE-BUMPER. JAMES H. TOBIN, Erie, Pa. Filed Feb. 1, 1921. Serial No. 441,622. 4 Claims. (Cl. 293—55.)

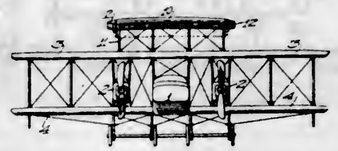


4. In an automobile bumper construction comprising substantially V-shaped hangers for mounting to the frame of an automobile, vertically arranged, elongated elliptical springs rigidly supported by said hangers, apertured ears formed in the free ends of said hangers and near the extremities thereof, clevis members passing through said ears for securing the free end of said springs to said hangers, anti-rattling means carried by said clevises to prevent vibration of said springs, a transverse bumper bar carried by the forward portion of said springs, attaching plates normally lying flush with the interior of said springs, removable, U-shaped bolts embracing the said bumper bar and secured to the attaching plates whereby the said bar may be raised or lowered with respect to the springs or entirely removed from the springs.

1,376,302. WELL-DRILLING DEVICE. JOHN B. WOOLDRIDGE, Kansas City, Mo. Filed Dec. 6, 1919. Serial No. 342,901. 6 Claims. (Cl. 255—73.)

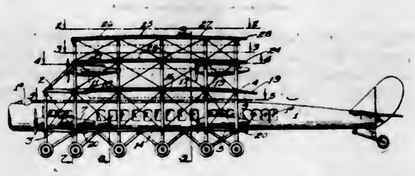
1. In a reamer and drill, a rotary head having a threaded upper end and provided with slotted, upwardly and outwardly inclined sides, the slots extending to points adjacent to the threaded upper end, rotary under-reamers slidably secured in said slots, the upward longitudinal movement of the under-reamers being effective in extending them radially with respect to the head so that they will ream a hole of progressively increasing diameter, a rod coupling receivable on the threaded end of the head, and means closing the upper ends of the slots.

1,376,303. REEL. JOHN YENNETT and EDWARD T. LONKERT, Atlanta, Ga. Filed Feb. 20, 1920. Serial No. 360,265. 3 Claims. (Cl. 242—115.)



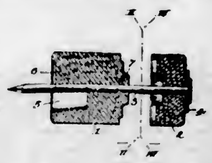
1. A reel consisting of crossed end frames, body frames having their ends engaged over corresponding end frames, and cruciform cheek plates fitted in and held by the end frames.

1,376,304. WIRE-FABRIC ARMOR-PLATE. CASIMIR ZEGLEN, Cleveland, Ohio. Filed June 7, 1917. Serial No. 173,261. 2 Claims. (Cl. 114—11.)



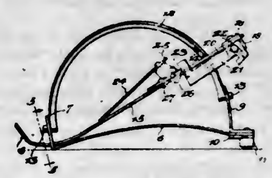
1. An armor plate containing a multiply woven wire fabric composed of relatively hard weft wires and relatively soft or flexible warp wires interwoven with the weft wires.

1,376,305. AEROPLANE. JOHN ZIEGLER, San Diego, Calif. Filed Sept. 9, 1920. Serial No. 409,138. 6 Claims. (Cl. 244—14.)



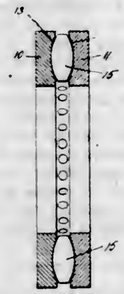
1. An aeroplane including, a pair of planes spaced apart, one above the other and another pair of planes positioned one above the other positioned behind the first mentioned pair of planes in suitable spaced relation, a cover plane positioned above said planes covering a portion of the space between the pairs of planes, and stabilizers, pivotally mounted on the sides of said cover plane.

1,376,306. AEROPLANE. JOHN ZIEGLER, San Diego, Calif. Filed Oct. 4, 1920. Serial No. 414,452. 7 Claims. (Cl. 244—14.)



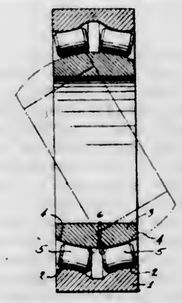
1. An aeroplane, comprising a pair of spaced apart biplanes with connecting planes positioned between the pairs of biplanes and a pair of spaced apart sustaining planes positioned one above the other over said biplanes.

1,376,307. INSULATOR. FRANK M. AMOS, Wheeling, W. Va., assignor to Wheeling Tile Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Apr. 9, 1920. Serial No. 372,549. 8 Claims. (Cl. 173—314.)



2. In an insulator, the combination of a cap piece; a base, said base and cap having alining bores, and said base having a groove formed in the inner wall thereof, said groove lying in a plane inclined with reference to the bore in the base; and a nail, said nail when passed through the bores contacting the wall of the groove and being deflected thereby whereby the nail and base will be held against separation through friction established between the nail and base while the cap may be moved on the nail toward and from the base for the placement of the wire to be clamped.

1,376,308. TRAP. LAWRENCE J. ANDREWS, Falk, Idaho. Filed Dec. 27, 1920. Serial No. 433,276. 4 Claims. (Cl. 43—92.)



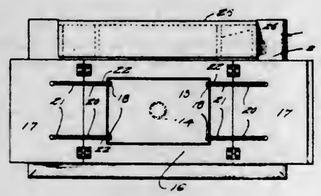
3. A trap comprising a base, jaws swingably mounted thereon, a flat spring fixed at one end to said base and tensioned to have closing action at its other end portion against said jaws, a cross member on said base below the free end of said spring, a trigger including side arms swingably mounted on said spring above said cross member, a cross piece connecting said arms and extending across the upper side of said spring, and detents on said arms arranged to engage said cross member and to hold said spring in set condition when the cross piece of the trigger is in raised position, and a pan arranged to hold said cross piece in that position.

1,376,309. ROLLER-BEARING. PERCY A. E. ARMSTRONG, New York, N. Y. Filed Apr. 13, 1917. Serial No. 161,719. 8 Claims. (Cl. 64—50.)

7. A thrust bearing comprising a pair of laterally spaced parallel race members having bearing surfaces on their adjacent faces, said surfaces being curved transversely in an arc of a circle, and a roller having its surface longitudinally curved in an arc of different radius than the radius of the bearing surfaces, and making substantially point contact with each of the bearing surfaces.

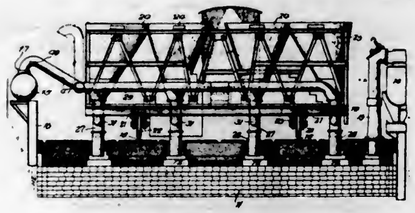
1,376,310. ROLLER-BEARING. PERCY A. E. ARMSTRONG, Watervliet, N. Y. Filed June 13, 1919. Serial No. 303,886. 11 Claims. (Cl. 64—39.)

1. A bearing comprising inner and outer race members each having transversely convex races located at an angle



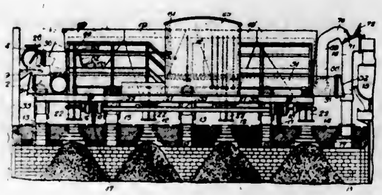
to each other, and two sets of rollers having concave surfaces inclined to each other and adapted to run respectively in said races.

1,376,311. COMBINED THRUST AND JOURNAL ROLLER-BEARING. PERCY A. E. ARMSTRONG, Loudonville, N. Y. Original application filed June 13, 1919. Serial No. 303,886. Divided and this application filed May 1, 1920. Serial No. 378,044. 2 Claims. (Cl. 64—62.)



1. A combined radial and thrust roller bearing comprising an inner race member having a convex transversely curved bearing surface of progressively increasing diameter from one side to the other, an annular outer race member having an opening therein of progressively increasing diameter from one side to the other, the increase in diameter being in the same direction in each case, said outer member having an inner transversely curved bearing surface, and a plurality of rollers between said bearing surfaces, said rollers having their axes converging in substantially a cone having its apex in the bearing axis, and said rollers being longitudinally concaved on a radius substantially greater than the radius of convex curvature of the bearing surfaces, whereby the bearing contact is confined to a relatively narrow region at about the middle of the rollers.

1,376,312. TYPEWRITER-DESK. MARGURITE E. BEARD, Westhoff, Tex. Filed Oct. 23, 1919. Serial No. 332,689. 1 Claim. (Cl. 45—52.)

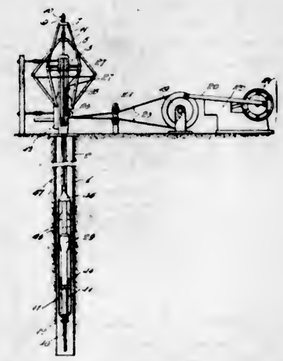


A desk comprising a body having a chamber, a platform located in said chamber for vertical movement and having grooves in its under face and said grooves located adjacent the side edges of said platform, said grooves extending into the end walls of said platform, strips secured to the top of the body and having grooves, doors hinged to said strips and when in one position adapted to close the chamber and when in another position adapted to project beyond the sides of the body to form comparatively wide supports, said doors having grooves in their hinged edges, rollers located in the second mentioned grooves and secured to the strips, and flexible elements secured in the first named grooves and passing through the second mentioned grooves and over the rollers and secured within the third mentioned grooves of the doors for raising and lowering the platform by said doors moving into chamber opening and closing positions, said grooves preventing lateral displacement of the flexible elements and permitting the doors when in one position to rest evenly on the strips.

1,376,313. COKE-OVEN-CHARGING CAR. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1918. Serial No. 264,964. 12 Claims. (Cl. 202—5.)

1. The combination of a coking oven provided with a coking chamber having a plurality of recharging openings and provided with a stationary main for carrying off the smoke incidental to the charging of such chamber, means for charging the coking chamber through said openings individually and independently of each other, and means for collectively connecting said openings with said smoke main during a charging operation, whereby smoke may pass through all of said openings to said main; substantially as specified.

1,376,314. COKE-OVEN SMOKE-DISCHARGING MEANS. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 16, 1919. Serial No. 330,990. 15 Claims. (Cl. 202—5.)



15. In a coke-oven, in combination: an elongated oven chamber provided with a plurality of smoke outlets respectively leading directly into the atmosphere; a smoke main; a gas collecting main; and means, operable at will, for selectively connecting in unison the several smoke outlets of the oven chamber with either of said mains; substantially as specified.

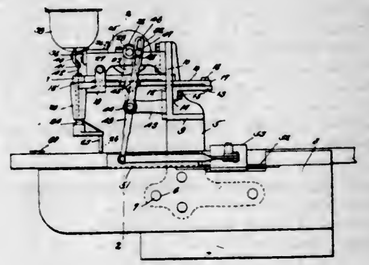
1,376,315. DOUBLE-ACTING PUMP AND OPERATING MECHANISM. SAMUEL T. BRIZENDINE, Kansas City, Mo. Filed May 13, 1920. Serial No. 381,141. 4 Claims. (Cl. 103—77.)

1. In a pump, a chamber having an inlet and an outlet, a valve ball in the chamber for closing the inlet, a guard strip positioned in the chamber and having its end portions secured to the walls thereof and its intermediate

portion bent to extend partially about the inlet, and a flange extending inwardly from the intermediate portion

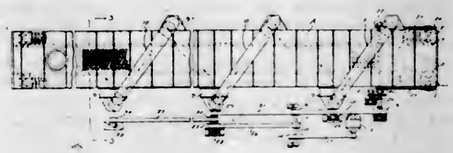
of the guard strip to limit movement of the valve ball through engagement of the flange by the valve ball when moved out of operative relation to the inlet.

1,376,316. PROJECTILE. CONSTANTIN CHILOWSKY, Paris, France. Filed Oct. 24, 1918. Serial No. 259,556. 11 Claims. (Cl. 102—26.)



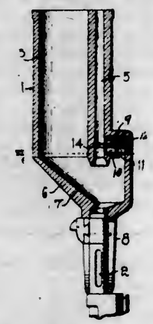
8. A projectile having means for reducing the resistance to its flight by heating the air around the nose of the projectile, comprising a receptacle for combustible connected to the front of the projectile, means for igniting the combustible and means for directing the burning gases of combustion around the nose of the projectile.

1,376,317. AUTOMATICALLY-OPERATING MECHANICAL HANDLING APPARATUS. ALBERT GUSTAVE CLAPIER, Chambon-Fengerolles, France. Filed Mar. 5, 1920. Serial No. 363,445. 3 Claims. (Cl. 254—93.)



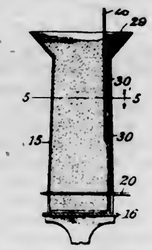
1. In apparatus for mechanically handling a load, a stationary support, a cylinder pivotally attached to the support and having a combined inlet and outlet port, a piston and a piston rod, a guide pulley, a flexible member passing over the pulley, and operatively connected at one end with said piston rod, a receptacle for a load suspended from the other end of the flexible member, a duct communicating at one end with a source of supply of motive fluid, a tubular conduit connected at one of its ends with said combined inlet and outlet port, means adapted to control communication between the second end of the tubular conduit and the second end of the fluid supply duct and the atmosphere, the said means becoming operative by the action of a pull transmitted through the flexible member to the piston rod in a manner to establish communication between the ends of the duct and conduit whereby the piston moves under the influence of the motive fluid flowing through the conduit and the cylinder port and retracts the said flexible member and the receptacle, substantially as described.

1,376,318. TOBACCO-LOOPER. FRANCIS M. COMSTOCK, Newbern, N. C., assignor to William S. Howell and C. D. Bradham, Newbern, N. C. Filed Aug. 6, 1919. Serial No. 315,724. 7 Claims. (Cl. 131—21.)



7. In a loop forming machine, a main bracket, an auxiliary bracket, a rotary shaft supported on the main bracket, a cam drum having cam grooves, splined on the rotary shaft, a swinging arm supported under the cam drum, means coöperating with the grooves of the cam drum for moving the cam drum longitudinally of the shaft, means connecting the cam drum and swinging arm to produce a relative movement of the arm with relation to the cam drum, an arm supported on the swinging arm, a looping finger, means on the second mentioned arm and engaging the cam grooves for moving the second mentioned arm laterally, and means for connecting the second mentioned arm and looping finger, whereby movement of the second mentioned arm produces a relative movement of the looping finger.

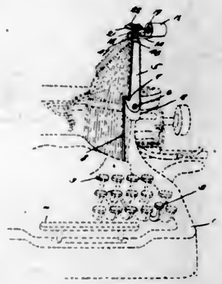
1,376,319. DRYING-KILN. SIDNEY E. CORNISH, Berkeley, Calif., assignor of one-half to H. H. Plummer, San Francisco, Calif. Filed Jan. 20, 1920. Serial No. 352,743. 5 Claims. (Cl. 34—12.)



1. A kiln, fans at one side of the kiln, and flues connecting the fans with the other side of the kiln, whereby a continuous circuitous circulation of air is provided transversely through the kiln.

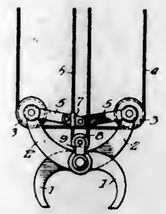
1,376,320. RIFLE-GRENADE. JOSEPH N. CROWE, Washington, D. C., assignor to C. C. Williams, trustee, Acting Chief of Ordnance, U. S. Army. Filed June 8, 1918. Serial No. 239,020. 4 Claims. (Cl. 42—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. The combination, with a rifle, of a grenade-discharger carried by the barrel thereof and provided with a grenade chamber, with a passage for the rifle projectile alined with the bore of the rifle barrel, whereby the rifle-projectile while traversing said passage upon the firing of the rifle acts as an obturator and checks the gases emerging from the end of the barrel, said gases collecting in said grenade chamber to propel the grenade therefrom, and with a valve actuated by the gases of explosion to close said passage.



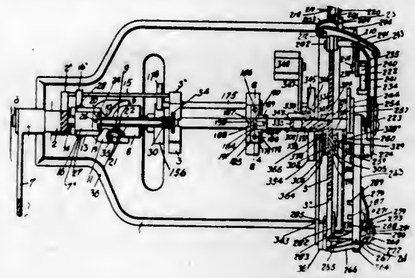
1,376,321. ART OF MAKING FACED CEMENTITIOUS PRODUCTS. ALFRED OWEN CROZIER, New York, N. Y. Filed June 14, 1918. Serial No. 239,926. Renewed July 21, 1920. Serial No. 398,044. 12 Claims. (Cl. 25—156.)

8. In the art of making faced cementitious products or articles, the improvement comprising establishing and maintaining a column of slush concrete of such height that the weight of the column will compact and unwater its lower portion, arranging below the column a pallet carrying on its upper surface a relatively thin body of cementitious facing material of substantially the same area as the bottom of the column, allowing the column to descend suddenly upon said relatively thin body of facing material whereby the same is subjected to the impact of the column and is thereby compacted and united with the column, and carving one or more faced, self-sustaining, unset articles from the compacted and unwatered lower portion of the column.



12. In the art of making faced cementitious products or articles, the improvement comprising forming and maintaining an upright body of wet, compacted, unwatered and unset concrete, causing said body to descend upon and unite to itself a facing layer of cementitious material, shaping from the faced lower portion of said body a faced, unset, self-sustaining article, inclosing said article in a lateral support, spreading upon the unset facing a layer of solid particles of the kind described, and exerting pressure upon the layer of solid particles to embed the latter in said facing.

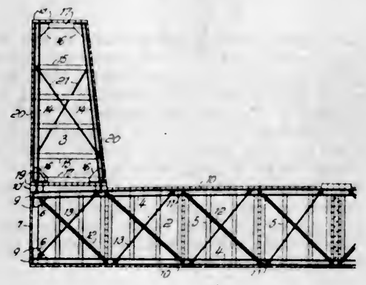
1,376,322. TYPEWRITER-ERASER. HOWARD M. CUTSHAW, Greeneville, Tenn. Filed Apr. 15, 1920. Serial No. 374,096. 3 Claims. (Cl. 197—181.)



1. In a typewriter, a frame; an arm pivoted to the frame; a key movably mounted on the frame; means for connecting the key with the arm; a motor mounted on the arm; an eraser driven by the motor and carried by the arm; and means responsive to the movement of the key for starting and stopping the motor.

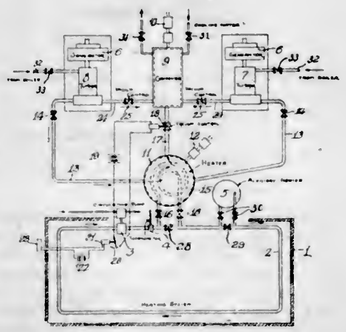
1,376,323. TONGS. HENRY D. DEAM, Benton Harbor, Mich. Original application filed June 17, 1918, Serial No. 240,313. Divided and this application filed Aug. 4, 1919. Serial No. 315,138. 3 Claims. (Cl. 114—51.)

1. In salvaging apparatus a pair of tongs having jaws and handles, a pulley pivoted to the end of each handle, a link pivoted by one end to each handle, the other end of said links being pivotally connected, and means for raising and lowering the connected ends of said links, whereby the jaws of said tongs may be opened or closed.



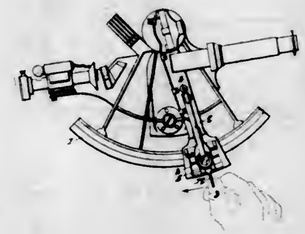
1,376,324. MANTLE SEWING-MACHINE. HERBERT EMMERE, Hamilton, Ontario, Canada. Original application filed Sept. 10, 1917, Serial No. 190,649. Divided and this application filed Mar. 9, 1920. Serial No. 364,502. 7 Claims. (Cl. 112—173.)

1. In a mantle sewing machine, the combination with the reciprocating needles thereof, of a pair of spring



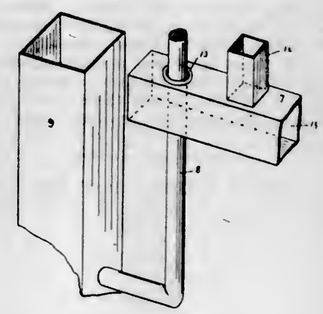
fingers designed to pass vertically through each of the eyes of the needles and to spread outward at their outer ends when passed through such eye and form receiving notches, means for gripping the cord in proximity to its ends and laying such ends into the receiving notches of the spring fingers and means for automatically drawing the spring fingers downward through the eyes of the needles.

1,376,325. FLOATING DRY-DOCK. GUNNAR C. ENGSTRAND, Brooklyn, N. Y. Filed Dec. 29, 1920. Serial No. 433,927. 3 Claims. (Cl. 114—45.)



1. In a floating structure, planking, quadrilateral frames comprising double flanged members to support the planking of two opposite sides of the quadrilateral section and single members to support the planking of the remaining sides of the section, each end of the single members being clamped between the double flanged members.

1,376,326. COMBINED HOT-WATER HEATING AND CONDENSING POWER SYSTEM. IRA N. EVANS, Detroit, Mich. Filed May 4, 1918. Serial No. 232,622. 1 Claim. (Cl. 237—12.1.)

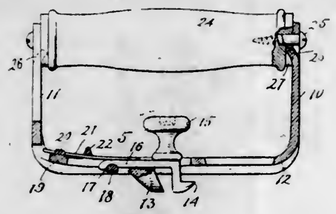


The combination of a power generator having an exhaust, a condenser, a connection between said condenser and the exhaust of said power generator, a condenser heater; connections establishing communication between said condenser heater, said condenser and the exhaust of said power generator; a hot water circulating and heating apparatus having a portion thereof in said condenser heater to simultaneously reduce the pressure of steam exhausting into the condenser heater and cause the water in said heating apparatus to be heated, and means in the connection between said condenser heater and said condenser to vary the exhaust of said condenser heater into said condenser.

1,376,327. FINE-MOTION DEVICE FOR SURVEYING AND OTHER INSTRUMENTS. ERNST G. FISCHER, Washington, D. C. Filed Dec. 18, 1919. Serial No. 345,710. 3 Claims. (Cl. 33—1.)

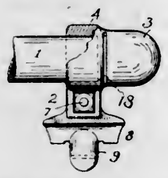
1. In an instrument of the character described, the combination with the vernier member, the graduated portion of the instrument coöperative therewith and the clamp block and means for securing the clamp block to the graduated portion of the instrument, of finger engageable pins carried respectively by the vernier member and by the clamp block whereby final adjustment of the vernier member may be effected.

1,376,328. SLIDING-SIDE CRIB. WILLIAM B. FOSTER, Utica, N. Y., assignor to Foster Brothers Manufacturing Company, Utica, N. Y., a Corporation. Filed Jan. 19, 1920. Serial No. 352,303. 1 Claim. (Cl. 5—58.)



In a sliding-side crib, the combination of a vertical guide rod, a hollow horizontal crib-side member having near its end oppositely disposed apertures through which the guide rod extends, an end closure for the hollow member having ears extending inward past said apertures with holes in said ears in line with said apertures and a bushing extending through said apertures and said holes whereby the end closure is held in place and the cavity of the hollow member is closed and a long guide-way is provided for the guide rod, said bushing entirely separating the guide rod from the hollow member and the ears of the end closure.

1,376,329. SADIRON-HOLDER. SAMUEL H. GIBSON, Cleveland, Ohio, assignor to The Fanner Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 18, 1918. Serial No. 223,023. 3 Claims. (Cl. 68—26.)

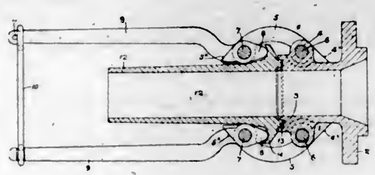


1. A holder for sad irons comprising a U-shaped frame having a hand engaging portion, the base of said frame having a cross member provided with a lug, a yoke

member formed upon the base portion of the frame, a flat spring having an opening which engages with the

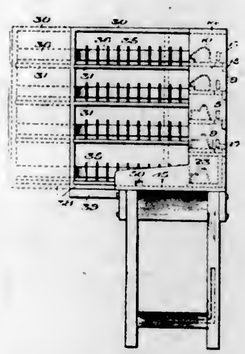
post or extension and beneath the yoke member, and a latch member carried by the base of the frame, the end of the flat spring engaging with the said latch.

1,376,330. COMBINED ROD AND ORNAMENT. SAMUEL H. GIBSON, Cleveland, Ohio, assignor to The Fanner Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 25, 1918. Serial No. 224,467. 2 Claims. (Cl. 126—333.)



1. An integral bracket and ornament structure comprising a band-like structure having portions adapted to be secured together, an ornament integrally secured to one edge of the band there being a slot separating a portion of the ornament from the band, adjacent that part of the band where the portions thereof are secured together, thereby rendering one of said portions slightly flexible.

1,376,331. CUE-TIP HOLDER. HENRY JOSEPH GRENIER, Bridgeport, Conn. Filed May 12, 1920. Serial No. 380,764. 2 Claims. (Cl. 46—9.)

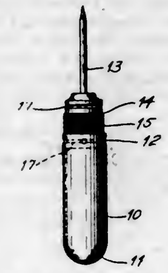


1. A combination with a cue and a sleeve secured to the end of a cue and having an angular longitudinal bore at its outer end, of a tip, an angular shank on the tip fitting the bore, said shank having an opening therein, said sleeve having an opening in its wall registering with the opening in the shank, a spring catch secured to the sleeve and located mainly along the exterior thereof, and having one end projecting into said registering openings securing the shank of the tip within the end of the sleeve.

1,376,332. COUPLING. GEOFFREY MERTON GULLICK, Highfield, near Wigan, England. Filed Dec. 16, 1919. Serial No. 345,252. 1 Claim. (Cl. 285—172.)

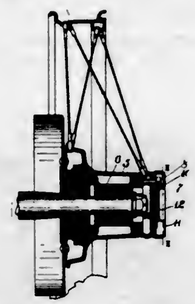
A pipe coupling having the members formed for an interfitting connection, one of said members having pivotally mounted diametrically opposed links, a lever pivotally supported in the free end of each link and having a short arm projected in one direction beyond its pivot and a laterally off-set long arm projected in the opposite direction beyond the pivot, and bearing tongues carried by the other member of the coupling to be engaged by the short arms of the levers in the coupling operation, the arm engaged surface of said tongues being rounded, the lever supported end of the links bearing directly upon the surface of one of the coupling members to provide fulcrums for the operation of the levers.

1,376,333. LETTER-CARRIER'S DESK. CLARENCE F. HEATH, Washington, D. C. Filed Apr. 21, 1917. Serial No. 163,634. 1 Claim. (Cl. 211—36.)



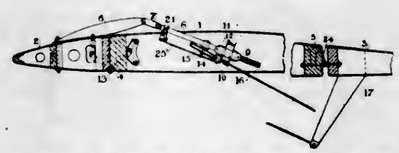
In a routing case, the combination with a plurality of shelves, of partitions therefor dividing the shelves into compartments, each partition comprising a wire bent into substantially U-shape, the ends being inserted into the upper side of the shelves, the front leg of the partition member being formed with an intermediate horizontally extending portion to serve as a guide for the mail matter, the lower ends of the wire preventing the mail matter from sliding into adjacent compartments, and the rear leg being inclined rearwardly to serve as a guide for the mail matter as it is being inserted.

1,376,334. FOOD PRODUCT. MARIE ANNA HEGINGER, New York, N. Y. Filed June 20, 1918. Serial No. 240,925. 3 Claims. (Cl. 99—11.)



1. That process for preparing potatoes to form an ingredient of a baked food product, which consists in first boiling the potatoes until they have begun to soften, and then in steaming the potatoes until they assume a comparatively dry and mealy condition.

1,376,335. CIGAR-PERFORATOR. PAUL J. HENTSCHEL, Baltimore, Md. Filed Aug. 5, 1920. Serial No. 401,352. 1 Claim. (Cl. 131—20.)



In a cigar perforator, the combination with a casing having a closed and an open end, of indentations near said open end, a head having cylindrical portions adapted to fit within said open end, a groove in each cylindrical portion for the reception of said indentations, a needle mounted in said head and a knurled portion on said head between said grooves.

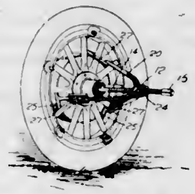
1,376,336. LOCKING MEANS FOR AUTOMOBILE-WHEELS. CHARLES O. HOWARD, Columbus, Ohio, assignor to The Phelps Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 3, 1919. Serial No. 328,242. 4 Claims. (Cl. 301—9.)

1. In a demountable wheel, the combination with an inner hub part and an outer hub part, of a plurality of bolts equally spaced from the axis of the united hub parts and securing them together, a positioning device for each of said bolts consisting of a spring, and a hub cap having means thereon for locking the springs.

1,376,337. AEROFOIL. MAURICE FRANCIS HUXLEY, Hendon, London, England. Filed Aug. 8, 1919. Serial No. 316,090. 3 Claims. (Cl. 244—12.)

1. An aerofoil having an initial section designed for the purpose of giving a high lift/drift ratio and provided with a hinged nose and a hinged rear flap, forming separate rigid elements, controlling means for moving said nose and flap upwardly and downwardly together, for the purpose of varying the angles of entry and trail simultaneously, and additional controlling means for further deflecting said rear flap upwardly and downwardly for the purpose of lateral control, substantially as hereinbefore set forth.

1,376,338. FRUIT GAGER AND GATHERER. CORNELIUS B. HYSOM, Santa Cruz, Calif. Filed Aug. 9, 1920. Serial No. 402,116. 9 Claims. (Cl. 56—340.)

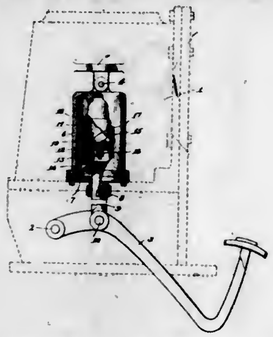


3. In a fruit gaging and gathering device, a wire loop member including a main passage and gaging loops of different sizes, said member also including a socket for securing a reach-pole thereto, said socket being formed by a helical extension of the piece of wire forming said main passage and gaging loops, and cutting means associated with said wire loop member.

1,376,339. BEARING METAL. JAMES G. KELLY, ALBERT L. PRINGLE, and HOLMES HALL, Sedalia, Mo. Filed May 7, 1920. Serial No. 379,642. 2 Claims. (Cl. 75—1.)

1. A bearing metal composed of tin, lead, zinc, and aluminum, substantially in the proportions of one part of aluminum, slightly more than one part of zinc, two parts of lead and four parts of tin.

1,376,340. WHEEL-PULLER. ABRAHAM B. KLAY, Beaverdam, Ohio. Filed May 19, 1920. Serial No. 382,547. 6 Claims. (Cl. 29—85.)

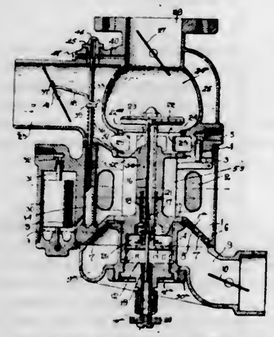


1. A device for removing wheels comprising T-shaped elements for engaging the spokes of the wheel, each of said elements having a plurality of link sections, pivoted levers each having a hook-shaped end adapted to engage one of said hook sections, means for locking said hook-shaped ends in engagement with said links and mechanism for exerting a tensile force on said levers.

1,376,341. CLUTCH-CONTROLLING MECHANISM. JULIUS G. KOPPEL, Akron, Ohio. Filed May 24, 1920. Serial No. 383,744. 2 Claims. (Cl. 188—97.)

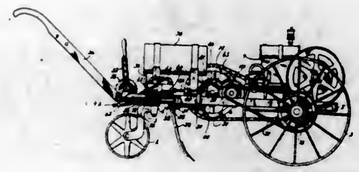
1. In a clutch controlling mechanism, the combination with the spring-pressed clutch, and its releasing lever, of a fluid containing casing, a cylinder within said casing provided with a constantly open small relief port and with an intake passage, a valve normally closing said intake passage, and a piston reciprocable in said cylinder and

connected to be operated by said releasing lever, said cylinder being provided with a supplemental relief port



adapted to be opened as said piston approaches its innermost limit of movement therein for quickly releasing said clutch.

1,376,342. RENEWABLE ELECTRIC FUSE. FRANK C. LA MAR and PETER J. HOPKINS, Pittsburgh, Pa. Filed Aug. 16, 1918, Serial No. 250,173. Renewed Mar. 10, 1921. Serial No. 451,330. 2 Claims. (Cl. 200—132.)

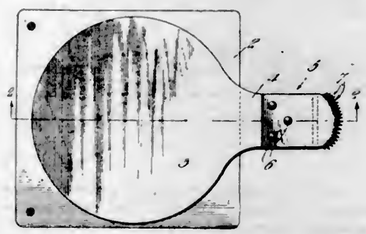


1. A renewable electric fuse, comprising a tubular casing of insulating material, having notches in one of its ends, a ferrule fitted upon the notched end thereof and provided with inwardly projecting ears passing through said notches, screws fixed in said ears and projecting beyond the end of the casing, a fuse element and terminals to which it is connected for supporting the fuse element in the casing, said terminals having cross-bars fixed therein, one of said cross-bars provided at its ends with openings adapted to engage the screws projecting from said ears, and end cap fitted upon the end of the casing over said ferrule and provided with openings for the passage of said screws, nuts screwed upon the projecting ends of said screws for locking the parts in place, and means for securing the cross-bar of the other terminal in the end of the casing at the opposite end of the fuse.

1,376,343. CARBURETER. ELDEN P. LAMB, Camden, Me., assignor of eleven-twentieths to John Bird, Camden, Me. Filed June 7, 1918. Serial No. 238,690. 11 Claims. (Cl. 261—18.)

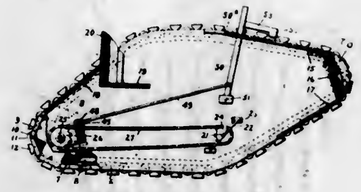
1. A carbureter having a fuel reservoir, a mixing chamber, an air inlet for the mixing chamber, a fuel port opening into the mixing chamber, a choke valve for controlling the quantity of air admitted to the mixing chamber, a fuel duct having one end adapted to be submerged in the fuel of the fuel reservoir, and a connection between the choke valve and said duct constructed and arranged to establish communication between the fuel in the fuel reservoir and the mixing chamber in response to movement of the choke valve toward closing position, and to cut off said communication in response to movement of the choke valve toward open position.

1,376,344. CULTIVATOR. EARLD H. LAMIELL, Greenwich, Ohio. Filed Oct. 6, 1919. Serial No. 328,711. 3 Claims. (Cl. 97—42.)



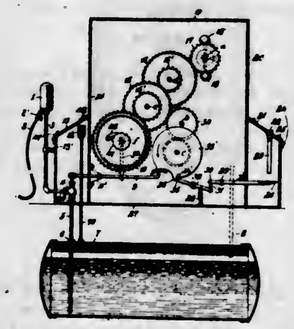
1. In combination with a wheeled frame of the character described, a cultivator pivotally mounted thereon, pivoted casters, and means between the cultivator and casters for holding the cultivator in proper alinement when the wheeled frame is turner toward either side.

1,376,345. DRY-DOCK. PETER S. LAWTON, New Orleans, La. Filed Feb. 7, 1919. Serial No. 275,594. 3 Claims. (Cl. 61—64.)



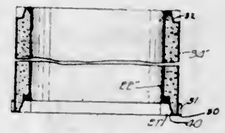
1. In a dry dock having a channel to receive ships by flotation, the combination with a repair platform extending from one side margin of the channel parallel thereto, of building platforms extending parallel to the channel from the remaining side margin of said channel and the inland side of the repair platform respectively.

1,376,346. CULINARY IMPLEMENT. FELIX M. LOCHER, Visalia, Calif. Filed Aug. 9, 1920. Serial No. 402,190. 2 Claims. (Cl. 146—15.)



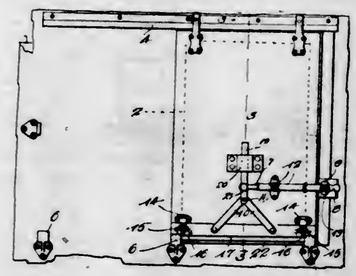
1. A cocoanut shredder comprising a support, and a substantially rectangular metal plate secured to the upper face thereof and extending beyond one end, the outer edge of this plate being curved transversely, bent upwardly, and serrated to provide a plurality of cutting teeth.

1,376,347. TOY TANK. HENRY G. MCCOMB, New York, N. Y. Filed Aug. 21, 1919. Serial No. 318,898. 14 Claims. (Cl. 208—42.)



1. In an apparatus of the character described, the combination of a body of the general contour of a tank or "caterpillar" tractor, as used in warfare or agriculture, a seat therein, endless tread chains on said body having parts adapted to engage the surface over which the device is propelled, shaft means adapted to be driven by an operator on said seat, and clutch means under the control of the operator for connecting said shaft means to either one or both said tread chains whereby the apparatus may be steered by clutching and unclutching the tread chains.

1,376,348. LIQUID-DISPENSING APPARATUS. EMIL B. MILLER, Schulenburg, Tex. Filed Oct. 7, 1919. Serial No. 329,143. 1 Claim. (Cl. 221—99.)

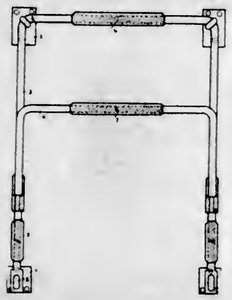


In a coin actuating apparatus, the combination of a liquid reservoir, a conduit extending into the reservoir, a valve arranged in the upper end of the conduit, a conduit extending at right-angles from the valve and then upward, an auxiliary reservoir secured to the upper end of the last-named conduit, a casing arranged around the valve, a stem secured to the valve head, a lever secured to the stem and entering the casing and having a bent end opposite the end secured to the stem, a spring actuated disk having a notch that normally receives the bent end to preclude downward movement of the lever that is secured to the stem; a second notch provided in the disk, a short arm fulcrumed in the casing and having a bent end that normally rests in the last named notch and a comparatively long arm secured to the short arm whereby on downward movement of the long arm the notch of the short arm will be displaced from the notch of the disk to permit rotary motion of said disk.

1,376,349. MEANS FOR FORMING CONCRETE-PIPE SECTIONS. JOSEPH E. MOODY, Chicago, Ill. Filed July 21, 1919. Serial No. 312,363. 9 Claims. (Cl. 25—126.)

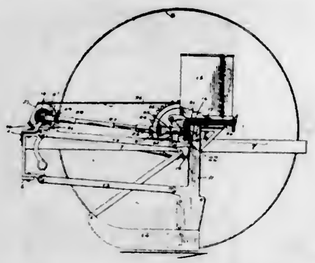
8. Means for forming concrete pipe sections comprising a form having rings formed of different diameters, some of said rings comprising sections removable transversely of said form.

1,376,350. CAR-DOOR FASTENING AND RELEASING DEVICE. MARTIN J. NEUMANN and JOSEPH C. MATHER, Oshkosh, Wis. Filed June 1, 1920. Serial No. 385,804. 2 Claims. (Cl. 20—22.)



2. The combination with a body having a doorway and a door slidably mounted and having swinging movement toward and away from the body, of a door guide carried by the body beneath the door and having an upstanding head extension positioned in spaced relation to the outer face of the door when the door is in a vertical position, a securing bar extending longitudinally of the lower end portion of the door and slidably mounted for vertical sliding movement, the bar having its lower edge portion beveled from its outer face to provide a cam face for engaging the upstanding head of the door guide and forcing the door into tight engagement with the body, an actuating lever pivotally mounted on said door and comprising a hasp, a keeper on said body to which said hasp is adapted to be releasably secured, and operative connections between said lever and said bar comprising a pair of links secured to the respective ends of said bar whereby on operation of said lever vertical sliding movement is imparted to said bar.

1,376,351. FASTENING DEVICE FOR AWNINGS. OSKAR ÖSTRÖM, Herserud, Lidingö, Sweden. Filed Aug. 5, 1920. Serial No. 401,512. 2 Claims. (Cl. 156—43.)

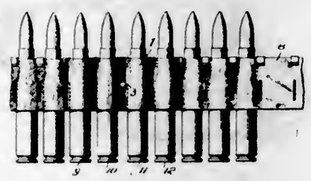


2. An awning fastener comprising an inverted U-shaped clamp the arms of which are extensible and provided with adjusting means and also provided with slots near their lower ends, downturned attaching hooks engaged in said slots, upturned attaching hooks engaged in the angles between the intermediate portion and the arms of said clamp,

and a second inverted U-shaped clamp having its arms pivotally connected at their lower ends to the arms of said

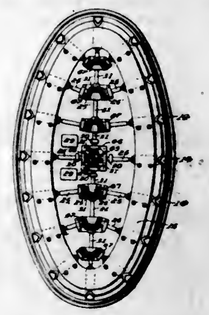
first named clamp, each of said clamps being longitudinally extensible and having adjusting means.

1,376,352. SEED-DISPENSER-DRIVING MECHANISM FOR CORN-PLANTERS. ERNEST W. PAULSON, Sioux City, Iowa, assignor to Perfection Corn Planter Manufacturing Company, Sioux City, Iowa, a Corporation of South Dakota. Filed Jan. 20, 1919. Serial No. 272,199. 2 Claims. (Cl. 111—37.)



1. In a corn planter a main frame, a plurality of planting mechanisms supported thereby to oscillate vertically with respect to each other and the main frame, and each including an upright seed chute, a seed dispenser thereabove having an opening communicating with the chute, a bevel gear rotatable between the dispenser and chute, and having openings positioned to pass in registration with said first opening, to control the seeds admitted to the chute, bearings on the chutes, spindles rotatable therein, bevel gears on the rear ends of the spindles intermeshed with said first bevel gears, a transverse rotatably mounted shaft on the main frame, yokes having their arms pivoted on said shaft, longitudinally disposed extensible shafts having their front end portions journaled in the shanks of the yokes, bevel gears on said shaft, bevel gears on the said extensible shafts driven by said latter bevel gears, universal joints between said extensible shafts and spindles, and means for rotating said transverse shaft.

1,376,353. PROCESS OF MAKING PAPER, FIBER-BOARD, AND SIMILAR MATERIALS. JAMES C. PEABODY, Boston, Mass. Filed Oct. 23, 1918. Serial No. 259,413. 11 Claims. (Cl. 92—21.)

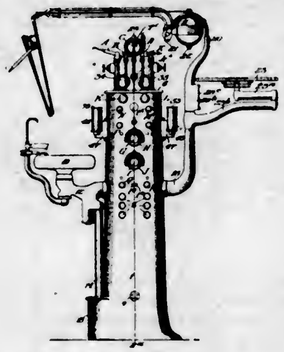


1. The process of making paper which cousists in introducing an added material to a mass of fibers suspended in water in a preliminary container to form a stock of a predetermined standard of concentration with reference to the added material, and forming the paper by means of a machine in which the fiber stock is further diluted but is maintained at substantially the same standard of concentration of added material.

1,376,354. CARTRIDGE-BELT CLAMP. JOHN S. PEOPLES, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Nov. 16, 1918. Serial No. 262,891. 10 Claims. (Cl. 89—35.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

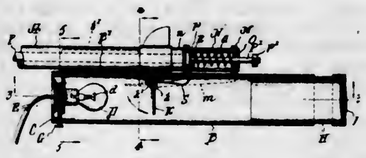
1. A cartridge clamp adapted to secure the last cartridge in one cartridge belt and the first cartridge of another belt, said clamp comprising strips being bent to form substantially circular openings, and the ends of said strips being spaced with relation to each other to accommodate portions of said belts.

1,376,355. VAULT AND SAFE DOOR. EDWARD H. PHIPPS, Philadelphia, Pa. Filed May 15, 1918. Serial No. 234,786. 8 Claims. (Cl. 109—3.)



1. In a safe, vault and the like, provided with a door, the combination of a locking means comprising a locking bolt mounted on said door, a bolt socket member in which said bolt is adapted to move, a locking ring provided with a beveled surface mounted on said safe or vault adjacent said bolt socket member, and across which the end of said bolt moves, said bolt provided at its end with a beveled surface corresponding to and adapted to contact with the beveled surface on said locking ring, said bolt socket member provided with a beveled surface, said bolt also provided with a second beveled surface adapted to contact the beveled surface on said bolt socket member whereby the bolt in its movement to locking position may be wedged into locking position in said socket and against said locking ring.

1,376,356. UNITARY DENTAL APPARATUS. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed Sept. 5, 1917. Serial No. 189,825. 15 Claims. (Cl. 32—5).



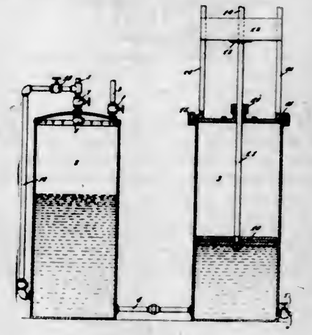
1. An assembled dental apparatus, comprising a hollow column, a plurality of mouth instruments located above the column each having an electric device, separate cord circuits for said devices looped within the column and

having means for yieldingly retracting them, a voltage control device mounted within the column having circuit

connections with said cords, and operating means for said voltage control device extending exteriorly of the column below the mouth instruments.

1,376,357. APPARATUS FOR TRAINING TROOPS IN THE POINTING OF GUNS. OLNEY PLACE, U. S. Army. Filed Oct. 9, 1919. Serial No. 329,554. 14 Claims. (Cl. 124—15.5.)

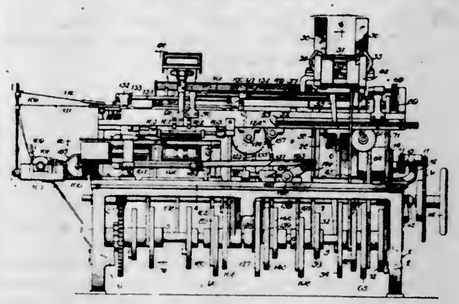
1. Apparatus for use in training in the pointing of guns, comprising a tube, and means for connecting the same to the gun, an electric lamp mounted in said tube near one end thereof, a lens mounted near the opposite end of said tube, a shutter normally interposed between said lamp and said lens, and means for quickly moving said shutter incident to the normal action of operating the firing mechanism of the piece.



1,376,358. HAIR-TREATING DEVICE. ZIVA POPIN, New York, N. Y. Filed May 17, 1919. Serial No. 297,767. 3 Claims. (Cl. 132—36.)

1. A new article of manufacture, comprising a strip of fabric of oblong form having superimposed thereon other similarly formed strips of fabric which are sewed thereto, said second strips of fabric terminating short of the ends of the first named strips of fabric, said strips being impregnated with a hair treating substance.

1,376,359. APPARATUS FOR STORAGE OF COMPRESSED AIR. PATRICK HENRY QUIGLEY, Winnett, Mont. Filed Mar. 29, 1919. Serial No. 286,207. 1 Claim. (Cl. 230—25.)

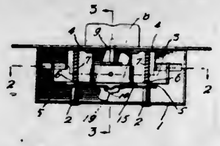


In apparatus of the class described the combination with a tank and guides, of a weight container slidable on the guides, a rod extending downwardly therefrom and into the tank, a piston connected to the rod, a valved water outlet extending from the lower portion of the tank, a second tank, means for maintaining communication between the lower portions of the two tanks, means for

directing air under pressure into the upper portion of the second tank thereby to expel water from said second tank and into the lower portion of the first tank to elevate the piston and the weight holding container, and means for directing air into the second tank and upwardly through the liquid contents thereof thereby to cool said contents.

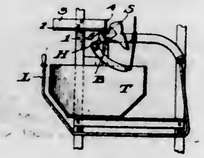
1,376,360. [WITHDRAWN.]

1,376,361. BOX-MAKING MACHINE. HERBERT J. SAUVAGE, Chicago, Ill., assignor to A. D. Shoup Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 6, 1920. Serial No. 401,732. 40 Claims. (Cl. 93—43.)



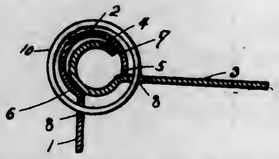
1. In a machine of the character described, the combination of an arbor adapted to be advanced into successive positions, means for applying a folded blank to said arbor in one position thereof, means for feeding a sheet of covering paper into the path of said arbor, and means for applying said sheet to said blank in the movement of said arbor from one to another of said positions.

1,376,362. BAG-LOCK. CLARENCE E. SMITH, Naugatuck, Conn., assignor to Worcester Metal Goods Company, Waterbury, Conn., a Corporation of Massachusetts. Filed Feb. 24, 1921. Serial No. 447,471. 5 Claims. (Cl. 70—2.)



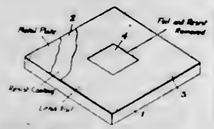
4. In a bag lock, the combination of a casing, two parallel guide-posts therein having shoulders, a bolt having two upper and two lower sliding engagements with said posts guiding said bolt thereon, lower engagements extending below said shoulders, springs surrounding said

posts between said shoulders and said upper engagements, a key-actuated dog pivoted to said bolt between the planes of said upper and lower engagements and provided with a



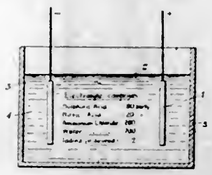
downward extension, said casing having an abutment which is in line with said extension when said dog is in one position and is out of alinement therewith when said dog is in its other position, and a detent for said dog.

1,376,363. LOADING DEVICE FOR SHOE-DIPPING MACHINES. JOHN HENRY WALL, Bristol, R. I. Filed Feb. 10, 1920. Serial No. 357,627. 8 Claims. (Cl. 91—46.)



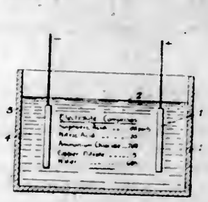
1. In combination with a shoe dipping mechanism including a head having an upwardly facing slot and horizontal tracks above the head having vertical side flanges and having vertical rear end parts bent inwardly from the side flanges to form end stops, the stops being spaced from the rear ends of the tracks to form outlets, which latter are in register with the slot of the head.

1,376,364. STOVEPIPE-JOINT. JAMES WATSON, Marinette, Wis. Filed Feb. 20, 1920. Serial No. 360,266. 3 Claims. (Cl. 126—275.)



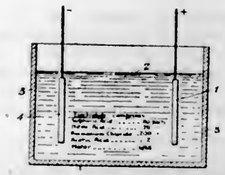
3. A joint comprising first and second members provided with trough-shaped beads, the bead of one member being hingedly received within the bead of the other member, the said members having openings; and an annular securing device surrounding the beads and received in the openings, the securing device constituting means for limiting relative longitudinal movement between the beads.

1,376,365. PROCESS OF PREPARING STENCIL-PLATES, DIE-PLATES, AND THE LIKE. GOTTHOLD E. WERTHEIMER, New York, N. Y. Filed Dec. 24, 1917. Serial No. 208,558. 22 Claims. (Cl. 204—1.)



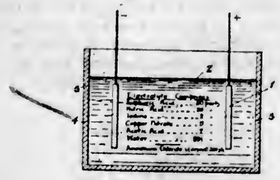
1. A process of the character described, which consists in coating a metallic anode with a coating of lead foil, removing a portion or portions of said coating of predetermined extent and configuration to expose the metal of the anode therethrough, immersing the anode in an electrolytic solution together with a cathode, and removing metal from said exposed portion or portions by causing electric current flow from the anode through said exposed portion or portions and through the solution to the cathode.

1,376,366. SOLUTION OR BATH FOR USE IN ELECTRICALLY PREPARING STENCIL-PLATES, DIE-PLATES, AND THE LIKE. GOTTHOLD E. WERTHEIMER, New York, N. Y. Filed Dec. 24, 1917. Serial No. 208,559. 7 Claims. (Cl. 204—1.)



1. A solution for use in the electrolytic treatment of metallic plates or blocks, prepared by mixing together sulfuric acid, nitric acid, ammonium chlorid and water.

1,376,367. SOLUTION OR BATH FOR USE IN ELECTRICALLY PREPARING STENCIL-PLATES, DIE-PLATES, AND THE LIKE. GOTTHOLD E. WERTHEIMER, Astoria, N. Y. Filed May 16, 1918. Serial No. 235,012. 2 Claims. (Cl. 204—1.)

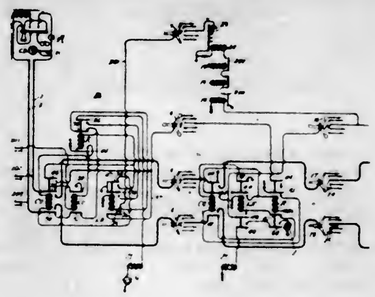


1. A solution for use in the electrolytic treatment of metallic plates or blocks, prepared by mixing together sulfuric acid, nitric acid, ammonium chlorid and water, with a small proportion of copper nitrate.

1,376,368. SOLUTION OR BATH FOR USE IN ELECTRICALLY PREPARING STENCIL-PLATES, DIE-PLATES, AND THE LIKE. GOTTHOLD E. WERTHEIMER, Astoria, N. Y. Filed May 16, 1918. Serial No. 235,013. 2 Claims. (Cl. 204—1.)

1. A solution for use in the electrolytic treatment of metallic plates or blocks, prepared by mixing together sulfuric acid, nitric acid, ammonium chlorid and water, with a small proportion of acetic acid.

1,376,369. SOLUTION OR BATH FOR USE IN ELECTRICALLY PREPARING STENCIL-PLATES, DIE-PLATES, AND THE LIKE. GOTTHOLD E. WERTHEIMER, Astoria, N. Y. Filed May 16, 1918. Serial No. 235,014. 5 Claims. (Cl. 204—1.)

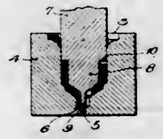


1. A solution for use in the electrolytic treatment of metallic plates or blocks, prepared by mixing together sulfuric acid, nitric acid and water, and small proportions of iodin, copper nitrate and acetic acid.

1,376,370. CARRIER. ARTHUR L. WILLIAMS, Waterbury, Conn., assignor to The Waterbury Brass Goods Corporation, Waterbury, Conn., a Corporation of Connecticut. Filed May 7, 1920. Serial No. 379,435. 4 Claims. (Cl. 113—113.)

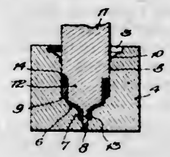
1. In a carrier for machines of the character referred to, a reciprocating frame, pairs of rigid fingers pivoted thereto having co-acting faces, springs for actuating said fingers, and means for adjusting the faces of said fingers longitudinally relatively to said frame and securing them rigidly in place against longitudinal movement when so adjusted.

1,376,371. AUTOMATIC TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1916. Serial No. 123,267. 40 Claims. (Cl. 179—18.)



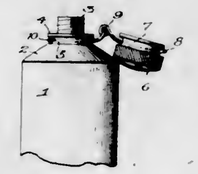
1. A telephone system including groups of primary switches, secondary switches accessible to said primary switches and divided into groups, said primary and secondary switches being provided with contact makers adapted to remain in their antecedent progressive positions, a group of first selector switches for each group of secondary switches, and means for preventing any primary switch from connecting to an idle secondary switch in a group where all the first selector switches are busy.

1,376,372. SOFT-COLLAR HOLDER. EARLE N. FONTNEAU, Attleboro, Mass. Filed Aug. 12, 1920. Serial No. 403,166. 4 Claims. (Cl. 24—73.)



1. A soft collar holder composed of a pair of relatively wide strips having their inner ends interconnected and slidable for adjustment and having their outer ends twisted and inclined to form wide button shanks, and button heads soldered to the outer free end edges of the strips.

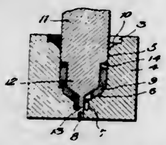
1,376,373. ART OF EXTRUDING COLLAPSIBLE TUBES. WILLIAM C. HUNTOON, Providence, R. I. Filed June 10, 1919. Serial No. 303,180. 4 Claims. (Cl. 207—10.)



1. The art of extruding collapsible tubes, consisting in placing a centrally apertured disk in a die, inserting a plunger to draw the blank down into the die to thereby form an inverted blank comprising a cylindrical side wall and a top wall, and then exerting pressure on the top wall to force the same into the central aperture in a substantially radial direction and then axially to extrude a neck therefrom by thinning out the top wall and leaving the side wall of original thickness.

1,376,374. ART OF DRAWING COLLAPSIBLE TUBES. WILLIAM C. HUNTOON, Providence, R. I. Filed July 24, 1919. Serial No. 313,024. 4 Claims. (Cl. 207—10.)

1. The art of drawing formed blanks from the flat material consisting in extruding the completed top and discharge nozzle in their finished state from the central portion of the material by forcing said central portion first radially inwardly and then axially, and turning the remainder of the flat blank up in the form of a cylinder from which the sides of the flexible tube may subsequently be extruded.



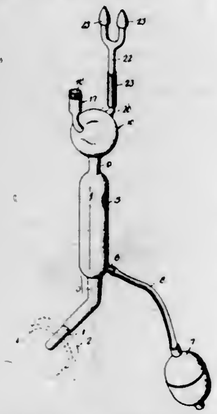
1,376,375. COLLAPSIBLE TUBE. WILLIAM C. HUNTOON, Providence, R. I. Filed July 24, 1919. Serial No. 313,025. 1 Claim. (Cl. 221—60.)

In a collapsible tube having a threaded neck, a relatively thin metal ring integral with the neck and extending outwardly from the threads and spaced above the

upper end closing wall of the tube and forming a groove with said end closing wall, a cap threaded over the neck, a bail encircling the cap, and a bail hingedly connected to the first named bail and received in said groove, the upper face of the ring forming a seat for the rotatable cap so as to seal the tube neck against the ingress of air.

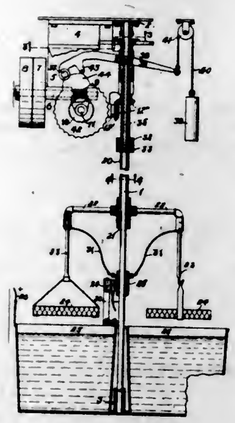
1,376,376. ART OF EXTRUDING COLLAPSIBLE TUBES. WILLIAM C. HUNTOON, Providence, R. I. Filed May 8, 1920. Serial No. 379,758. 4 Claims. (Cl. 207—10.)

1. The art of extruding collapsible tubes from flat stock, consisting in first forming the top, screw threading the nozzle of the top, attaching the cap to the nozzle, and finally extruding the collapsible body of the tube.



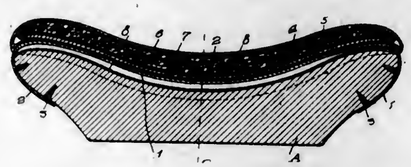
1,376,377. AUTOMOBILE-MIRROR. CHARLES MEE, Rochester, N. Y., assignor of three-tenths to Frank Kelper, Rochester, N. Y. Filed Dec. 8, 1920. Serial No. 429,263. 19 Claims. (Cl. 45—97.)

2. A mirror having two sections hinged together end to end, trunnion bearings for the outer ends of said sections, means for rocking said mirrors on said trunnion bearings.



17. In a mirror, a hinge having a swinging plate and a fixed plate, a screw connected by its threads to the swinging plate, said screw having a head engaged below the stationary plate by which it is held against longitudinal movement, a mirror attached to the swinging plate and swinging therewith.

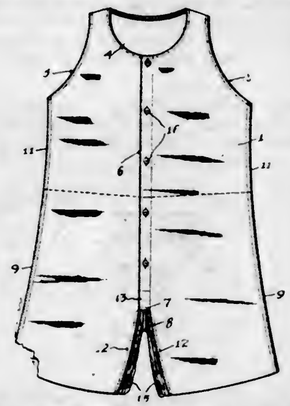
1,376,378. ELECTROMEDICAL APPARATUS. WILLIAM H. MEYENBERG, Lemont, Ill., assignor to J. J. Bleadon, Chicago, Ill. Filed Oct. 29, 1920. Serial No. 420,379. 12 Claims. (Cl. 128—190.)



1. In an electro-medical apparatus, the combination of a vacuum tube, a shell surrounding said tube and forming an air space, a vessel communicating with said air space and adapted to contain a quantity of liquid, and a valve intermediate said vessel and air space for preventing the flow of liquid into said space from said vessel.

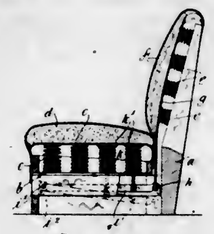
1,376,379. SILVERWARE CLEANING AND WASHING MACHINE. GEORGE H. NORTH, Cranston, R. I., assignor to Gorham Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed May 17, 1920. Serial No. 381,839. 16 Claims. (Cl. 204—7.)

1. In a machine for cleaning silverware, a vertically movable support having a ware-carrying arm on its lower end, a lever having a fixed fulcrum and rotatably connected to the support for raising and lowering the latter, means acting upon the lever to raise and lower the support, and means for intermittently rotating the support.



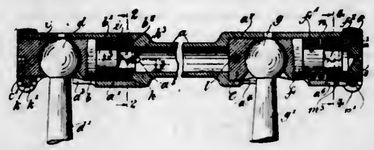
1,376,380. ARMREST. BENJAMIN FRANKLIN PEASE, Cincinnati, Ohio, assignor to The Ohio Truss Co., Cincinnati, Ohio. Filed May 8, 1920. Serial No. 379,913. 4 Claims. (Cl. 135—52.)

4. The combination with a crutch top, of an arm rest secured thereon and including a resilient strip mounted for limited spreading movement, a pad on said strip, a flexible covering extending over the pad and having its edges inturned between said strip and the crutch top, and means for fastening said edges together to hold them normally spaced from the resilient strip, said edges being supported by the crutch top.



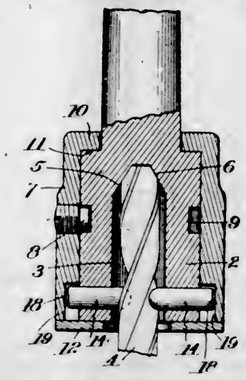
1,376,381. UNDERGARMENT. CHARLES R. WATSON, New York, N. Y.; Sallie Abell Watson executrix of said Charles R. Watson, deceased. Filed Feb. 7, 1920. Serial No. 356,825. 5 Claims. (Cl. 2—144.)

1. A combination garment formed of woven fabric throughout its entire front and approximately half of its back, and having approximately the lower half of its back formed of knitted material, said garment being narrow at the top and very wide at the bottom and increasing in width gradually from top to bottom, and having neck,



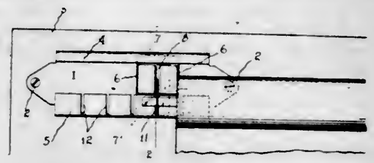
arm and leg openings and only one opening in the body thereof beginning at the crotch and terminating at the neck opening in the front.

1,376,382. CUSHIONED SEAT. MERRILL C. HORINE, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1920. Serial No. 433,134. 4 Claims. (Cl. 155—53.)



1. A seat comprising a bottom cushion, a back cushion independent thereof and pivoted arms mounted under the bottom cushion and engaged operatively thereby, and means to connect said arms with the back cushion to impress the movements of the bottom cushion on the back cushion.

1,376,383. DRAG-LINK. CASCIOUS H. DE LA MONTE, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 10, 1919. Serial No. 322,933. 5 Claims. (Cl. 287—90.)

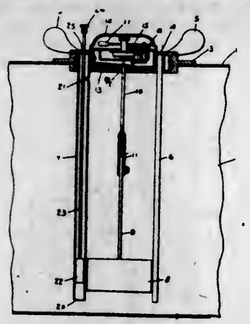


1. In combination with a drag link and arm operatively engaged therewith, a sleeve at one end of the drag link into which the arm extends, a block of less diameter than the sleeve slidably mounted in the sleeve and engaging the arm, a guide plate independent of the sleeve and block and mounted in the sleeve, means to engage the block with the plate to hold the two against relative rotation while permitting relative sliding movement, and means to hold the plate against rotation in the sleeve.

1,376,384. DRILL-CHUCK. MARSELIUS J. LOGAN, Springfield, Va., assignor, by direct and mesne assignments, to Wayne Tool Manufacturing Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1920. Serial No. 358,787. 1 Claim. (Cl. 279—71.)

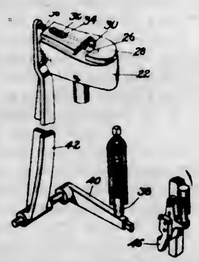
A chuck for broken drills, having a shank provided with an enlarged cylindrical head forming an annular shoulder at its juncture with the shank, there being an axial socket in said head to receive a drill, said socket having its inner end tapered to center a broken drill therein, a rotary collar fitted around said cylindrical head to bear thereon, a flange on said collar to engage said annular shoulder of the head to prevent outward axial movement of the collar on said head, clamping members mounted to slide radially in the head and adapted to engage in the flutes of a broken drill, said collar also having cam ways for actuating the clamping members, said cam ways opening on the outer end of the collar, a plate secured to said outer end of the collar and overlapping the outer end of the head for preventing inward axial movement of the collar on said head, there being a bore reaching from the outer end of each clamping member obliquely therethrough and into the head, springs in said bores for automatically retracting the clamping members when the latter are released from the pressure of the cam ways, and adjustable plugs in the outer ends of said bores for tensioning said springs.

1,376,385. COMBINED WINDOW SHADE AND CURTAIN FIXTURE. WILLIAM C. J. MILLER, Philadelphia, Pa. Filed Dec. 23, 1919. Serial No. 346,890. Renewed Dec. 22, 1920. Serial No. 432,598. 5 Claims. (Cl. 156—24.)



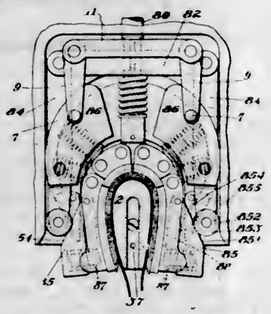
5. A window fixture comprising a strip of rigid material for attachment to a window casing, said strip provided with upper and lower channels, a socket member adjustable within said channels, a shade roller hanger and a curtain pole bracket removably carried by said socket member and means in one of said channels to co-act with said hanger in locking the socket member in an adjusted position.

1,376,386. GAS-TANK ALARM. WALTER E. BEYER, Indianapolis, Ind. Filed Dec. 15, 1919. Serial No. 344,876. 4 Claims. (Cl. 116—111.)



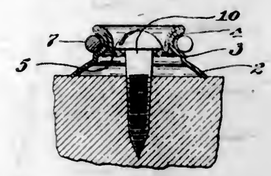
2. An alarm comprising a cap, a float for controlling the operation of the alarm, guides on said cap for guid-

ing said float, one of said guides being hollow, a float therein, a stem carried thereby, the upper end of said



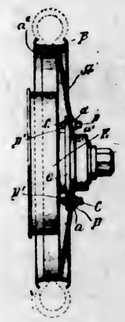
stem having a threaded portion adapted to be screwed into said cap.

1,376,387. METHOD OF MAKING SHOES. MATTHIAS BROCK, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 6, 1918. Serial No. 232,917. 8 Claims. (Cl. 12—142.)



3. That improvement in methods of preparing shoes to be sewed around the end which consists in positioning the end portion of upper materials around a shoe form, and molding the margin of said materials between and in contact with rigid molding instrumentalities to produce a flange upstanding at a definite angle with relation to the tread face of the form around the end of the form and located a predetermined distance inwardly from the edge of said tread face.

1,376,388. SHAPING-MACHINE FOR SHOES. MATTHIAS BROCK, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 21, 1918. Serial No. 235,814. 43 Claims. (Cl. 12—97.)

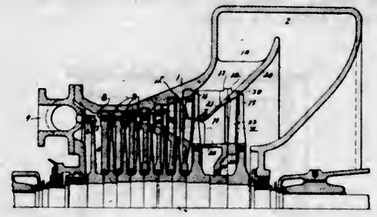


41. In a machine of the class described, the combination with a shoe end embracing band, of wedge members yieldingly connected respectively to the opposite sides of said band, operating means movable lengthwise of the shoe in wedging engagement with said members for closing the band on the shoe, and additional means connected to the band and arranged to be operated by the reverse movement of said operating means to open the band.

1,376,389. SNAP-FASTENER. GEORGE A. HOLMES, Newton Center, Mass., assignor to Fred Joy, Winchester, Mass. Filed May 7, 1920. Serial No. 379,443. 2 Claims. (Cl. 24—215.)

1. A snap fastener consisting of a socket member and a stud member composed of a main portion having a base flange and a hollow shank provided with an annular spring recess surrounding the same and an inwardly projecting attaching flange within the hollow shank, combined with a split ring spring in said spring recess, having its outer circumference normally projecting beyond the circumference of said shank substantially as described.

1,376,390. DEMOUNTABLE WHEEL. ANDRÉ JULES MICHELIN, Paris, France, assignor to Michelin & Cie., Clermont-Ferrand, France, a Corporation of France. Filed May 21, 1919. Serial No. 298,644. Renewed June 3, 1920. Serial No. 386,325. 6 Claims. (Cl. 301—63.)



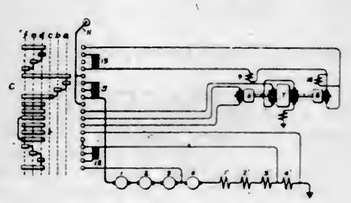
1. In a wheel, the combination with a hub provided with a flange thereon, of an annular dished web plate provided at its inner periphery with a hollow annular rib adapted to register with said flange, the outer wall of said rib being provided with concave sockets, screw-threaded fastening bolts passing through said flange and said sockets, and nuts having convex bosses fitting in said sockets and engaging the screw threads on said bolts, substantially as described.

REISSUES.

15,092. STEAM-TURBINE. KARL BAUMANN, Urmston, England, assignor to Metropolitan-Vickers Electrical Company, Limited, a Company organized under the laws of Great Britain. Filed Jan. 20, 1921. Serial No. 438,743. Original No. 1,302,282, dated Apr. 29, 1919, Serial No. 105,409, filed June 23, 1916. 48 Claims. (Cl. 253—69.)

1. In a turbine, the combination of a plurality of successively arranged stages having the motive fluid passing

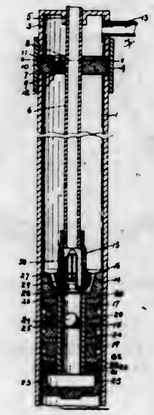
therethrough in approximately the same direction including rows of moving blades and means to increase the lead-



ing blade area including means to discharge steam from a plurality of said rows of moving blades directly to the exhaust.

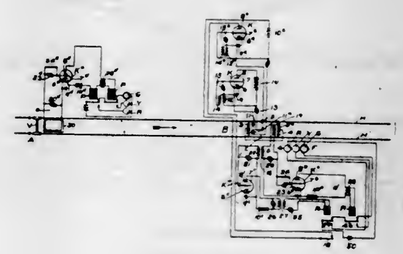
15,093. ANGULAR-SOCKET WRENCH. GEORGE R. FULLENWIDER, Fairfield, Mont. Filed Dec. 20, 1919. Serial No. 346,378. Original No. 1,310,473, dated July 22, 1919. Serial No. 253,430, filed Sept. 10, 1918. 22 Claims. (Cl. 81—177)

13. The combination with a wrench including a rotatable member, of a socket member having a polygonal socket and an internal peripheral groove, a resilient clamping ring retained by said groove, and an implement having a complementary polygonal portion and a grooved extension to coact respectively with said socket member and clamping ring.



15,094. REGENERATIVE BRAKING. GEORGE H. HILL, deceased, Schenectady, N. Y., by General Electric Company, a Corporation of New York, assignee. Filed Dec. 15, 1919. Serial No. 345,031. Original No. 1,281,959, dated Oct. 15, 1918, Serial No. 120,667, filed Sept. 18, 1916. 32 Claims. (Cl. 172—179.)

3. In a system of regenerative control, the combination of a plurality of similar dynamo electric machines, one of said machines being connected to excite another so as to cause the other to deliver energy to a supply circuit, and a resistor traversed by the current delivered to the circuit for varying the value of the energy thus delivered.

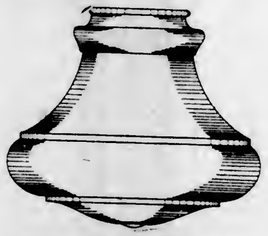


15,095. PUMP. GRANVILLE ALLISON HUMASON, Houston, Tex., assignor of one-half to William E. Langley, Houston, Tex. Filed Aug. 7, 1920. Serial No. 402,015. Original No. 1,325,565, dated Dec. 23, 1919, Serial No. 330,060, filed Oct. 11, 1919. 10 Claims. (Cl. 103—79.)

1. In a pump, a working barrel, a piston reciprocable therein, a hollow sucker rod on said piston, a valve controlled diaphragm above said piston, said piston having means to draw a flushing fluid downwardly from the sur-

face and discharge it upwardly through said sucker rod by the operation of said piston.

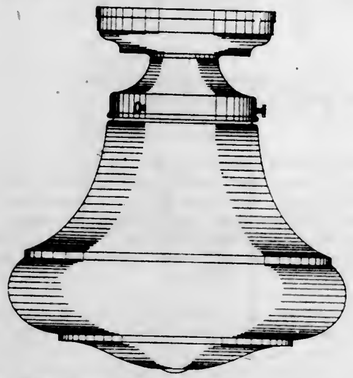
15,096. RAILWAY SIGNALING. LLOYD V. LEWIS, Edgewood borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 26, 1921. Serial No. 448,224. Original No. 1,365,329, dated Jan. 11, 1921, Serial No. 121,378, filed Sept. 21, 1916. 24 Claims. (Cl. 246—37.)



21. In combination, a section of railway track provided with a track circuit, a signal for said section, and an electron tube controlled by said track circuit for governing said signal and comprising a heated filament, a grid and a plate.

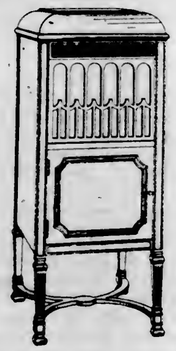
15,097. NON-SLIPPING PAVING COMPOSITION. PATRICK F. SOLAN and HERBERT STANTON BALLIET, New York, N. Y. Filed Aug. 26, 1918. Serial No. 251,577. Original No. 1,193,938, dated Aug. 8, 1916, Serial No. 14,759, filed Mar. 16, 1915. 4 Claims. (Cl. 106—25.)

1. A new composition of matter composed of hard, sharp grit, sand, cement, an abrasive and a liquid, well mixed together in substantially the proportions set forth, and allowed to set.



DESIGNS.

57,562. LIGHTING-FIXTURE URN. HARRY C. ADAM, St. Louis, Mo. Filed Sept. 13, 1920. Serial No. 410,015. Term of patent 14 years.

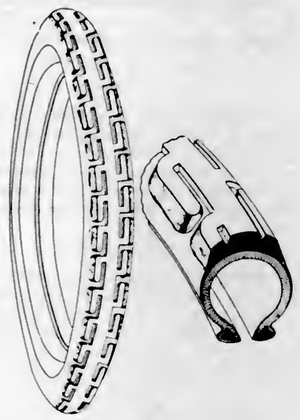


The ornamental design for a lighting-fixture urn, as shown.

57,563. LIGHTING-FIXTURE. HARRY C. ADAM, St. Louis, Mo. Filed Sept. 20, 1920. Serial No. 411,676. Term of patent 14 years.

The ornamental design for a lighting fixture, as shown.

57,564. PHONOGRAPH-CABINET. RAIMONDO C. AIMONE, New Rochelle, N. Y., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Dec. 18, 1920. Serial No. 431,781. Term of patent 14 years.

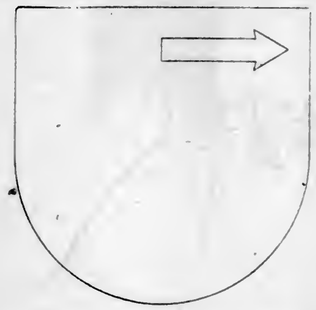


The ornamental design for a phonograph cabinet as shown.

57,565. PHONOGRAPH-CABINET. RAIMONDO C. AIMONE, New Rochelle, N. Y., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Dec. 18, 1920. Serial No. 431,782. Term of patent 14 years.

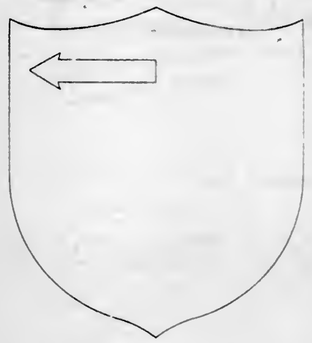
The ornamental design for a phonograph cabinet as shown.

57,566. ELASTIC VEHICLE-TIRE. JOHN M. ALDERFER, Akron, Ohio. Filed Sept. 18, 1919. Serial No. 324,704. Term of patent 14 years.



The ornamental design for an elastic vehicle tire as shown.

57,567. VACUUM-INSULATED JUG AND CASING THEREFOR. GEORGE P. ALTENBERG, Cincinnati, Ohio, assignor to The Icy-Hot Bottle Company, Cincinnati, Ohio, a Corporation of West Virginia. Filed Sept. 8, 1919. Serial No. 322,587. Term of patent 14 years.

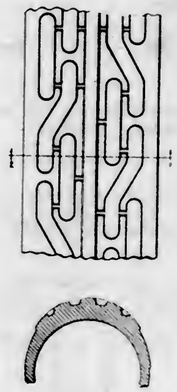


The ornamental design for a vacuum insulated jug and casing therefor, substantially as shown.

57,568. ROAD-MARKER. THOMAS C. ANGERSTEIN, Chicago, Ill. Filed Aug. 19, 1920. Serial No. 404,688. Term of patent 14 years.

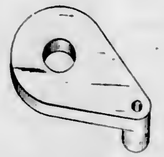
The ornamental design for a road marker, as shown.

57,569. ROAD-GUIDE. THOMAS C. ANGERSTEIN, Chicago, Ill. Filed Aug. 19, 1920. Serial No. 404,689. Term of patent 7 years.



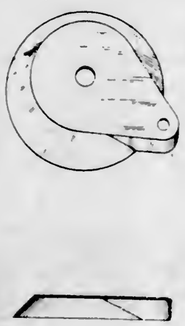
The ornamental design for a road guide, as shown.

57,570. GLASS GOBLET OR SIMILAR ARTICLE OF MANUFACTURE. JOSEPH O. BALDA, Newark, Ohio, assignor to Central Glass Works, Wheeling, W. Va., a Corporation of West Virginia. Filed Sept. 30, 1920. Serial No. 413,929. Term of patent 14 years.



The ornamental design for a glass goblet or other similar article of manufacture, as shown.

57,571. TIRE. ARTHUR BALTHAZAR, Chicopee Falls, and MYRON R. SHAW, Springfield, Mass., assignors to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Sept. 28, 1920. Serial No. 413,412. Term of patent 14 years.

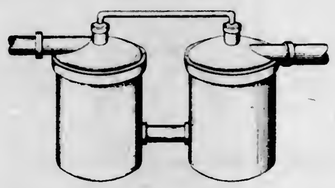


The ornamental design for a tire as shown.

57,572. MOISTURE-TANK FOR A BROODER-HEATER. MARY CHASE BARON, Hampden Meadows, R. I. Filed Aug. 26, 1920. Serial No. 406,238. Term of patent 14 years.

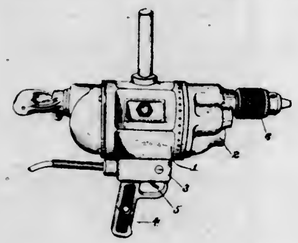
The ornamental design for a moisture tank for a brooder heater, as shown.

57,573. BROODER-HOOD. MARY CHASE BARON, Hampden Meadows, R. I. Filed Aug. 26, 1920. Serial No 406,239. Term of patent 14 years.



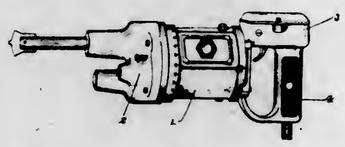
The ornamental design for a brooder hood, as shown

57,574. LIGHT ATTACHMENT FOR SOUND-REPRODUCING MACHINES. GEORGE E. BERNECKER, Milwaukee, Wis. Filed Aug. 18, 1920. Serial No. 404,429. Term of patent 14 years.



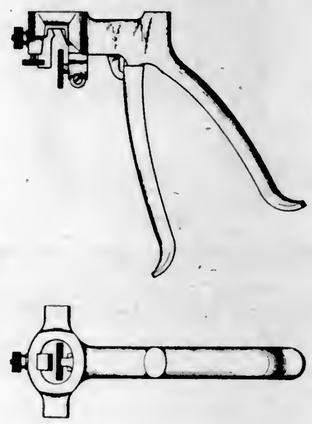
The ornamental design for a light attachment for sound reproducing machines, as shown.

57,575. SEWAGE APPARATUS. LOUIS PERKINS BERRY, Jr., Memphis, Tenn. Filed Apr. 9, 1920. Serial No. 372,677. Term of patent 14 years.



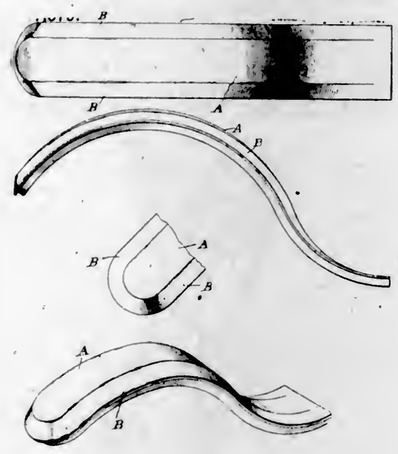
The ornamental design for sewage apparatus as shown.

57,576. PORTABLE ELECTRIC TOOL. SAMUEL DUNCAN BLACK and ALONZO G. DECKER, Towson, Md., assignors, by mesne assignments, to Second National Bank of Baltimore, trustee, Baltimore, Md. Filed May 17, 1920. Serial No. 382,170. Term of patent 14 years.



The ornamental design for a portable electric tool, substantially as shown and described.

57,577. PORTABLE ELECTRIC VALVE-GRINDER. SAMUEL DUNCAN BLACK and ALONZO G. DECKER, Towson, Md., assignors, by mesne assignments, to Second National Bank of Baltimore, trustee, Baltimore, Md. Filed May 17, 1920. Serial No. 382,171. Term of patent 14 years.



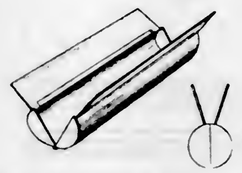
The ornamental design for a portable electric valve grinder, substantially as shown and described.

57,578. SAW-SET. CHRISTIAN BODMER, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 22, 1920. Serial No. 375,902. Term of patent 14 years.

The ornamental design for a saw set, as shown.

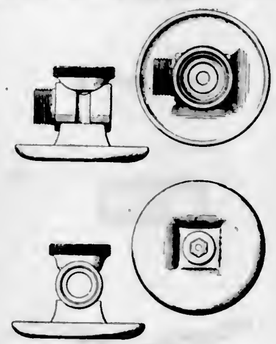
57,579. FENDER. FRED E. BRADFIELD, Davenport, Iowa. Filed Oct. 20, 1919. Serial No. 332,115. Term of patent 7 years.

The ornamental design for a fender substantially as shown and described.

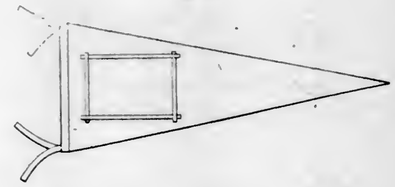


57,580. BUTTERMILK-CROCK. DAVID O. BRANT, Owensmouth, Calif. Filed June 18, 1919. Serial No. 305,185. Term of patent 7 years.

The ornamental design for a buttermilk crock as shown.



57,581. CIGARETTE-FORMING DEVICE. CHARLES S. BRANCH, Hammond, Ind. Filed Aug. 11, 1920. Serial No. 402,912. Term of patent 14 years.

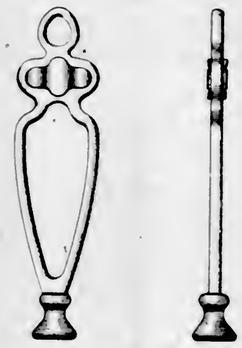


The ornamental design for a cigarette forming device as shown.

57,582. SPRINKLER-BODY. ADOLPH K. BRAUER, Los Angeles, Calif.; Serena Dorathea Brauer, executrix of said Adolph K. Brauer, deceased, assignor to Serena Dorathea Brauer, Los Angeles, Calif. Filed Apr. 21, 1919. Serial No. 291,750. Term of patent 14 years.

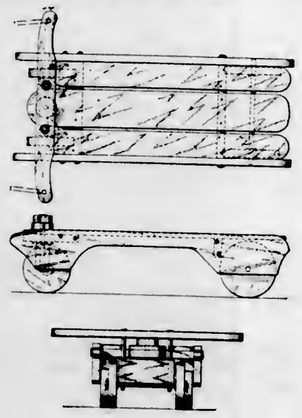
The ornamental design for a sprinkler body substantially as shown.

57,583. PENNANT. ELINOR C. BRIGGS, Pawhuska, Okla. Filed Oct. 8, 1917. Serial No. 195,464. Term of patent 3½ years.



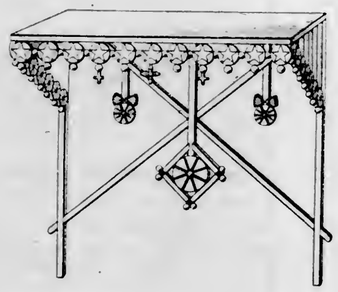
The ornamental design for a pennant, as shown.

57,584. TOOTHBRUSH. ARTHUR A. CAMPBELL, Santa Monica, Calif. Filed Mar. 17, 1919. Serial No. 283,277. Term of patent 14 years.



The ornamental design for a toothbrush, as shown.

57,585. LOOP FOR LIGHTING-FIXTURES. FRED E. CHAMBERS, Coldwater, Mich., assignor to Champion Brass Works, Coldwater, Mich., a Corporation of Michigan. Filed Sept. 2, 1920. Serial No. 407,811. Term of patent 3½ years.

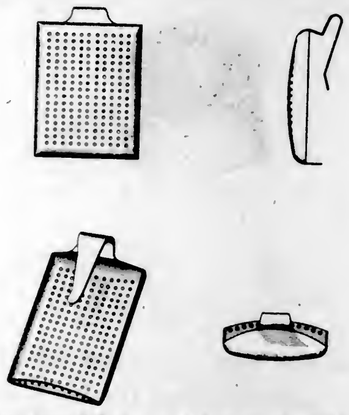


The ornamental design for a loop for lighting fixtures, as shown.

57,586. WHEELED VEHICLE. CLIFFORD C. CHURCH, Needham, Mass. Filed Aug. 19, 1920. Serial No. 404,686. Term of patent 14 years.

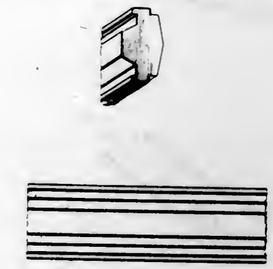
The ornamental design for a wheeled vehicle as shown.

57,587. SHELF. JOHN CORDES, Douglas, N. D. Filed June 26, 1920. Serial No. 392,105. Term of patent 14 years.



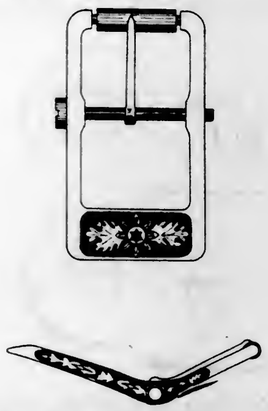
The ornamental design for a shelf as shown.

57,588. COMBINATION TUBE CONTAINER FOR FRUIT SYRUP, FLAVORING EXTRACTS, AND FRUIT ACIDS. STUART L. CRAWFORD, Rochester, N. Y. Filed Oct. 20, 1919. Serial No. 332,090. Term of patent 7 years.



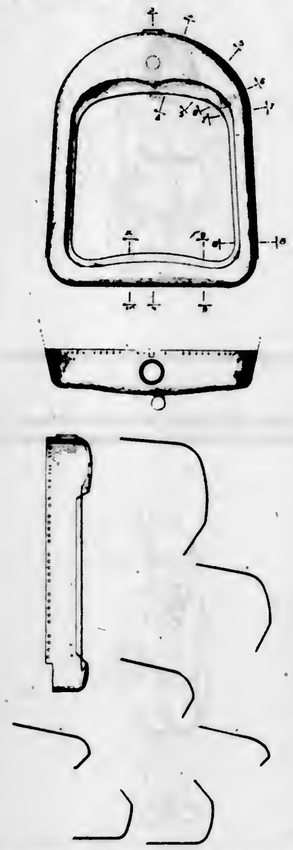
The ornamental design for a combination tube container for fruit syrup, flavoring extracts, and fruit acids, as shown.

57,589. STRAINER. LOUIS DANIELS, New York, N. Y. Filed Aug. 10, 1920. Serial No. 402,707. Term of patent 7 years.



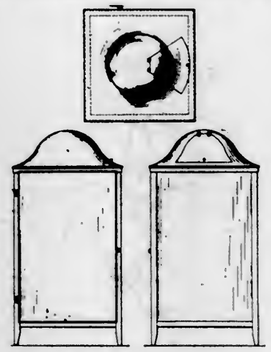
The ornamental design for a strainer, as shown.

57,590. BAR FOR HOLDING PLATE-GLASS STORE-FRONTS. GEORGE W. DAVIS, Lincoln, Nebr. Filed Nov. 3, 1919. Serial No. 335,554. Term of patent 14 years.



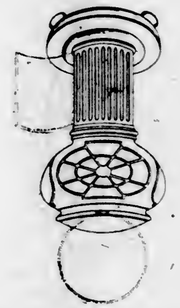
The ornamental design for a bar for holding plate glass store fronts, as shown.

57,591. REPAIR-BUCKLE. WALTER E. DEMPSEY, Craig, Nebr. Filed Sept. 13, 1920. Serial No. 410,017. Term of patent 3½ years.



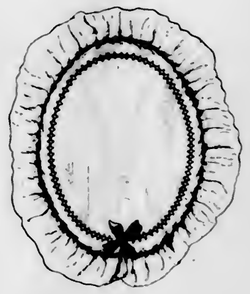
The ornamental design for a repair buckle, as shown.

57,592. AUTOMOBILE-RADIATOR SHELL OR HOOD. EDGARD C. DE SMET, St. Cloud, Minn., assignor to Pan Motor Company, St. Cloud, Minn., a Corporation of Delaware. Filed Dec. 5, 1919. Serial No. 342,855. Term of patent 7 years.



The ornamental design for an automobile radiator shell or hood, as shown and described.

57,593. CASING FOR STREET-RECEPTACLES. FRANKLIN F. DICKERMAN, Philadelphia, Pa. Filed July 10, 1920. Serial No. 395,409. Term of patent 7 years.



The ornamental design for a casing for street receptacles, as shown.

57,594. GRAPHOPHONE. CHARLES DITTMAR, Cincinnati, Ohio. Filed Sept. 22, 1920. Serial No. 412,104. Term of patent 3½ years.

The ornamental design for a graphophone, as shown.

57,595. HAT-LINING. ALEXANDER DOMAN, New York, N. Y., assignor of one-half to NATHAN M. ROSEN, New York, N. Y. Filed Jan. 3, 1921. Serial No. 434,814. Term of patent 14 years.

The ornamental design for a hat-lining as shown.

57,596. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,089. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,597. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,090. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,598. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,091. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,599. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,092. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,600. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,093. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,601. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,094. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,602. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,095. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,603. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,096. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,604. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,097. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,605. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,098. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,606. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,099. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,607. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,100. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,608. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,101. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,609. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,102. Term of patent 14 years.

The ornamental design for a doll, as shown.

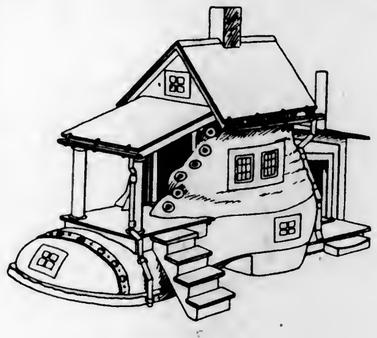
57,610. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,103. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,611. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,104. Term of patent 14 years.

The ornamental design for a doll, as shown.

57,612. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,105. Term of patent 14 years.

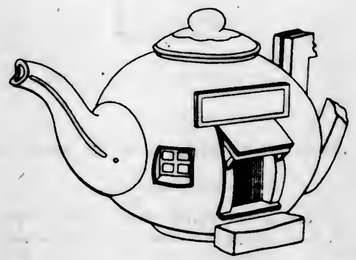


The ornamental design for a doll, as shown.

57,613. DOLL. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,106. Term of patent 14 years.

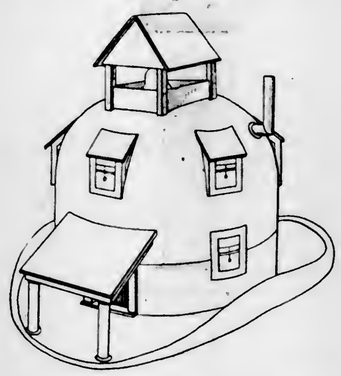
The ornamental design for a doll, as shown.

57,614. DOLL-HOUSE. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,107. Term of patent 14 years.



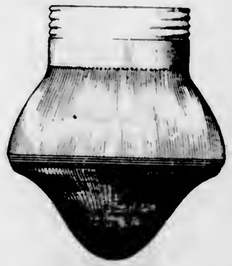
The ornamental design for a doll house, as shown.

57,615. DOLL-HOUSE. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,108. Term of patent 14 years.



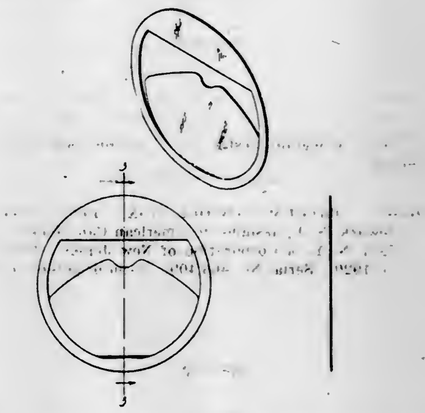
The ornamental design for a doll house, as shown.

57,616. DOLL-HOUSE. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,109. Term of patent 14 years.



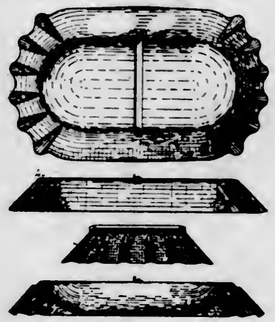
The ornamental design for a doll house, as shown.

57,617. DOLL-HOUSE. WILLIAM DONAHEY, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,110. Term of patent 14 years.



The ornamental design for a doll house, as shown.

57,618. PRISMATIC GLASS GLOBE. WILLIAM A. DORRY, Newark, Ohio, assignor to Holophane Glass Company, Inc., New York, N. Y., a Corporation of New Jersey. Filed Sept. 20, 1920. Serial No. 411,671. Term of patent 14 years.



The ornamental design for a prismatic glass globe, as shown.

57,619. ANTIGLARE DEVICE FOR AUTOMOBILE-HEADLIGHTS. HERBERT R. DRURY, Willoughby, Ohio. Filed Sept. 7, 1920. Serial No. 408,792. Term of patent 7 years.

The ornamental design for an antiglare device for automobile headlights as shown.

57,620. FEED-TROUGH. ALBERT N. EATON, Omaha, Nebr. Filed Sept. 18, 1920. Serial No. 411,328. Term of patent 14 years.

The ornamental design for a feed trough, as shown.

57,621. TALCUM-POWDER BOX. FELIX EBERHART, Newark, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,408. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

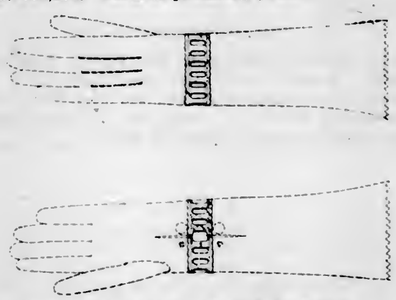
57,622. TALCUM-POWDER BOX. FELIX EBERHART, Newark, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,409. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

57,623. TALCUM-POWDER BOX. FELIX EBERHART, Newark, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,410. Term of patent 14 years.

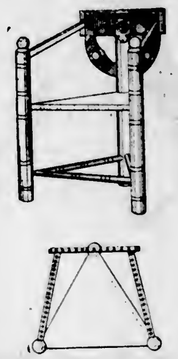
The ornamental design for a talcum powder box, as shown.

57,624. TALCUM-POWDER BOX. FELIX EBERHART, Newark, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 16, 1920. Serial No. 403,959. Term of patent 14 years.



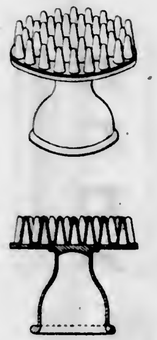
The ornamental design for a talcum powder box, as shown.

57,625. TALCUM-POWDER BOX. FELIX EBERHART, Newark, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 23, 1920. Serial No. 412,398. Term of patent 14 years.



The ornamental design for a talcum powder box, as shown.

57,626. GLOVE. HARRY EISENSTEIN, New York, N. Y., assignor to The Montrose Glove, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 31, 1920. Serial No. 434,375. Term of patent 3½ years.

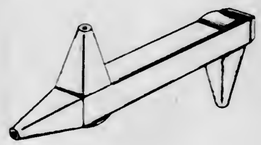


The ornamental design for a glove as shown.

57,627. CHAIR. GUSTAV A. ERIKSON, Chicago, Ill. Filed June 9, 1920. Serial No. 387,771. Term of patent 7 years.

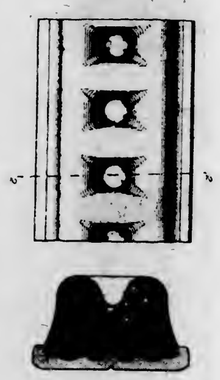
The ornamental design for a chair as shown.

57,628. BEARD-SOFTENER. CHARLES S. FINNEY, Chicago, Ill. Filed Aug. 1, 1919. Serial No. 314,768. Term of patent 3½ years.



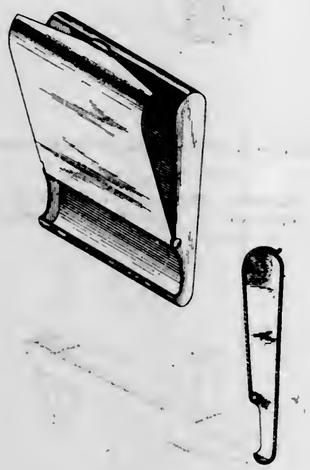
The ornamental design for a beard softener, as shown.

57,629. BUTTON. JACOB FOX, New York, N. Y., assignor to Thaltheimer Brothers, New York, N. Y., a Copartnership composed of Lena Klein and Harry Jonas, East Orange, N. J., and William J. Klein, South Orange, N. J. Filed Oct. 7, 1920. Serial No. 415,460. Term of patent 3½ years.



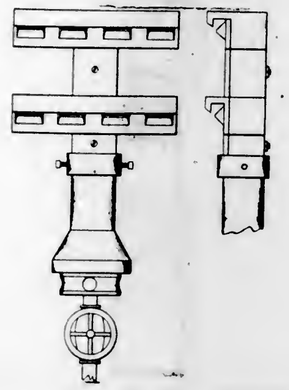
The ornamental design for a button as shown.

57,630. NAIL-SET. BENJAMIN W. FRAMPTON, Cleveland, Ohio. Filed Aug. 30, 1920. Serial No. 407,055. Term of patent 14 years.



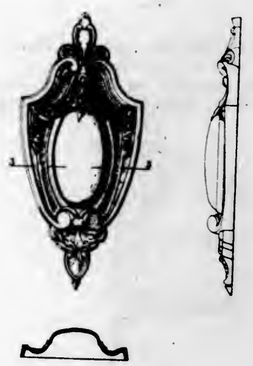
The ornamental design for a nail set, as shown.

57,631. NON-SKID TREAD FOR AUTOMOBILE-TIRES. ELUE O. FRITCH, Belmont, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed May 22, 1920. Serial No. 383,575. Term of patent 14 years.



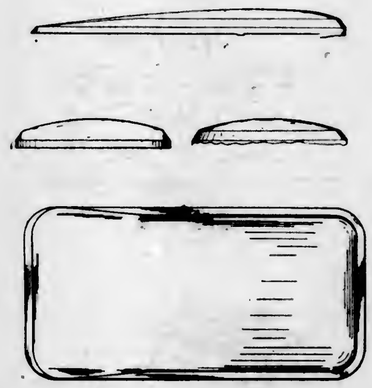
The ornamental design for a non-skid tread for automobile tires as shown.

57,632. MATCH-RECEPTACLE. FRANZ A. FULLER, Newark, N. J., assignor to The J. E. Mergott Company, Newark, N. J., a Corporation of Delaware. Filed Sept. 17, 1920. Serial No. 410,993. Term of patent 14 years.



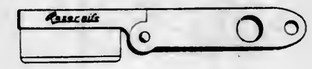
The ornamental design for a match receptacle, as shown.

57,633. GAS-BURNER FOR WATER-HEATERS. LEO V. GELDER, Oakland, Calif. Filed July 19, 1920. Serial No. 397,514. Term of patent 7 years.



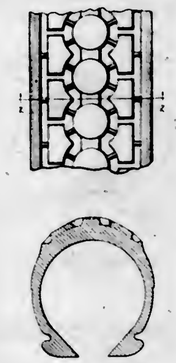
The ornamental design for a gas burner for water heaters, as shown.

57,634. WALL-PLATE FOR MOUNTING ELECTRIC ARMS. JOSEPH GIAMMARINO, New York, N. Y., assignor to Owen Walsh M'f'g. Co., New York, N. Y., a Corporation of New York. Filed Sept. 20, 1920. Serial No. 411,668. Term of patent 3½ years.



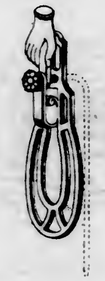
The ornamental design for a wall plate for mounting electric arms, as shown.

57,635. AUTOMOBILE-TOP. LEO GILLIG and CHESTER GILLIG, San Francisco, Calif. Filed Oct. 8, 1919. Serial No. 329,372. Term of patent 7 years.



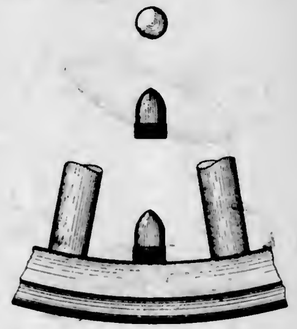
The new and ornamental design for an automobile top substantially as shown.

57,636. RAZOR-KNIFE. JULES P. GITS, Chicago, Ill. Filed Dec. 22, 1920. Serial No. 432,631. Term of patent 14 years.



The ornamental design for a razor knife as shown.

57,637. TIRE. RICHARD P. GOURLEY, Springfield, and HAROLD P. PARTENHEIMER, Chicopee Falls, Mass., assignors to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Sept. 28, 1920. Serial No. 413,410. Term of patent 14 years.



The ornamental design for a tire as shown.

57,638. SCARFPIN OR SIMILAR ARTICLE OF JEWELRY. ROBERT J. GREEN, St. Louis, Mo. Filed Oct. 30, 1920. Serial No. 420,822. Term of patent 7 years.

The ornamental design for a scarfpin or similar article of jewelry as shown.

57,639. CAP FOR AIR-VALVES. PATRICK J. GRIFFIN, Boston, Mass. Filed Feb. 4, 1921. Serial No. 442,550. Term of patent 7 years.

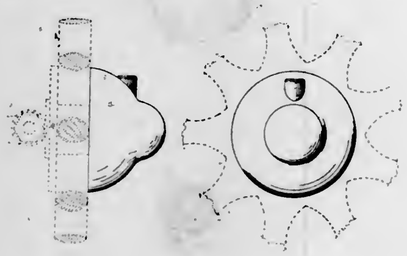
The ornamental design for a cap for air valve as shown.

57,640. PARKING-LIGHT FOR AUTOMOBILES. ANGUS R. GROSS, Baltimore, Md. Filed Oct. 19, 1920. Serial No. 418,110. Term of patent 14 years.

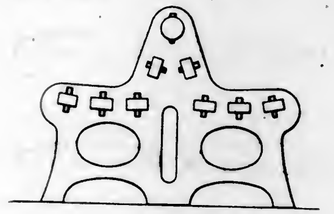
The ornamental design for a parking light for automobiles, substantially as shown.

57,641. WRISTBAND-CLASP. FREDERICK G. GRUEN, Cincinnati, Ohio, assignor to The D. Gruen Sons & Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 20, 1920. Serial No. 418,333. Term of patent 14 years.

The ornamental design for a wrist-band clasp as shown.



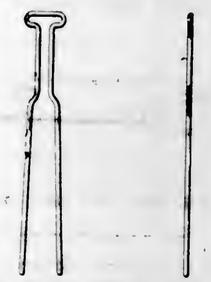
57,642. BATHING-CAP. GEORGE K. GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, a Corporation of New York. Filed July 3, 1920. Serial No. 393,979. Term of patent 14 years.



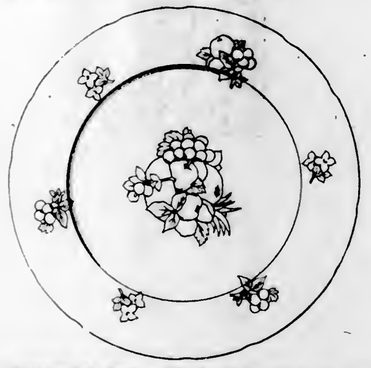
The ornamental design for a bathing cap, as shown.

57,643. AUTOMOBILE-WHEEL-HUB CAP. RAYMOND M. GUY, Winfield, Kans., assignor to Guy Auto Hub Lock Company, Winfield, Kans., a Corporation. Filed Feb. 24, 1920. Serial No. 361,006. Term of patent 7 years.

The ornamental design for an automobile wheel hub cap, as shown.

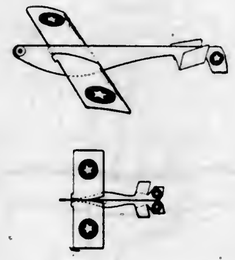


57,644. DOUBLE BENCH. LEO G. HAASE, Pasadena, Calif. Filed Oct. 13, 1919. Serial No. 330,492. Term of patent 14 years.



The ornamental design for a double bench as shown.

57,645. HAIRPIN. GEORGE H. HAKE, St. Louis, Mo.; Anna Hake administratrix of said George H. Hake, deceased. Filed July 29, 1918. Serial No. 247,344. Term of patent 14 years.

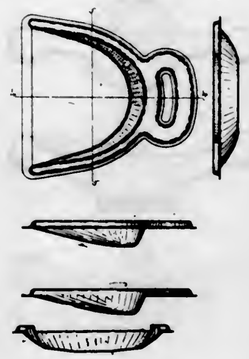


The ornamental design for a hairpin, as shown.

57,646. PLATE OR SIMILAR ARTICLE. ARNOLD FREDERICK HANCOCK, Stoke-upon-Trent, England, assignor to Edward B. Dickinson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 29, 1920. Serial No. 413,624. Term of patent 14 years.

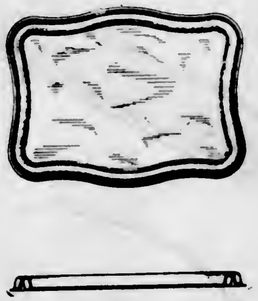
The ornamental design for a plate or similar article, as shown.

57,647. TOY PAPER AEROPLANE. BLAINE H. HARRIS, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed June 3, 1920. Serial No. 386,362. Term of patent 7 years.



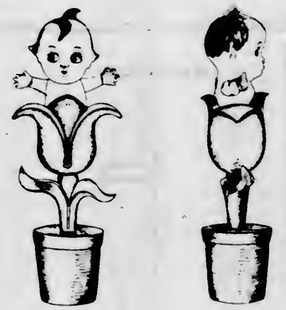
The ornamental design for a toy paper aeroplane as shown.

57,648. AUTOMOBILE TAIL OR SIGNAL LIGHT. WILLIAM HENDRY, Tacoma, Wash. Filed May 29, 1920. Serial No. 385,372. Term of patent 14 years.



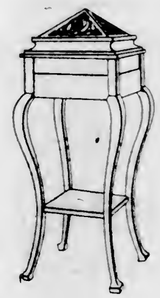
The ornamental design for an automobile tail or signal light, as shown.

57,649. SINK-SCRAPER. WILLIAM J. HINES, Hartford, Conn., assignor to The Fuller Brush Company, a Corporation of Connecticut. Filed Sept. 11, 1920. Serial No. 409,713. Term of patent 14 years.



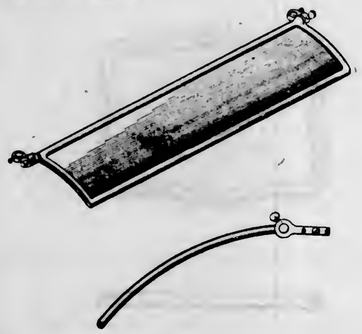
The ornamental design for a sink scraper, as shown.

57,650. TRAY. WILLIAM J. HINES, Hartford, Conn., assignor to The Fuller Brush Company, a Corporation of Connecticut. Filed Oct. 18, 1920. Serial No. 417,853. Term of patent 14 years.



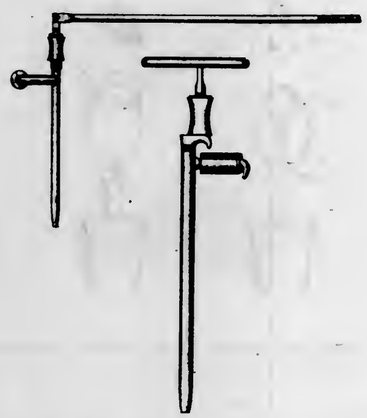
The ornamental design for a tray, as shown.

57,651. STATUETTE, SCULPTURE, OR ARTICLE OF SIMILAR NATURE. EMIL HOENIG, New York, N. Y. Filed Oct. 29, 1920. Serial No. 420,575. Term of patent 3½ years.



The ornamental design for a statuette, sculpture, or article of similar nature, as shown.

57,652. PHONOGRAPH-CABINET. WILLIAM B. HOLLINGSHEAD, Mount Vernon, N. Y. Filed Jan. 23, 1920. Serial No. 353,577. Term of patent 3½ years.

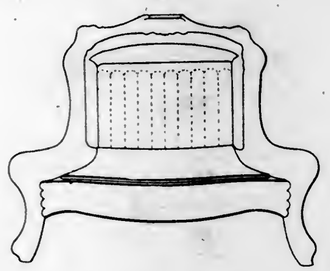


The ornamental design for a phonograph cabinet illustrated in the drawing.

57,653. SUNSHADE AND VISOR FOR VEHICLE-WINDSHIELDS. GEORGE A. HOLSBERG, San Francisco, Calif. Filed Feb. 3, 1921. Serial No. 442,298. Term of patent 3½ years.

The ornamental design for a sunshade and visor for vehicle windshields, as shown.

57,654. TIRE-PLACER. CHARLES A. HORNBURG, Waco, Tex. Filed Feb. 13, 1920. Serial No. 358,401. Term of patent 3½ years.

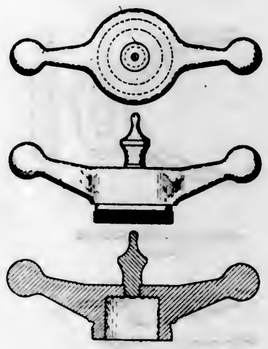


The ornamental design for a tire placer, as shown.

57,655. ATTACHMENT-PLUG RECEPTACLE. HARVEY HUBBELL, Bridgeport, Conn. Filed Oct. 14, 1920. Serial No. 417,052. Term of patent 14 years.

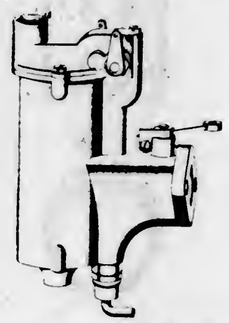
The ornamental design for an attachment plug receptacle, substantially as shown.

57,656. GAS-STOVE. ALFRED H. HUMPHREY, New York, N. Y. Filed Oct. 18, 1920. Serial No. 417,850. Term of patent 14 years.



The ornamental design for a gas stove as shown.

57,657. FINGER-RING. JACOB A. JACOBS, St. Louis, Mo., assignor to Eisenstadt Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 8, 1920. Serial No. 429,291. Term of patent 14 years.

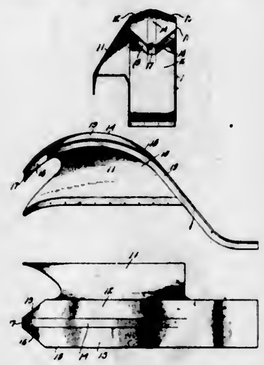


The ornamental design for a finger ring as shown.

57,658. RADIATOR-CAP. SAMUEL JAFFE, Richmond, Ind. Filed Feb. 15, 1921. Serial No. 445,264. Term of patent 14 years.

The ornamental design for a radiator cap, as shown.

57,659. CARBURETER BODY OR CASING. CHARLES E. JOHNSON, Denver, Colo., assignor of one-third to William A. Johnson and one-third to Simon Bitterman, Denver, Colo. Filed May 12, 1919. Serial No. 296,702. Term of patent 14 years.

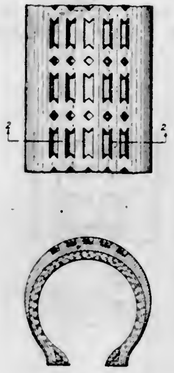


The ornamental design for a carbureter body or casing as shown.

57,660. COLLAR-HOLDER. WILLIS EUGENE KENNISON, Providence, R. I. Filed Oct. 25, 1920. Serial No. 419,541. Term of patent 14 years.

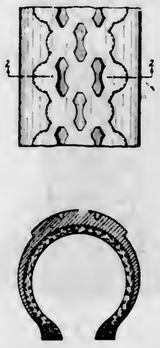
The ornamental design for a collar holder, as shown.

57,661. AUTOMOBILE-FENDER. WILLIAM A. KING, Memphis, Tenn. Filed July 9, 1920. Serial No. 395,169. Term of patent 14 years.



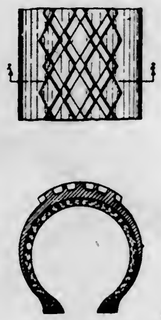
The new original and ornamental design for an automobile fender as shown and described.

57,662. COMBINATION-TOOL. RALPH ELLIS KINGSTON and FRANK W. WOODARD, Rouses Point, N. Y. Filed July 7, 1920. Serial No. 394,594. Term of patent 14 years.



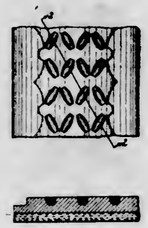
The ornamental design for a combination tool, as shown.

57,663. TIRE. JOHN P. KIRCH, Pittsburgh, Pa. Filed June 26, 1920. Serial No. 392,087. Term of patent 14 years.



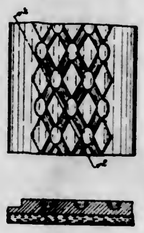
The ornamental design for a tire, as shown.

57,664. TIRE. JOHN P. KIRCH, Pittsburgh, Pa. Filed June 26, 1920. Serial No. 392,088. Term of patent 14 years.



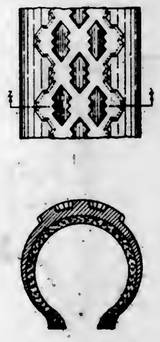
The ornamental design for a tire, as shown.

57,665. TIRE. JOHN P. KIRCH, Pittsburgh, Pa. Filed June 26, 1920. Serial No. 392,089. Term of patent 14 years.



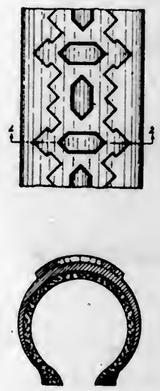
The ornamental design for a tire, as shown.

57,666. TIRE. JOHN P. KIRCH, Pittsburgh, Pa. Filed June 26, 1920. Serial No. 392,090. Term of patent 14 years.



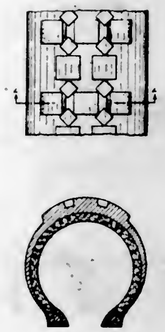
The ornamental design for a tire, as shown.

57,667. TIRE. JOHN P. KIRCH, Pittsburgh, Pa. Filed June 26, 1920. Serial No. 392,091. Term of patent 14 years.



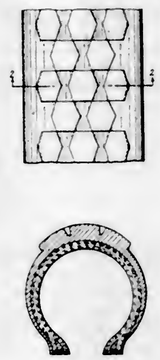
The ornamental design for a tire, as shown.

57,668. TIRE. JOHN P. KIRCH, Pittsburgh, Pa. Filed June 26, 1920. Serial No. 392,092. Term of patent 14 years.



The ornamental design for a tire, as shown.

57,669. TIRE. JOHN P. KIRCH, Pittsburgh, Pa. Filed June 26, 1920. Serial No. 392,093. Term of patent 14 years.

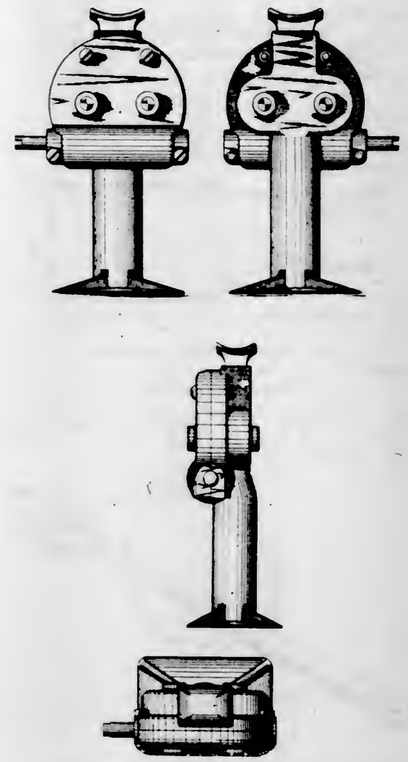


The ornamental design for a tire, as shown.

57,670. TIRE. JOHN P. KIRCH, Pittsburgh, Pa. Filed June 26, 1920. Serial No. 392,094. Term of patent 14 years.

The ornamental design for a tire, as shown.

57,671. TIRE. JOHN P. KIRCH, Pittsburgh, Pa. Filed June 26, 1920. Serial No. 392,095. Term of patent 14 years.

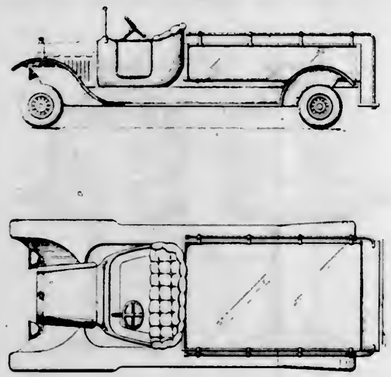


The ornamental design for a tire, as shown.

57,672. SURFACE OF A BOTTLE. ARTHUR J. KNOWLES, Chattanooga, Tenn. Filed Sept. 3, 1920. Serial No. 408,032. Term of patent 14 years.

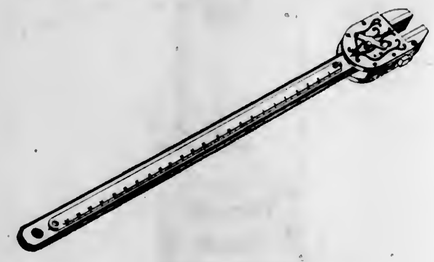
The ornamental design for the surface of a bottle, as shown.

57,673. LIFTING-JACK. JOHN C. KOPF, Bellevue borough, Pa., assignor to The Duff Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 27, 1920. Serial No. 399,409. Term of patent 14 years.



The ornamental design for a lifting jack, as shown.

57,674. ARM FOR LIGHTING-FIXTURES. STEPHEN KOSTSZEWSKI, New York, N. Y., assignor to Robert Findlay Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Sept. 14, 1920. Serial No. 410,348. Term of patent 7 years.

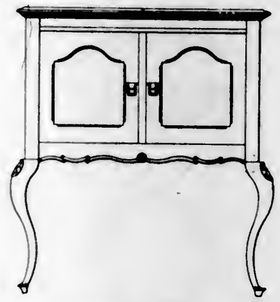


The ornamental design for an arm for lighting fixtures, as shown.

57,675. AUTOMOBILE SERVICE-CAR. MORTON T. KRESTELLER, San Francisco, Calif. Filed Nov. 22, 1920. Serial No. 425,914. Term of patent 7 years.

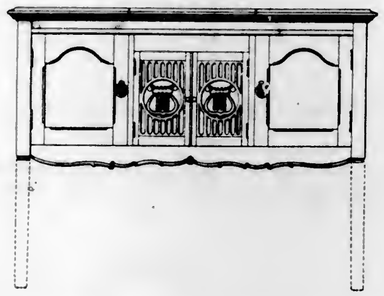
The ornamental design for an automobile service car, as shown.

57,676. WRENCH. JOHN KROPACZ, Calgary, Alberta, Canada. Filed Oct. 30, 1920. Serial No. 420,823. Term of patent 7 years.



The ornamental design for a wrench, as shown.

57,677. AUTOMOBILE-RADIATOR CAP. JOHN W. LAKE, Dallas, and JAMES R. CHESNUT, Fort Worth, Tex. Filed Sept. 7, 1920. Serial No. 408,787. Term of patent 7 years.



The ornamental design for an automobile radiator cap as shown.

57,678. PHONOGRAPH-CABINET OR SIMILAR ARTICLE. ARTHUR FOTY LA PIERRE, St. Louis, Mo. Filed Nov. 8, 1919. Serial No. 336,754. Term of patent 3½ years.

The ornamental design for a phonograph cabinet or similar article, as shown.

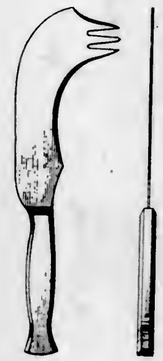
57,679. PHONOGRAPH-CABINET OR SIMILAR ARTICLE. ARTHUR FOTY LA PIERRE, St. Louis, Mo. Filed Nov. 8, 1919. Serial No. 336,755. Term of patent 3½ years.

The ornamental design for a phonograph cabinet or similar article, as shown.

57,680. CABINET-PHONOGRAPH. WALTER LANE, Holland, Mich., assignor to Bush & Lane Piano Company, a Corporation of Illinois. Filed Oct. 28, 1918. Serial No. 260,076. Term of patent 14 years.

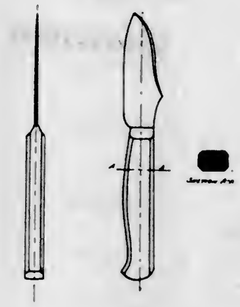
The ornamental design for a cabinet phonograph, as shown.

57,681. WEDDING-RING. MYER H. LEBOLT, Chicago, Ill., assignor to Lebolt & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 26, 1920. Serial No. 426,653. Term of patent 14 years.



The ornamental design for a wedding ring, as shown

57,682. SHOCK-ABSORBER. OSCAR E. LEIGHTON, Allston, Mass., assignor to Ralph M. Lovejoy, Boston, Mass. Filed Dec. 15, 1920. Serial No. 430,984. Term of patent 14 years.

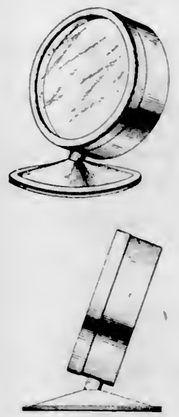


An ornamental design for a shock absorber, as shown.

57,683. COMBINATION KNIFE AND FORK. JOHN H. LICKERT, Evanston, Ill., assignor to Kit-Chin-Kit Corporation, Evanston, Ill., a Corporation of Illinois. Filed Mar. 5, 1920. Serial No. 363,574. Term of patent 14 years.

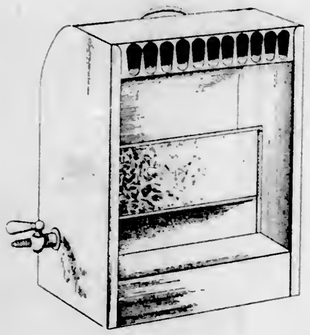
The ornamental design for a combination knife and fork, as shown.

57,684. CANNING-KNIFE. JOHN H. LICKERT, Evanston, Ill., assignor to Kit-Chin-Kit Corporation, Evanston, Ill., a Corporation of Illinois. Filed Aug. 16, 1920. Serial No. 403,964. Term of patent 14 years.



The ornamental design for a canning knife, as shown.

57,685. PUFF FOR APPLYING POWDER AND LIQUID PREPARATIONS. FREDERICK LOBL, Middleboro, Mass. Filed Sept. 29, 1920. Serial No. 413,627. Term of patent 14 years.

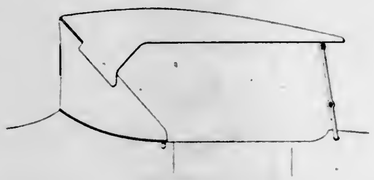


The ornamental design for a puff for applying powder and liquid preparations, as shown.

57,686. DESK-THERMOMETER. SAMUEL C. LORD, Milton, Mass., assignor to Standard Thermometer Company, Portland, Me., a Corporation of Maine. Filed Nov. 23, 1920. Serial No. 426,090. Term of patent 14 years.

The ornamental design for a desk thermometer, as shown.

57,687. PORTABLE GAS-HEATER. LEON P. LOWE, San Francisco, Calif. Filed Aug. 23, 1920. Serial No. 405,518. Term of patent 14 years.



The ornamental design for a portable gas heater, as shown.

57,688. COMBINED OIL-STOVE AND LAMP-FRAME. ANTOINETTE E. K. LUKASZEWSKA, Buffalo, N. Y. Filed July 30, 1920. Serial No. 400,243. Term of patent 14 years.

The ornamental design for a combined oil stove and lamp frame, as shown.

57,689. TOP FOR MOTOR-VEHICLES. GEORGE E. MADISON, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 10, 1919. Serial No. 343,926. Term of patent 14 years.

The ornamental design for a top for motor vehicles, as shown.

57,690. ARM FOR LIGHTING-FIXTURES. FREDERICK K. MAERZ, Cleveland, Ohio, assignor to The Morreau Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 20, 1920. Serial No. 411,663. Term of patent 7 years.

The ornamental design for an arm for lighting fixtures, as shown.

57,691. ARM FOR LIGHTING-FIXTURES. FREDERICK K. MAERZ, Cleveland, Ohio, assignor to The Morreau Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 20, 1920. Serial No. 411,664. Term of patent 7 years

The ornamental design for an arm for lighting fixtures, as shown.

57,692. LIGHTING-FIXTURE. FREDERICK K. MAERZ, Cleveland, Ohio, assignor to The Morreau Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 20, 1920. Serial No. 411,665. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

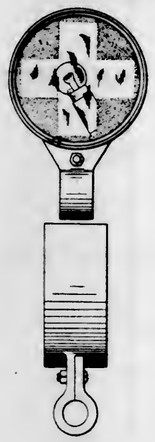
57,693. LIGHTING-FIXTURE. FREDERICK K. MAERZ, Cleveland, Ohio, assignor to The Morreau Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 20, 1920. Serial No. 411,666. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

57,694. COLLAR-HOLDER. RALPH K. MAKER and FRED S. MAKER, Providence, R. I. Filed Sept. 15, 1920. Serial No. 410,568. Term of patent 14 years.

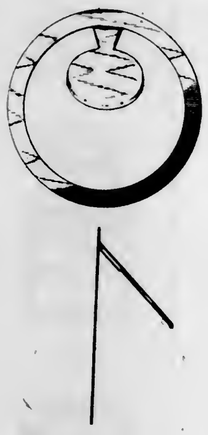
The ornamental design for a collar holder, as shown.

57,695. BOTTLE. RUTH J. MAURER, La Crosse, Wis. Filed Apr. 2, 1920. Serial No. 370,879. Term of patent 7 years.



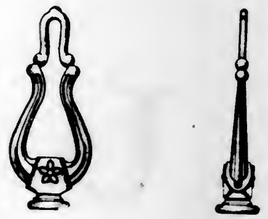
The ornamental design for a bottle, as shown.

57,696. JAR. RUTH J. MAURER, La Crosse, Wis. Filed Apr. 2, 1920. Serial No. 370,880. Term of patent 7 years.



The ornamental design for a jar, as shown.

57,697. PHYSICIAN'S TRAFFIC-SIGNAL. JESSE B. MCAFEE, ELLERY D. BENTON, and MILTON K. DAVIS, Dallas, Tex. Filed Oct. 11, 1920. Serial No. 416,328. Term of patent 3½ years.



The design for a physician's traffic signal as shown.

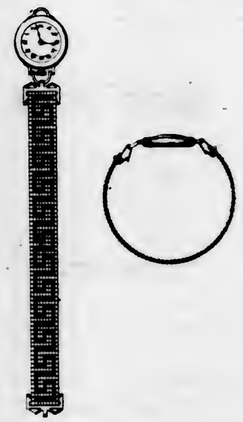
57,698. HEADLIGHT-DIMMER. ULYSSES S. MCCORMICK, Buffalo, N. Y., assignor of one-fourth to Cyrus L. Barber, Buffalo, N. Y. Filed Oct. 25, 1920. Serial No. 419,529. Term of patent 7 years.

The ornamental design for a headlight dimmer, as shown.

57,699. LOOP FOR LIGHTING-FIXTURES. GLENN E. MCFADDEN, Lincoln, Nebr., assignor to Champion Brass Works, Coldwater, Mich., a Corporation of Michigan. Filed Sept. 2, 1920. Serial No. 407,813. Term of patent 3½ years.

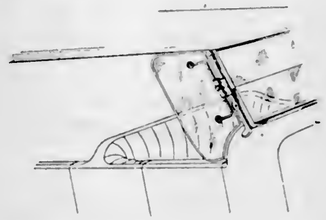
The ornamental design for a loop for lighting fixtures, as shown.

57,700. DESK-STAND FOR HAND-TELEPHONES. ERNEST S. MCLARN, Glenwood Landing, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 11, 1920. Serial No. 402,908. Term of patent 14 years.



The ornamental design for a desk stand for hand telephones, as shown.

57,701. DESK-STAND FOR HAND-TELEPHONES. ERNEST S. MCLARN, Glenwood Landing, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 11, 1920. Serial No. 402,909. Term of patent 14 years.



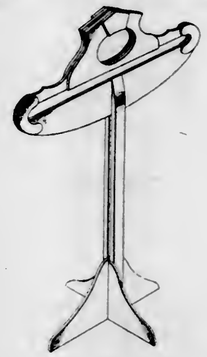
The ornamental design for a desk stand for hand telephones, as shown.

57,702. BRACELET. EDWARD H. MILLER, New York, N. Y. Filed Oct. 11, 1920. Serial No. 416,321. Term of patent 7 years.

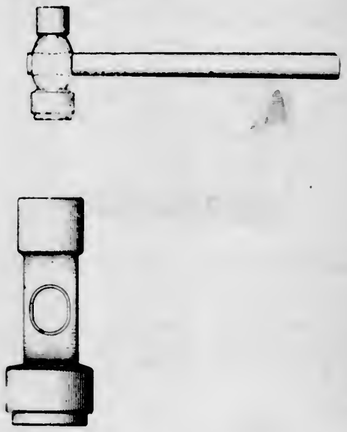
The ornamental design for a bracelet as shown.

57,703. WINDSHIELD. JOHN A. MILLER, Los Angeles, Calif. Filed June 15, 1920. Serial No. 389,245. Term of patent 7 years.

The ornamental design for a windshield as shown.

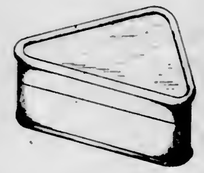


57,704. CLASS PIN OR EMBLEM. JOHN CLIFFORD MILLER, Cincinnati, Ohio. Filed June 8, 1920. Serial No. 387,466. Term of patent 14 years.



The ornamental design for a class pin or emblem, as shown and described.

57,705. DISPLAY-STAND. MORRIS MARCUS MILLS, San Antonio, Tex. Filed Oct. 11, 1920. Serial No. 416,320. Term of patent 14 years.

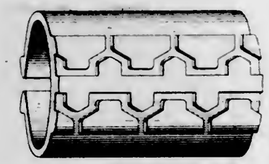


The ornamental design for a display stand as shown.

57,706. CUSHION-HAMMER. WALTER MOORHOUSE, West New York, N. J. Filed May 7, 1920. Serial No. 379,684. Term of patent 7 years.

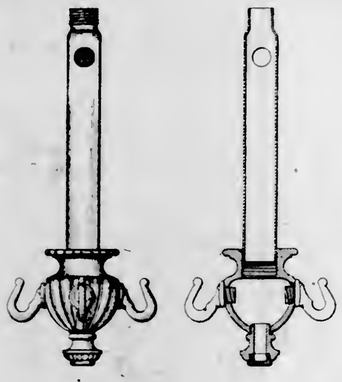
The ornamental design for a cushion hammer, as shown.

57,707. JAR OR SIMILAR CONTAINER. JAMES C. MORRISON, Highland Park, Mich., assignor to Nyal Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 16, 1919. Serial No. 290,615. Term of patent 14 years.



The ornamental design for a jar or similar container, substantially as shown.

57,708. AUTOMOBILE-SIGNAL. EARNEST E. MULLVAIN, Berkeley, Calif., assignor to Edward C. Streich, M. C. Streich, J. E. Manning, E. E. Mullvain, and Van A. Shafer, trustees for National Auto Signal Company. Filed Oct. 2, 1919. Serial No. 328,070. Term of patent 14 years.

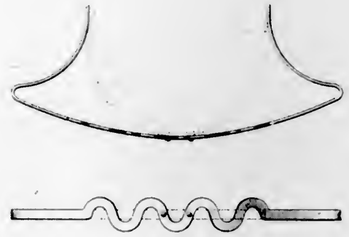


The ornamental design for an automobile signal substantially as shown.

57,709. VEHICLE-TIRE. EMIL H. NAHM, Cleveland, Ohio, assignor to The Ideal Tire and Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 16, 1920. Serial No. 403,954. Term of patent 3½ years.

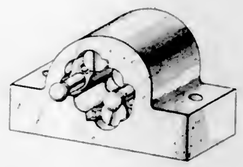
The ornamental design for a vehicle tire as shown.

57,710. COMBINED CHANDELIER STEM AND DISTRIBUTER. BARNET NEWLAND, New York, N. Y. Filed May 10, 1920. Serial No. 380,425. Term of patent 7 years.



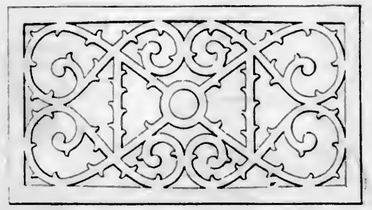
The ornamental design for a combined chandelier stem and distributer, as shown.

57,711. COLLAR-HOLDER. ALFRED J. NEWTON, Providence, R. I. Filed Oct. 18, 1920. Serial No. 417,844. Term of patent 3½ years.



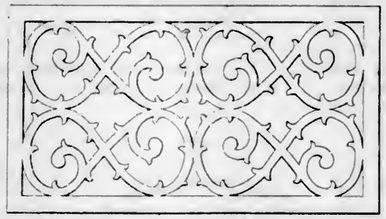
The ornamental design for a collar holder, as shown.

57,712. BUMPER-BAR. RICHARD T. NEWTON, New York, N. Y. Filed Jan. 24, 1921. Serial No. 439,700. Term of patent 14 years.



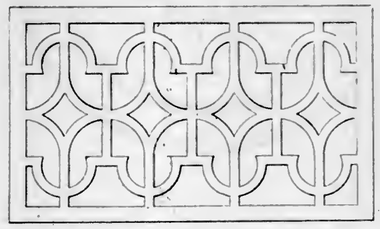
The ornamental design for a bumper bar, as shown.

57,713. PLUG-CONTACT DEVICE. WALTER E. NOURSE, Boston, Mass., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 21, 1920. Serial No. 405,203. Term of patent 14 years.



The ornamental design for a plug contact device as shown.

57,714. GRILLE FOR TALKING-MACHINES. SISSAK K. OUZOUN-BOGHOSSIAN, Washington, D. C. Filed Oct. 25, 1920. Serial No. 419,526. Term of patent 3½ years.

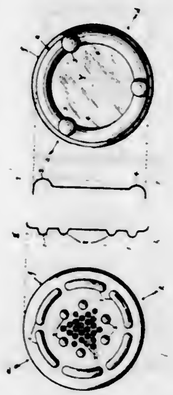


The ornamental design for a grille for talking-machines, as shown.

57,715. GRILLE FOR TALKING-MACHINES. SISSAK K. OUZOUN-BOGHOSSIAN, Washington, D. C. Filed Oct. 25, 1920. Serial No. 419,527. Term of patent 3½ years.

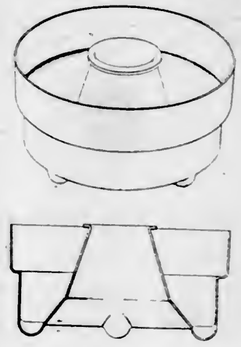
The ornamental design for a grille for talking-machines, as shown.

57,716. GRILLE FOR TALKING-MACHINES. SISSAK K. OUZOUN-BOGHOSSIAN, Washington, D. C. Filed Jan. 17, 1921. Serial No. 438,008. Term of patent 3½ years.



The ornamental design for a grille for talking machines, as shown.

57,717. GRILLE FOR TALKING-MACHINES. SISSAK K. OUZOUN-BOGHOSSIAN, Washington, D. C. Filed Jan. 17, 1921. Serial No. 438,009. Term of patent 3½ years.



The ornamental design for a grille for talking-machines, as shown.

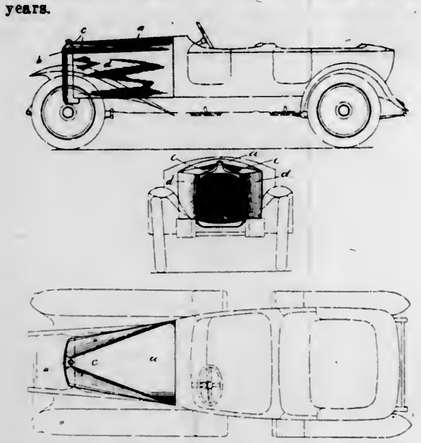
57,718. HOUSING FOR PHONETIC INSTRUMENTS. HERMAN G. PAPE, New York, N. Y. Filed Apr. 27, 1920. Serial No. 377,125. Term of patent 14 years.

The ornamental design for a housing for phonetic instruments as illustrated and described.

57,719. DISH OR SIMILAR RECEPTACLE. FREDERICK PFEIFFER, Sr., Brooklyn, N. Y. Filed Oct. 7, 1920. Serial No. 415,458. Term of patent 14 years.

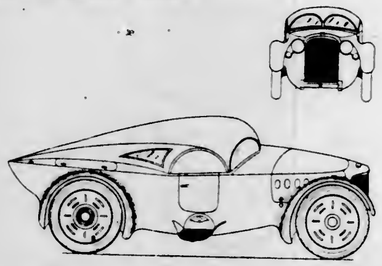
The ornamental design for a dish or similar receptacle, substantially as shown.

57,720. SUNDAE-CUP HOLDER. HUGO PICK, Chicago, Ill., assignor to Albert Pick and Company, Chicago, Ill., a Corporation of Illinois. Filed June 28, 1919. Serial No. 307,486. Term of patent 3½ years.



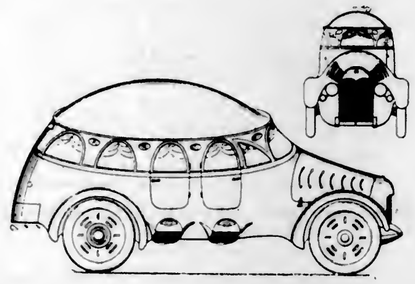
The ornamental design for a sundae cup holder, as shown.

57,721. SOFT-COLLAR FASTENER. SOLOMON PLUMMER, Los Angeles, Calif. Filed Oct. 11, 1920. Serial No. 416,326. Term of patent 7 years.



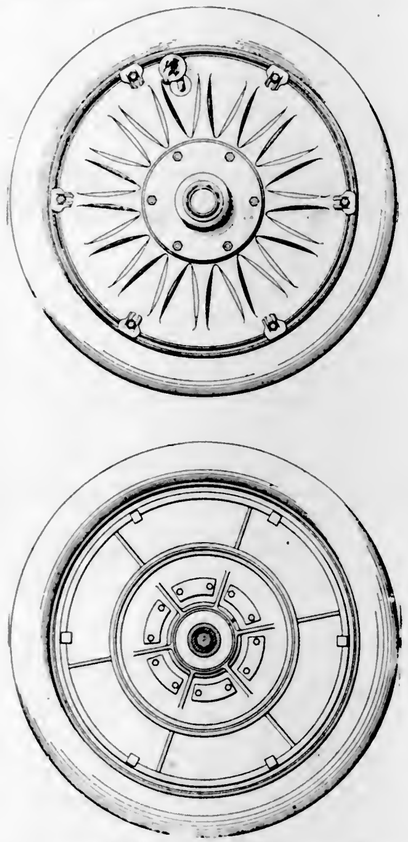
The ornamental design for a soft collar fastener, as shown.

57,722. COMBINED AUTOMOBILE HOOD AND RADIATOR. LAURENCE H. POMEROY, Cleveland, Ohio. Filed Apr. 9, 1920. Serial No. 372,680. Term of patent 14 years.



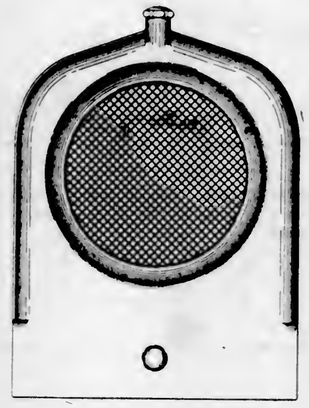
The ornamental design for a combined automobile hood and radiator, as shown.

57,723. AUTOMOBILE-BODY. ERNEST RAPATTONI, Los Angeles, Calif. Filed Aug. 23, 1920. Serial No. 405,558. Term of patent 7 years.



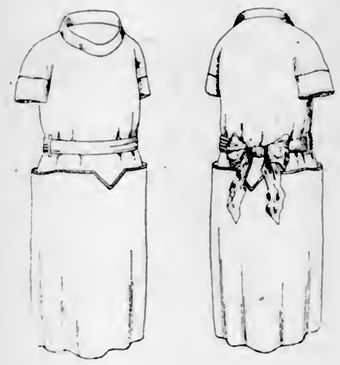
The ornamental design for an automobile body, as shown.

57,724. AUTOMOBILE-BODY. ERNEST RAPATTONI, Los Angeles, Calif. Filed Aug. 23, 1920. Serial No. 405,560. Term of patent 7 years.



The ornamental design for an automobile body, as shown.

57,725. WHEEL. FRANÇOIS RICHARD, Cleveland, Ohio. Filed June 19, 1920. Serial No. 390,265. Term of patent 7 years.

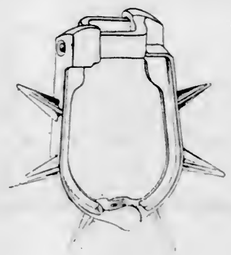


The ornamental design for a wheel as shown.

57,726. AUTOMOBILE-RADIATOR. FRANÇOIS RICHARD, Cleveland, Ohio. Filed July 24, 1920. Serial No. 398,817. Term of patent 7 years.

The ornamental design for an automobile radiator as shown.

57,727. DRESS OR FROCK. SYLVIA SUIBLEY ROBERTSON, Clear Lake, Iowa. Filed Aug. 23, 1920. Serial No. 405,514. Term of patent 14 years.

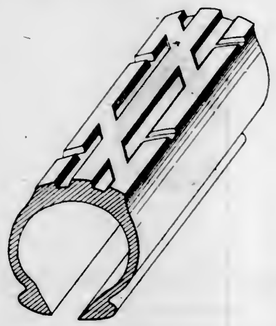


The ornamental design for a dress or frock as shown.

57,728. RING. MORRIS ROSSEIN, Brooklyn, N. Y. Filed Sept. 20, 1920. Serial No. 411,670. Term of patent 14 years.

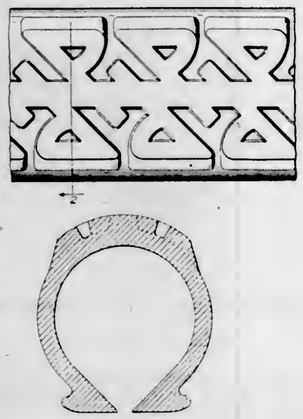
The ornamental design for a ring, as shown.

57,729. AUTOMOBILE-WHEEL LOCK. ALBERT W. SAEGESSER, Granite City, Ill. Filed Sept. 17, 1920. Serial No. 410,994. Term of patent 14 years.



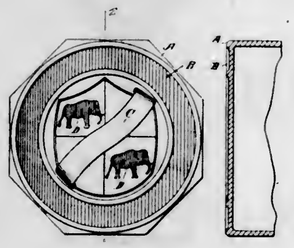
The ornamental design for an automobile wheel lock as shown.

57,730. BASKET. EUGENE SALAZAR, San Francisco, Calif. Filed Aug. 9, 1920. Serial No. 402,443. Term of patent 3½ years.



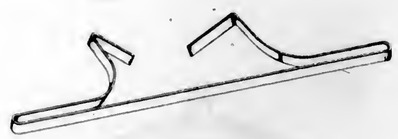
The ornamental design for a basket, as shown.

57,731. TIRE. EDWARD YOCKEY, Milwaukee, Wis. Filed Mar. 31, 1920. Serial No. 370,344. Term of patent 7 years.



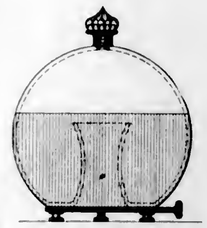
The ornamental design for a tire as shown.

57,732. ELASTIC VEHICLE-TIRE. FLOYD E. SHANNON, Akron, Ohio. Filed Jan. 2, 1920. Serial No. 349,062. Term of patent 14 years.



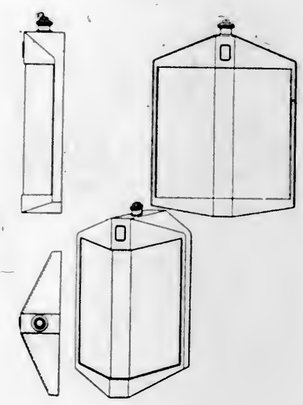
The ornamental design for an elastic vehicle tire as shown.

57,733. HUB-CAP OR SIMILAR ARTICLE. J ED SHERIFF, Mount Vernon, N. Y. Filed Aug. 5, 1920. Serial No. 401,518. Term of patent 7 years.



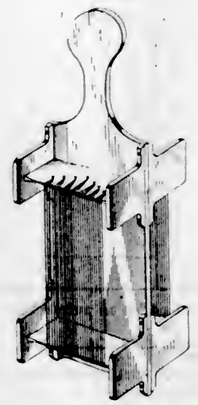
The ornamental design for hub caps or similar article, as shown.

57,734. BUMPER. JOHN W. SIMMONS, Cleveland, Ohio. Filed Oct. 8, 1920. Serial No. 415,703. Term of patent 14 years.



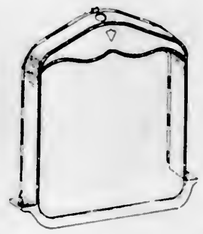
The ornamental design for a bumper as shown.

57,735. FLYCATCHER. GEORGE SINCOLE, Detroit, Mich. Filed July 13, 1920. Serial No. 396,027. Term of patent 7 years.



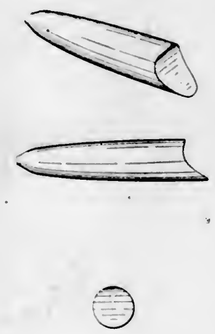
The ornamental design for a fly catcher, as shown.

57,736. AUTOMOBILE-RADIATOR. MAURICE HIPPOLYTE LOUIS SIZAIRE, Park Royal, London, England. Filed Apr. 13, 1920. Serial No. 373,559. Term of patent 14 years.



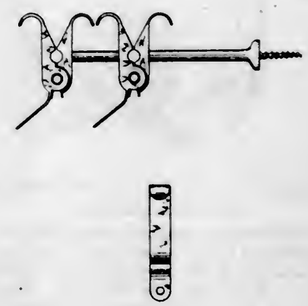
The ornamental design for an automobile radiator as shown.

57,737. COMB-CLEANING DEVICE. LOUIS SPAK, Polar, Wis. Filed June 7, 1920. Serial No. 387,193. Term of patent 7 years.



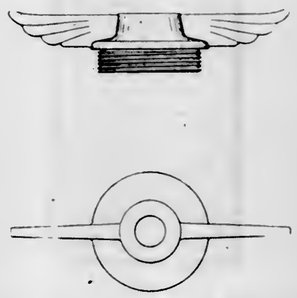
The ornamental design for a comb cleaning device, as shown.

57,738. RADIATOR-SHELL. WILLIAM SPARKS, Jackson, Mich. Filed Dec. 1, 1920. Serial No. 427,631. Term of patent 14 years.



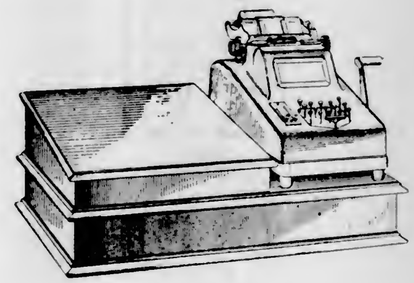
The ornamental design for a radiator shell as shown.

57,739. FISH-BAIT BODY. WILLIAM A. STOLLEY, Dowagiac, Mich. Filed Dec. 5, 1919. Serial No. 342,844. Term of patent 14 years.



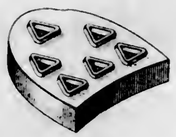
The ornamental design for a fish bait body, as shown.

57,740. CURTAIN-ROD HOLDER. LOUIS G. STRNAD, Chicago, Ill. Filed Aug. 11, 1920. Serial No. 402,907. Term of patent 7 years.



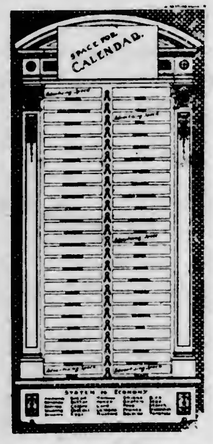
The ornamental design for a curtain rod holder as shown.

57,741. RADIATOR-CAP. HARRY C. STUTZ, Indianapolis, Ind. Filed Oct. 9, 1920. Serial No. 415,919. Term of patent 14 years.



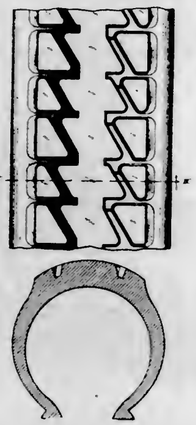
The ornamental design for a radiator cap, as shown.

57,742. CASH-REGISTER. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor to Rockford Milling Machine Company, a Corporation of Illinois. Filed Dec. 11, 1920. Serial No. 430,057. Term of patent 14 years.



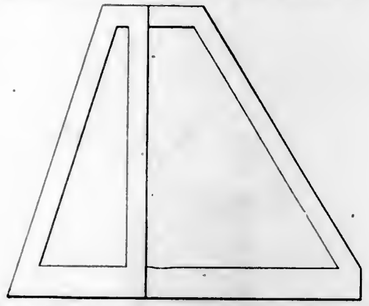
The ornamental design for a cash register, as shown.

57,743. BOOT OR SHOE HEEL. HOWARD G. SWARR, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 16, 1920. Serial No. 389,504. Term of patent 14 years.



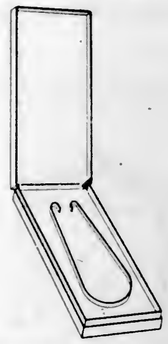
The ornamental design for a boot or shoe heel, as shown.

57,744. COMBINED KITCHEN-REMINDER AND ADVERTISING-CHART. ELMER E. SWIHART, Seattle, Wash., assignor of one-third to Louis Svarz and two-thirds to C. H. Woodis, Seattle, Wash. Filed Sept. 7, 1920. Serial No. 408,789. Term of patent 14 years.



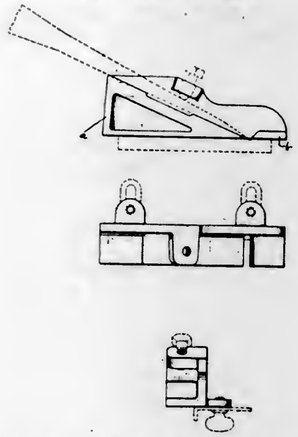
The ornamental design for a combined kitchen reminder and advertising chart, as shown.

57,745. TIRE-TREAD. ALVA C. TERRELL, Kansas City, Mo. Filed Oct. 11, 1920. Serial No. 416,322. Term of patent 14 years.



The ornamental design for a tire tread, as shown.

57,746. AUTOMOBILE SIDE CURTAIN. RALPH K. THOMSON, Sioux Falls, S. D. Filed July 16, 1920. Serial No. 396,844. Term of patent 14 years.

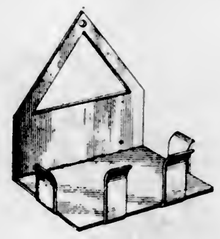


The ornamental design for an automobile side curtain, as shown.

57,747. DISPLAY-BOX FOR BEAD NECKLACES. OSCAR WM. TRILSCH, Whitestone, N. Y. Filed Mar. 20, 1919. Serial No. 283,940. Term of patent 7 years.

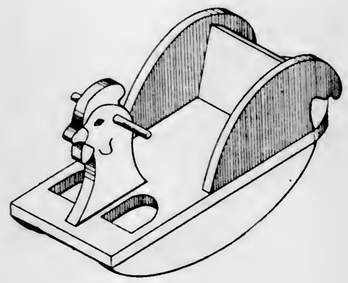
The ornamental design for a display box for bead necklaces, as shown.

57,748. PLANE BLOCK FOR CHISELS. ANDREW TURNBULL, New Britain, Conn. Filed June 6, 1919. Serial No. 302,357. Term of patent 3½ years.



The ornamental design for a plane block for chisels as shown.

57,749. TAILOR'S SHEARS. ERIK ANDREW WACKT, Sycamore, Ill. Filed Oct. 9, 1919. Serial No. 329,618. Term of patent 7 years.

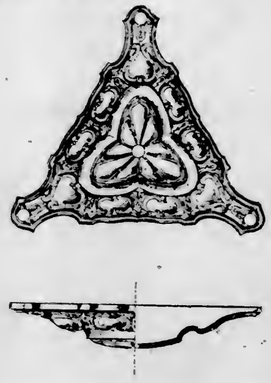


The ornamental design for tailors' shears, as shown.

57,750. MATCH-BOX HOLDER. CHARLES G. WATSON, Alma, Mich. Filed Nov. 4, 1919. Serial No. 335,744. Term of patent 3½ years.

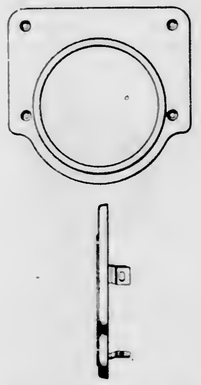
The ornamental design for a match box holder as shown.

57,751. ROCKING-HORSE. JESSE H. WEBB, Rochester, N. Y. Filed Nov. 1, 1919. Serial No. 335,212. Term of patent 7 years.



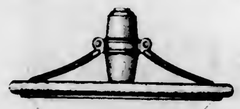
The ornamental design for a rocking horse as shown.

57,752. NAME-PLATE. GARDNER M. WEBBER, Stoneham, Mass. Filed June 22, 1918. Serial No. 241,445. Term of patent 7 years.

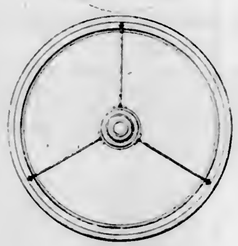


The ornamental design for a name plate, as shown.

57,753. PLATE FOR LIGHTING-FIXTURES. GOTTFRIED WESTPHAL, Guttenberg, N. J., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 30, 1918. Serial No. 231,755. Term of patent 3½ years.

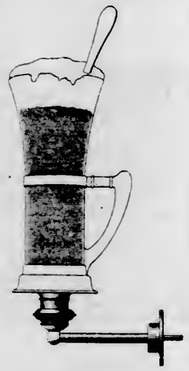


The ornamental design for a plate for lighting fixtures, as shown.

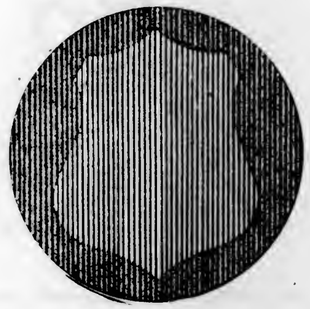


57,754. INSTRUMENT-MOUNT FOR AN AUTOMOBILE INSTRUMENT-BOARD. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Jan. 2, 1920. Serial No. 349,061. Term of patent 14 years.

The ornamental design for an instrument mount for an automobile instrument board as shown.

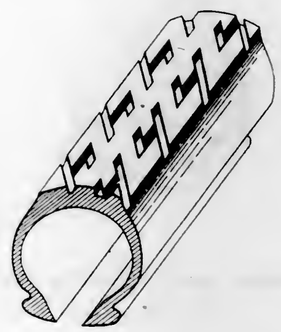


57,755. LIGHTING-FIXTURE-BOWL SUPPORT. HERMAN V. WILLMAN, Maywood, Ill. Filed Sept. 2, 1920. Serial No. 407,814. Term of patent 7 years.



The ornamental design for a lighting fixture bowl support, as shown.

57,756. SIGN. FREDERICK W. WILSON, New York, N. Y. Filed July 1, 1920. Serial No. 393,422. Term of patent 14 years.



The ornamental design for a sign, as shown.

57,757. LENS FOR HEADLIGHTS. CARROL R. WOOTEN, Dallas, Tex., assignor to Daylite Lens Company, a Copartnership composed of Albert E. Doss, Carrol R. Wooten, and Eugene A. Ogletree, Dallas, Tex. Filed Dec. 22, 1919. Serial No. 346,799. Term of patent 3½ years.

The ornamental design for a lens for headlights as shown.

57,758. TIRE. EDWARD YOCKEY, Milwaukee, Wis. Filed Mar. 31, 1920. Serial No. 370,343. Term of patent 7 years.

The ornamental design for a tire as shown.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 26, 1921.

[PUBLISHED MAY 3, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Claims use since January, 1895.

Ser. No. 127,095. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE MANTROSE CORPORATION, New York, N. Y. Filed Jan. 13, 1920.

AL-KO-LAK

Particular description of goods.—Prepared Shellac Substitute.

Claims use since July, 1919.

Ser. No. 127,136. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) MALT-DIASTASE COMPANY, New York, N. Y. Filed Jan. 14, 1920.

M. D's

Particular description of goods.—Non-Alcoholic Liquid, Semiliquid, and Concentrated Malt Extracts.

Claims use since Nov. 26, 1910.

Ser. No. 127,422. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. BOSISTO & Co. PROPRIETARY LIMITED, Melbourne, Victoria, Australia. Filed Jan. 21, 1920.

Particular description of goods.—Eucalyptus-Oil.

Claims use since Jan. 1, 1870.

Ser. No. 127,464. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE BLENDINOL CO., Worcester, Mass. Filed Jan. 22, 1920.

Blendinol

Particular description of goods.—Toilet Waters, Perfumes, Tooth-Paste, Toilet and Face Powder, Face-Creams, Toilet Lotions, Hair-Tonic, Shampoo Liquid, Rouge, Lip-Sticks.

Claims use since Nov. 1, 1919.

Ser. No. 127,687. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HILL, CLARKE & Co. OF CHICAGO, Chicago, Ill. Filed Jan. 28, 1920.

The lining expressing the color red.

Particular description of goods.—Metal-Working Machinery and Tools Consisting of Automatic Machines, Bending-Machines, Bolt and Nut Machinery, Boring-Machines, Drilling-Machines, Broaching-Machines, Buffing-Machines, Centering-Machines, Chucking-Machines, Forging-Machines, Gear-Cutting Machines, Power-Hammers, Hobbing-Machines, Hydraulic Machines, Lathes, Key-Seaters, Milling-Machines, Planers, Shapers, Pressing and Forming Machines, Rolling-Machines, Screw-Machines; Shearing, Punching, and Stamping Machines; Slotters, Tapping-Machines, Threading-Machines, Turret-Machines, and Welding-Machines, and Parts of Said Machines and Tools.

Claims use since April, 1916.

Ser. No. 127,754. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DINOU BROTHERS, Chicago, Ill. Filed Jan. 30, 1920.

Marigold Chocolates

No claim is made to the word "Chocolates" apart from the mark as shown in the drawing.

Particular description of goods.—Chocolate Candies.

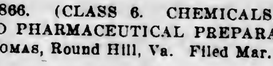
Claims use since Jan. 6, 1920.

Ser. No. 127,759. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHNSON & SONS MANUFACTURING CHEMISTS LIMITED, London, England. Filed Jan. 30, 1920.

No claim being made to the words "Trade Mark" shown on the drawing.

Particular description of goods.—Photographic Developers in Solutions, Powders, Crystals, and Tablets; Photographic Tonings in Solutions, Powders, Crystals, and Tablets; Photographic Intensifiers in Solutions, Powders, Crystals, and Tablets; Photographic Reducers in Solutions, Powders, Crystals, and Tablets; Photographic Fixing, Photographic Varnishes, Photographic Flash-Powders, Photo-Tints; Photographic Sundry Solutions—Namely, Formaldehyde Solution, Glycin Liquid, Hardener, Hypo-Killer, Restrainer, Waxing Solution, Optical Black, Plate-Backing, Spotting Medium; Photographic Chemicals—Acid, Pyrogallic; Amidol, Johnson's; Collodions; Glycin, Johnson's; Gold Chlorid, Gold Chlorid with Sodium, Hydrokinone; Metol, Johnson's; Ortol, Potassium Chloroplatinite, Silver Nitrate, Surgeons' Caustic Points, Litmus and other Test-Books.

Claims use since 1855.



Ser. No. 128,763. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) DEARBORN EQUIPMENT CO., Kalamazoo, Mich. Filed Feb. 24, 1920.

DEARBORN

Particular description of goods.—Axle-Stands, Motor-Stands, Connecting-Rod-Aligning Devices, Bench-Clamps, Piston-Vises, Bushing-Drivers, Ball-Race Tools, Transmission-Drum Clamps, Bending-Irons, Surface Plates, Lifting Devices, Straightening-Presses, Arbor-Presses, Reamers, Burning-in Machines, Running-in Machines, Wheel-Pullers, and Bench-Legs.

Claims use since Nov. 22, 1919.

Ser. No. 128,985. (CLASS 37. PAPER AND STATIONERY.) RAPHAEL SIMS, Pennsboro, W. Va. Filed Feb. 27, 1920.

Particular description of goods.—Bills of Exchange.

Claims use since Feb. 10, 1920.

Ser. No. 129,476. (CLASS 39. CLOTHING.) CARSON PIRIE SCOTT & Co., Chicago, Ill. Filed Mar. 9, 1920.

DIANA

Particular description of goods.—Coats, Capes, Sets, Scarfs, Muffs, Hats, and Caps of Fur.

Claims use since Oct. 8, 1919.

Ser. No. 129,558. (CLASS 17. TOBACCO PRODUCTS.) LIGGETT & MYERS TOBACCO Co., New York, N. Y. Filed Mar. 11, 1920.

BLACK DOG

Particular description of goods.—Leaf-Tobacco.

Claims use since Jan. 2, 1920.

Ser. No. 129,866. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. DAVIS THOMAS, Round Hill, Va. Filed Mar. 17, 1920.

MEADOW BROOK

Particular description of goods.—A Preparation for the Elimination of Worms in Cattle.

Claims use since 1909.

Ser. No. 130,101. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GEORGE F. KEMPEN, Ardmore, Pa. Filed Mar. 23, 1920.

The lines of the drawing are not indicative of color, but are used for shading purposes only.

Particular description of goods.—Ice-Cream, Frozen Dainties, Cake, and Pastry Delicacies.

Claims use since Nov. 1, 1919.

Ser. No. 130,252. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHARLES T. WHITTIER, New York, N. Y. Filed Mar. 26, 1920.

ROYAL

Particular description of goods.—Puddings and Pie-Fillings.

Claims use since Mar. 24, 1920.

Ser. No. 130,329. (CLASS 39. CLOTHING.) ISAACS & KUBRIN, New York, N. Y. Filed Mar. 29, 1920.

Pondbree

Particular description of goods.—Men's Suits in Two and Three Piece Garments.

Claims use since Mar. 18, 1920.

Ser. No. 130,802. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANK W. CLARK, Los Angeles, Calif. Filed Apr. 8, 1920.

NODOR
SOCIETY'S FRIEND

Particular description of goods.—Foot Powder and Deodorant.

Claims use since Feb. 20, 1920.

Ser. No. 132,889. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TAH CHANG SEN & Co., Shanghai, China. Filed May 24, 1920.

TC
SC

Particular description of goods.—Dyes in the Form of Indigo Paste.

Claims use since July 1, 1919.

Ser. No. 132,890. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TAH CHANG SEN & Co., Shanghai, China. Filed May 24, 1920.

No claim being made to the words "Indigo Paste 20%" apart from the mark shown in the drawing.

Particular description of goods.—Dyes in the Form of Indigo Paste.

Claims use since July 1, 1919.

Ser. No. 132,891. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TAH CHANG SEN & Co., Shanghai, China. Filed May 24, 1920.

The Chinese characters appearing on the drawing being translated in English "Autumn Moon on a Still Lake."

Particular description of goods.—Dyes.

Claims use since July 1, 1919.

Ser. No. 132,892. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TAH CHANG SEN & Co., Shanghai, China. Filed May 24, 1920.

The Chinese characters appearing on the drawing being translated in English "The Matrimonial Ceremony of Rats."

Particular description of goods.—Dyes.

Claims use since July 1, 1919.

Ser. No. 132,893. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TAH CHANG SEN & Co., Shanghai, China. Filed May 24, 1920.

The Chinese characters appearing on the drawing being translated in English "Chariot of Gee Ling."

Particular description of goods.—Dyes.

Claims use since July 1, 1919.

Ser. No. 132,894. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TAH CHANG SEN & Co., Shanghai, China. Filed May 24, 1920.

Particular description of goods.—Dyes.

Claims use since July 1, 1919.

Ser. No. 133,560. (CLASS 15. OILS AND GREASES.) SOUTHERN OIL CORPORATION, Kansas City, Mo. Filed June 10, 1920.

DIXIE

Particular description of goods.—Gasolene and Lubricating-Oils.

Claims use since Mar. 15, 1920.

Ser. No. 134,595. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) HIGLEY AND MORTENSEN, San Francisco, Calif. Filed July 6, 1920.

FRISCO

Particular description of goods.—Musical Instruments—Namely, Horns, Drums, Whistles, Mufflers, and Cymbals.

Claims use since Mar. 20, 1920.

Ser. No. 135,201. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) CALIFORNIA PACKING CORPORATION, San Francisco, Calif. Filed July 20, 1920.

Del Monte

Particular description of goods.—Grape-Juice, Pineapple-Juice, and Loganberry-Juice.

Claims use since 1914.

Ser. No. 135,629. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE WILLS MANUFACTURING CO., Scranton, Pa. Filed July 30, 1920.

All wording of which label is disclaimed except the words "Tee-Vo" and "Wills Manufacturing Company."

Particular description of goods.—Bitter Stomach-Tonic.

Claims use since Mar. 24, 1920.

Ser. No. 135,722. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) JAMES HENRY JERRIM, Bromsgrove, England. Filed Aug. 2, 1920.

FIXIE

Particular description of goods.—Machine-Vises, Chucks, Bench-Vises, and Work-Holding Fixtures for Drilling, Sawing, Planing, Cutting, Milling, Turning, and Screw-Cutting Machine Tools.

Claims use since Dec. 7, 1918.

Ser. No. 135,784. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GLORIA ICE CREAM COMPANY, Stockton, Calif. Filed Aug. 4, 1920.

Gloria

Particular description of goods.—Ice-Cream, Water-Ices, and Sherbets.

Claims use since Apr. 27, 1917.

Ser. No. 135,894. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH H. LEE, Elmira Heights, N. Y. Filed Aug. 7, 1920.

Indian Medicine Man

Chief Black Cloud's Medicine

No claim being made to the word "Medicine" aside from the mark shown.

Particular description of goods.—Medicine for Coughs, Bronchitis, Consumption, Colds, and Diseases of the Throat and Lungs.

Claims use since about July 1, 1910.

Ser. No. 136,009. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) TURMAC TURKISH MACEDONIAN TOBACCO COMPANY, Arnhem, Netherlands. Filed Aug. 11, 1920.

Consists of a monogram formed by the letters "T U R M A C," partially surrounded by two circles of different radii, opening where the peripheries touch.

Particular description of goods.—Cigarette-Papers and Mouthpieces for Cigarettes and Cigars Not Made of Precious Metal.

Claims use since Apr. 29, 1920.

Ser. No. 136,108. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. M. & F. WALDO, New York, N. Y. Filed Aug. 13, 1920.

KOLOYDO

Particular description of goods.—A Pigment Having a Combination of Purposes.

Claims use since Apr. 25, 1920.

Ser. No. 136,189. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) DURYEA MANUFACTURING CO., Bayonne, N. J. Filed Aug. 17, 1920.

No registration rights being claimed for the words "Commercial," "Turpentine," and "Bayonne, N. J., U. S. A." apart from the mark shown in the drawing.

Particular description of goods.—Paints and Painters' Materials.

Claims use since Apr. 3, 1919.

Ser. No. 136,232. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) ERBOGRAPH COMPANY, New York, N. Y. Filed Aug. 18, 1920.

ERBOGRAPH

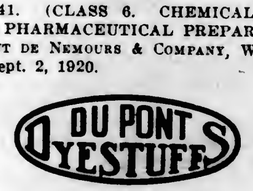
Particular description of goods.—Photographic Machinery—viz., Printers, Polishers, Film-Splicers, and Developing-Machines; Cameras, and Motion-Picture Films.

Claims use since May 15, 1915.

Ser. No. 136,393. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BECH, VAN SICLEN & CO. INC., San Francisco, Calif. Filed Aug. 24, 1920.

Particular description of goods.—Canned Fruits, Canned Vegetables, Canned Fish, Canned Milk, and Wheat-Flour.

Claims use since Mar. 1, 1920.



Ser. No. 136,616. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COLOMBIA ALKOLOID CO., Houston, Tex. Filed Aug. 30, 1920.

Particular description of goods.—Quinin.

Claims use since July 23, 1919.

Ser. No. 136,741. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. I. DU PONT DE NEMOURS & COMPANY, Wilmington, Del. Filed Sept. 2, 1920.

No claim is made to the registration of the word "Dyestuffs" as a registered trade-mark apart from the mark shown in the drawing.

Particular description of goods.—Dyestuffs.

Claims use since April, 1918.

Ser. No. 136,923. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDWIN M. THAYER, Boston, Mass. Filed Sept. 7, 1920.

PARANOL

Particular description of goods.—Anilin Dyes, a Coal-Tar Product in Powder Form.

Claims use since Jan. 11, 1900.

Ser. No. 136,954. (CLASS 39. CLOTHING.) H. K. REGAR & SONS, Bridgeport, Pa. Filed Sept. 8, 1920.

No claim being made to the words "Knit" and "Hosiery."

Particular description of goods.—Men's, Women's, and Infants' Hosiery.

Claims use since June 1, 1920.

Ser. No. 136,991. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) MIDGET NOVELTY CO. INC., New York, N. Y. Filed Sept. 9, 1920.

LITTLE
MARVEL

Particular description of goods.—Toy Carpet-Sweepers.

Claims use since about Aug. 20, 1920.

Ser. No. 136,992. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) MIDGET NOVELTY CO. INC., New York, N. Y. Filed Sept. 9, 1920.

The Midget

Particular description of goods.—Toy Carpet-Sweepers.

Claims use since about Aug. 20, 1920.

Ser. No. 137,116. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) GEORGE W. ENO RUBBER COMPANY, Los Angeles, Calif. Filed Sept. 13, 1920.

INSO

Particular description of goods.—Rubber-Coated-Fabric Inner Tires for Relining Pneumatic-Tire Casings.

Claims use since Aug. 1, 1920.

Ser. No. 137,117. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) GEORGE W. ENO RUBBER COMPANY, Los Angeles, Calif. Filed Sept. 13, 1920.

EXSO

Particular description of goods.—Retreads for Attachment to the Outer Surfaces of Worn Pneumatic-Tire Casings.

Claims use since Aug. 1, 1920.

Ser. No. 137,179. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) S. S. PIERCE CO., Boston Mass. Filed Sept. 14, 1920.

ELIM

Particular description of goods.—Preparation to Prevent Perspiration.

Claims use since the 1st day of September, 1920.

Ser. No. 137,346. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. M. & F. WALDO, New York, N. Y. Filed Sept. 18, 1920.

PIGMENT ACCELERATOR No. 23

The words "Pigment Accelerator" being disclaimed apart from the expression "No. 23" as shown.

Particular description of goods.—A Chemical Used in the Manufacture of Rubber.

Claims use since July 20, 1920.

Ser. No. 137,344. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. M. & F. WALDO, New York, N. Y. Filed Sept. 18, 1920.

SAPOFOR

Particular description of goods.—A Pigment Having a Combination of Purposes.

Claims use since July 20, 1920.

Ser. No. 137,442. (CLASS 39. CLOTHING.) AMERICAN LADY CORSET CO., Detroit, Mich. Filed Sept. 22, 1920.

Particular description of goods.—Corsets and Brassières.

Claims use since Sept. 1, 1919.

Ser. No. 137,505. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) UNITED STOCK REMEDIES CO., Atlanta, Ga. Filed Sept. 22, 1920.

Particular description of goods.—A Tonic for Hogs and Chickens.

Claims use since May 15, 1920.

Ser. No. 137,541. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PATTERSON-SARGENT COMPANY, Cleveland, Ohio. Filed Sept. 23, 1920.

NOBRAC

Particular description of goods.—Chemical Carbon-Removers.

Claims use since in or about December, 1896.

Ser. No. 137,597. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE S. S. WHITE DENTAL MANUFACTURING COMPANY, Philadelphia, Pa. Filed Sept. 24, 1920.

CORONA

Particular description of goods.—Fibrous Gold for Filling Teeth.
Claims use since about January, 1909.

Ser. No. 137,621. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) WALTER S. LORING, Plymouth, Mass. Filed Sept. 25, 1920.

KNIROL

Particular description of goods.—Parlor Game Played with a Board and Small Pieces or Men Movable Over Same.
Claims use since Sept. 21, 1920.

Ser. No. 137,818. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FERDINAND C. SCHUSSLER, Newark, N. J. Filed Oct. 1, 1920.

Particular description of goods.—A Liquid Preparation for Treating Gasolene, Kerosene, Benzol, Distillate, &c., for the Purpose of Producing More Power in Motors Using Above Fuels.
Claims use since Sept. 17, 1920.

Ser. No. 137,908. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) A. P. BABCOCK COMPANY, New York, N. Y. Filed Oct. 5, 1920.

Particular description of goods.—Talcum Powder, Face-Powder, Toilet Extract, Toilet Water, Rouge, Sachet, Bath-Salts, Tooth-Powder, and Perspiration-Powder.
Claims use since 1900.

Ser. No. 137,932. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EMMA MARGARET GEBHARDT, Los Angeles, Calif. Filed Oct. 5, 1920.

Particular description of goods.—Ointment for the Treatment of Piles.
Claims use since about July 15, 1920.

Ser. No. 138,024. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SOCIETE ANONYME PARFUMERIE SAVONNERIE GILOT, Paris, France. Filed Oct. 6, 1920.

BRISE D'ORIENT

Particular description of goods.—Perfumery, Facial Paints, Dentifrices, and Coloring-Tinctures.
Claims use since July 10, 1913.

Ser. No. 138,076. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) ALFRED T. HESPE, New York, N. Y. Filed Oct. 7, 1920.

HESCO

Consists of the word "Hesco."
Particular description of goods.—Thermometers, Hydrometers, and Hygrometers.
Claims use since June 1, 1920.

Ser. No. 138,170. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN M. KAPPUS, Cleveland, Ohio. Filed Oct. 11, 1920.

Particular description of goods.—Laxative Tablets.
Claims use since Aug. 15, 1920.

Ser. No. 138,259. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) RALPH B. MESSINGER, San Diego, Calif. Filed Oct. 13, 1920.

Particular description of goods.—Preparation Adapted to be Applied to Surfaces, Such as Show-Windows, Windshields, Spectacle-Lenses, &c., to Prevent the Deposit of Vapor or Moisture Thereon.
Claims use since July 1, 1920.

Particular description of goods.—Woolen and Cotton Piece Goods.
Claims use since Nov. 15, 1914.

141,779. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MILLBROOK WOOLEN MILLS, New York, N. Y. Filed Dec. 22, 1920. Serial No. 141,429.

ORKNEY ISLAND CHINCHILLA

Particular description of goods.—Woolen and Cotton Piece Goods.
Claims use since Jan. 9, 1912.

141,780. (CLASS 39. CLOTHING.) SOLOMON S. MILLER, Reading, Pa. Filed Nov. 27, 1920. Serial No. 140,338.

MILLER

Particular description of goods.—Ladies', Misses', and Children's Hosiery.
Claims use since July, 1913.

141,781. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MILLS & GIBB CORP., New York, N. Y. Filed Oct. 5, 1920. Serial No. 137,951.

Lyklinen

Particular description of goods.—Cotton Piece Goods.
Claims use since 1916.

141,782. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Dr. MILES MEDICAL COMPANY, Elkhart, Ind. Filed June 19, 1920. Serial No. 133,929.

NERVINE

Particular description of goods.—A Remedy for the Treatment of the Blood, Heart, Brain, and Nervous System.
Claims use since 1893.

141,783. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) MONARCH LEATHER COMPANY, Chicago, Ill. Filed Jan. 14, 1920. Serial No. 127,144.

YUCATAN

Particular description of goods.—Leather.
Claims use since 1914.

141,784. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) MORE-JONES BRASS & METAL COMPANY, St. Louis, Mo. Filed Jan. 31, 1921. Serial No. 142,983.

NICKEL

Particular description of goods.—Babbitt Metal.
Claims use since during the year 1885.

141,785. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) MORE-JONES BRASS & METAL COMPANY, St. Louis, Mo. Filed Jan. 31, 1921. Serial No. 142,984.

ARMATURE

Particular description of goods.—Babbitt Metal.
Claims use since 1900.

141,786. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) MORE-JONES BRASS & METAL COMPANY, St. Louis, Mo. Filed Jan. 31, 1921. Serial No. 142,986.

IMPROVED

Particular description of goods.—Babbitt Metal.
Claims use since 1900.

141,787. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) MORE-JONES BRASS & METAL COMPANY, St. Louis, Mo. Filed Jan. 31, 1921. Serial No. 142,987.

EXTRA

Particular description of goods.—Babbitt Metal.
Claims use since during the year 1900.

141,788. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NATIONAL TRADING COMPANY, Chicago, Ill. Filed Nov. 12, 1920. Serial No. 139,592.

THE VOGUE

Particular description of goods.—Hair-Nets.
Claims use since Nov. 1, 1918.

141,789. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) NEWARK VARNISH WORKS, Newark, N. J. Filed Sept. 26, 1918. Serial No. 113,430.

Particular description of goods.—Varnish.
Claims use since August, 1918.

141,790. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) NEWMAN TIRE & RUBBER CO. INC., New York, N. Y. Filed May 16, 1919. Serial No. 118,570.

Gold Medal

Particular description of goods.—Rubber Tires and Tubes.
Claims use since May 1, 1919.

141,791. (CLASS 15. OILS AND GREASES.) NEW YORK & NEW JERSEY LUBRICANT CO., New York, N. Y. Filed Dec. 6, 1920. Serial No. 140,669.

NON-FLUID OIL

Particular description of goods.—Lubricating Oils, Greases, and Compounds.
Claims use since 1896.

141,792. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) NICHTHAUSER & LEVY, Brooklyn, N. Y. Filed Feb. 24, 1920. Serial No. 128,853.

SIFTWELL

Particular description of goods.—Ash-Sifters.
Claims use since about Feb. 1, 1905.

141,793. (CLASS 39. CLOTHING.) NOTASEME HOSIERY COMPANY, Philadelphia, Pa. Filed Dec. 1, 1920. Serial No. 140,501.

NOTASEME

Particular description of goods.—Hosiery.
Claims use since about Oct. 1, 1907.

141,794. (CLASS 43. THREAD AND YARN.) F. A. PATRICK & CO., Duluth, Minn. Filed Jan. 5, 1921. Serial No. 141,881.

Patrick
DULUTH

Particular description of goods.—Embroidery Cotton, Silk, and Linen, Sewing-Silks, Knitting and Crotchet Yarn, Silk, Cotton, and Linen Thread.
Claims use since Apr. 2, 1910.

141,795. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE PEERLESS BREAD MACHINE COMPANY, Sidney, Ohio. Filed Aug. 16, 1920. Serial No. 136,165.

THE PEERLESS MFD. BY THE PEERLESS BREAD MACHINE CO.

Particular description of goods.—Flour-Milling and Bakers' Machinery, Specifically Flour-Sifters, Dough-Mixers, Loaf-Molders, Dough-Proofers, and Cake-Mixers.
Claims use since July 1, 1917.

141,796. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) A. C. PENN, INCORPORATED, Newark, N. J., and New York, N. Y., assignor to The Greist Manufacturing Company, a Corporation of Connecticut. Filed Nov. 30, 1920. Serial No. 140,470.

PENN

Particular description of goods.—Razors and Razor-Blades.
Claims use since Aug. 15, 1914.

141,797. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) A. C. PENN, INCORPORATED, Newark, N. J., and New York, N. Y., assignor to The Greist Manufacturing Company, a Corporation of Connecticut. Filed Nov. 30, 1920. Serial No. 140,471.

PENN
DOUBLE BEVEL BLADES

Particular description of goods.—Razor-blades.
Claims use since Oct. 15, 1918.

141,798. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) JOSIAH H. CROCKER, Cambridge, Mass. Filed Dec. 3, 1920. Serial No. 140,573.

WAX

Particular description of goods.—Stove-Polishes.
Claims use since Dec. 1, 1918.

141,799. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PRATT FOOD CO., Philadelphia, Pa. Filed Nov. 5, 1920. Serial No. 139,219.

Pratts

Particular description of goods.—Foods for Horses, Cattle, Hogs, Sheep, Dogs, and All Live Stock, Also Chickens, Ducks, Turkeys, Geese, Pigeons, and the like, Including the Following Preparations: Buttermilk Baby-Chick Food, Dog-Biscuits, Calf-Meal, Milk-Egg Mash, Buttermilk Growing-Mash.
Claims use since the year 1906.

141,800. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PRATT-LOW PRESERVING COMPANY, Santa Clara, Calif. Filed Jan. 5, 1921. Serial No. 141,871.

SANTA CLARA

Particular description of goods.—Canned Apricots, Pears, Peaches, Cherries, Plums, Grapes, Blackberries, Tomatoes, and Asparagus.
Claims use since June 28, 1909.

141,801. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PRATT-LOW PRESERVING COMPANY, Santa Clara, Calif. Filed Jan. 5, 1921. Serial No. 141,872.

LA GRANGE

Particular description of goods.—Canned Apricots, Pears, Peaches, Cherries, Plums, Grapes, Tomatoes, and Asparagus.
Claims use since about Nov. 2, 1908.

141,802. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) J. E. RHOADS & SONS, Philadelphia, Pa., and Wilmington, Del. Filed Jan. 31, 1921. Serial No. 143,014.

WATERSHED
RHOADS

Particular description of goods.—Flat Leather Belting.
Claims use since Oct. 2, 1907.

141,803. (CLASS 39. CLOTHING.) RICE-STIX DRY GOODS COMPANY, St. Louis, Mo. Filed May 25, 1917. Serial No. 104,083.

SIMPLEX

Particular description of goods.—Blouses, Flannel and Work Shirts, Men's and Boys' Overalls, Pants, Jackets, and One-Piece Working-Garments, and Women's One-Piece and Two-Piece Overalls.
Claims use since May 15, 1917.

141,804. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) RUSTLESS RULE CO. INC., Buffalo, N. Y. Filed Dec. 23, 1920. Serial No. 141,468.

THE "RUSTLESS" RULE

Particular description of goods.—Rules.
Claims use since about Nov. 1, 1911.

141,805. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MAURICE F. SCHLESINGER, New York, N. Y. Filed May 13, 1919. Serial No. 118,454.

SUCROL

Particular description of goods.—Aromatized Castor-Oil.
Claims use since Jan. 1, 1915.

141,806. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) THE SERVICE RECORDER COMPANY, Cleveland, Ohio. Filed Jan. 8, 1921. Serial No. 141,998.

THE SERVIS RECORDER

Particular description of goods.—Instruments for Recording the Periods of Operation and of Rest of Machinery and Vehicles.
Claims use since about June 1, 1912.

141,807. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) SIMMONS HARDWARE COMPANY, St. Louis, Mo. Filed Oct. 15, 1920. Serial No. 138,354.

SIMMONS

Particular description of goods.—Paint-Brushes, Varnish-Brushes, Scrub-Brushes, Whitewash-Brushes, Stucco-Brushes, Window-Brushes, Paper-Hangers' Brushes, Plasterers' Brushes, Calcimine-Brushes, Paste-Brushes, Glue-Brushes, Cotton Mops.
Claims use since Dec. 9, 1915.

141,808. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SKINNER MANUFACTURING COMPANY, Omaha, Nebr. Filed Dec. 7, 1920. Serial No. 140,754.

SKINNER'S

Particular description of goods.—Spaghetti, Cut Spaghetti, Macaroni, Cut Macaroni, Vermicelli, Twisted Vermicelli, and Egg-Noodles.
Claims use since 1911.

141,809. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SMITH, HOGG & CO., New York, N. Y. Filed Sept. 28, 1920. Serial No. 137,716.

CASCO

Particular description of goods.—Cotton Goods in the Piece.
Claims use since June 1, 1910.

141,810. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) THE STARR PIANO COMPANY, Richmond, Ind. Filed Jan. 29, 1921. Serial No. 142,942.

Starr

Particular description of goods.—Phonographs and Records for Phonographs.
Claims use since Jan. 1, 1907.

141,811. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ST. LOUIS INDEPENDENT PACKING COMPANY, St. Louis, Mo. Filed July 8, 1920. Serial No. 134,729.

JUNIATA

Particular description of goods.—Oleomargarin.
Claims use since Feb. 1, 1919.

141,812. (CLASS 39. CLOTHING.) TAUNTON RUBBER CO. INC., Taunton, Mass. Filed June 5, 1920. Serial No. 133,336.

COLUMBIA

Particular description of goods.—Rubber Heels.
Claims use since Jan. 20, 1920.

141,813. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) TAYLOR INSTRUMENT COMPANIES, Rochester, N. Y. Filed Jan. 10, 1921. Serial No. 142,051.

Taylor

Particular description of goods. — Thermometers, Barometers, Compasses, Hydrometers, Hygrometers, Anemometers, and Urinalysis Instruments.
Claims use since February, 1912.

141,814. (CLASS 2. RECEPTACLES.) E. C. TECKTONIUS MANUFACTURING COMPANY, Racine, Wis. Filed Sept. 30, 1920. Serial No. 137,792.

TECKTONIUS

E.C. TECKTONIUS MANUFACTURING CO. ECTMCo RACINE, WIS., U.S.A.

Silo.

Particular description of goods.—Silos.
Claims use since about June 11, 1915.

141,815. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM TOLAND, Greenville, S. C. Filed Oct. 9, 1920. Serial No. 138,149.

Toland's King of Smallpox

Particular description of goods.—A Medicine Used in the Treatment of Smallpox.
Claims use since Feb. 24, 1914.

141,816. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) WARWICK NOVELTIES INC., Pawtucket, R. I. Filed Jan. 26, 1921. Serial No. 142,820.

WARWICK

Particular description of goods.—Jewelry for Personal Adornment—Namely, Collar-Pins and Scarf-Pins Which are Made of or Plated with Precious Metal.
Claims use since November, 1919.

141,817. (CLASS 39. CLOTHING.) WEINGARTEN BROS., Inc., New York, N. Y. Filed Nov. 27, 1920. Serial No. 140,362.

Registered December 16, 1919. Canceled March 2, 1921.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE HACKETT, SMITH, AND SOUTHALL.

Decided April 25, 1921.

1. PATENTS—EXTENSION OF RIGHTS OF PRIORITY—NOLAN ACT CONSTRUED.
The rights of priority provided by section 1 of the act of March 3, 1921, will be extended up to the extreme limits set therein in favor of citizens of the United States and citizens or subjects of foreign countries which extend rights of priority to the limits set in the Berne Convention or to the limits set by Great Britain in ratifying that Convention.

2. SAME—EXTENSIONS OF TIME FOR PAYING FEES—NOLAN ACT CONSTRUED.
Since under section 2 of the act of March 3, 1921, no extensions may confer privileges on the citizens or subjects of a foreign country for a longer term than the term during which such privileges are conferred by such foreign country on the citizens of the United States, fees past due must be paid or actions required to be done in the past must be performed at such time, on or before March 3, 1922, that the period between the due date and the date when such fee is actually paid or action is actually taken is not longer than the maximum period allowed by the laws of such foreign country to citizens of the United States for similar actions.

3. SAME—NOLAN ACT—PROOF OF FOREIGN LAW—PROOF NOT NECESSARY IN EACH APPLICATION.
For purposes of administration of the Nolan Act, (act of March 3, 1921,) as it applies to foreign applicants, the privileges conferred on citizens of the United States by the laws of a foreign country may be proved by the affidavit of an expert in such law or by a statement from the competent authorities of that country. When the law is once proved, it will be sufficient for all applications filed by citizens or subjects of that country.

4. SAME—SAME—PROOF OF BRITISH LAWS AND PRACTICE INSUFFICIENT.
Proof of the laws and practice of Great Britain alleged to meet the conditions of the Nolan Act as to reciprocity examined and found insufficient.

ON PETITION.

Mr. H. R. Kerslake for the applicants.

ROBERTSON, *Commissioner:*

This case is before me on a petition from the Examiner's action refusing to allow the application because it was patented in Great Britain on an application filed more than a year prior to the filing of the application in this country.

Relief from the bar of applicant's British patent must be found, if at all, in section 1 of the act of March 3, 1921.

As pointed out in the case of *ex parte Rechnitzner*, (285 O. G., 572,) the benefits of the act of March 3, 1921, are to be accorded to citizens or subjects of foreign countries which grant substantially reciprocal privileges to citizens of the United States. The benefits of the act thus being made conditional, it is necessary to inquire whether the conditions are fulfilled by the British laws and practice. The petitioner has offered proof tending to establish this fact. Before discussing the sufficiency of the proof it is important to determine to what point or points the proof must extend.

Section 1 of the act provides—

that the rights of priority provided by section 4887 of the Revised Statutes, for the filing of applications for patent for inventions and designs, which rights had not expired on the 1st day of August, 1914, or which rights have arisen since the 1st day of August, 1914, shall be, and the same are hereby, extended until the expiration of a period of six months from the passage of this act in favor of the citizens of the United States or citizens or subjects of all countries which have extended, or which now extend, or which within said period of six months shall extend substantially reciprocal privileges to citizens of the United States, and such extension shall apply to applications upon which patents have been granted, as well as to applications now pending or filed within the period herein. * * *

This section extends the rights of priority provided by section 4887 of the Revised Statutes from one year in the case of patents for inventions and four months in the case of designs, which rights had not expired on August 1, 1914, or have arisen since that date, until September 3, 1921, conditional upon the existence of substantially reciprocal privileges. The privilege contemplated by this section is the privilege of filing within the extended time limits without losing the benefits of priority based upon the first filed application. Upon the information now at hand I am of the opinion that a substantially reciprocal privilege would be found in a foreign law which extended these rights of priority from the date fixed by this section up to the limits set in the Berne Convention or up to the limits set by the reservation made by Great Britain in ratifying that Convention. Hence, unless and until further important information comes to hand, I am prepared to extend the provisions of this section to the extreme limits of time set forth therein upon proof that a foreign law extends rights of priority to the limits stated above.

Section 2 of the act provides—

that the time now fixed by law for the payment of any fee or for the taking of any action with respect to an appli-

cation for patent, which time had not expired on August 1, 1914, or which commenced after August 1, 1914, is hereby extended until the expiration of one year from the passage of this act, without the payment of extension fees or other penalty in favor of the citizens or subjects of countries which have extended, now extend, or shall extend during a period of one year from the passage of this act substantially reciprocal privileges to citizens of the United States, provided that no extension herein shall confer such privileges on the citizens or subjects of a foreign country for a longer term than the term during which such privileges are conferred by such foreign country on the citizens of the United States, but nothing in this act shall give any right to reopen interference proceedings where final hearing before the Examiner of Interferences has taken place.

This section applies only to pending applications and contemplates, for the most part, the payment of final fees, the taking of appeals, the renewal of forfeited applications, and the revival of abandoned cases. As to this section a different rule must be adopted from that indicated above in the discussion of section 1, since the proviso clause restricts the extension which may be granted, so that no extension of time may be permitted for a longer term than is permitted by the foreign laws for similar actions. Under this section it will be permissible for a citizen or subject of a foreign country on or before March 3, 1922, to pay any fee or take any action, which fee should have been paid or which action should have been taken on or since August 1, 1914, provided the fee is paid or the action taken on such date that the period between the due date and the date when such fee was actually paid or the required action was actually taken (see *ex parte Rechnitzner, supra*) is not greater than the maximum period of extension afforded by the foreign law, provided the condition as to substantially reciprocal privileges present in this section, as well as in section 1, is satisfied. By this section it was intended to save all rights in foreign applications which otherwise would have been lost by failure to act at the time fixed by law. Since no taxes are due on patents under the American law, nor is working required, nor any other act necessary to be done to keep them in full force for the term for which they were granted, and since the provisions of section 2 provide for all pending applications, so that they may now go to allowance and patent, it will be seen that the law furnishes complete relief from disabilities arising out of the war. It is further observed that the law does not require any showing whatever that failure to file an application or failure to pay a fee or take an action was due to causes arising out of the war.

The proofs offered by petitioner that Great Britain grants to citizens of the United States substantially reciprocal privileges consist of a copy of the Patents, Designs, and Trade-Marks (Temporary) Rules of 1914 and a copy of a notice relative to the International Convention signed at Berne on June 30, 1920, together with an affidavit of the manager of the Washington office of a British firm of patent agents.

Petitioner calls attention to Rule 3 of the temporary rules, 1914, which reads as follows:

3. The comptroller may also at any time during the continuance of these rules extend the time prescribed by the Patents and Designs Act, 1907, or the Trade Marks Act, 1905, or any rules made thereunder, for doing any act or filing any document, upon such terms and subject to such conditions as he may think fit in the following cases, namely:—

(a) Where it is shown to his satisfaction that the applicant, patentee, or proprietor, as the case may be, was prevented from doing the said act, or filing the said document, by reason of active service or enforced absence from this country, or any other circumstances arising from the present state of war, which, in the opinion of the comptroller, would justify such extension:

(b) Where the doing of any act would, by reason of the circumstances arising from the present state of war, be prejudicial or injurious to the rights or interests of any applicant, patentee or proprietor as aforesaid.

There is nothing in this rule relating to an extension of the rights of priority. It may be that other provisions of the British law might be found after search, which, taken with Rule 3, would appear to warrant the extension of such priority rights; but my conclusion upon such matter might be quite contrary to some existing administrative or judicial ruling by the competent British authorities. Besides, these rules apparently do not themselves extend the time, but only provide that the comptroller may do so, and no evidence has been submitted, except as hereinafter indicated, to show to what extent the comptroller has acted in this regard. A search through foreign laws in order to arrive at a conclusion upon the existence of reciprocity is believed to be too uncertain to be relied upon entirely, if a better method can be found.

Furthermore, paragraph (a) of the rule in question seems to restrict the relief provided therein to cases in which the act required by the law could not have been performed because of circumstances arising out of the war, which is not required under the American act, as above pointed out. Under such a provision it would be desirable to know how it had been applied to applications filed by citizens of the United States.

The notice relative to the International Convention of Berne apparently merely directs attention to an act providing for an extension of the temporary rules, so far as it relates to an extension of time, until the 10th day of January, 1921, and since the rule or practice which it is designed to modify is not itself clear, as above pointed out, it is of no assistance.

The affidavit tabulates four applications filed by citizens of the United States in Great Britain more than a year after the filing of the application in the United States, upon two of which, it is averred, British patents have been granted after the granting of the patent in this country, and it is averred that other instances might be given. The facts stated are of some evidential value as to the reciprocal provisions of the British law and practice, but do not constitute satisfactory proof. These two patents may have been granted upon a showing that it was impossible to file the applications on an earlier date, or they may have even been granted by mistake or oversight.

It should not be inferred from the objections made above to the sufficiency of proof that this Office will assume an illiberal attitude as to what are reciprocal privileges or as to the proof thereof; but in view of the fact that the grant of a United

States patent raises a *prima facie* presumption that all prerequisites of the law have been complied with and as the condition of reciprocity is regarded as a prerequisite to the grant better proof should be offered than is presented in this petition.

In order that proof of the laws of a country by one applicant may serve for all other applications filed by the citizens or subjects of that country, of which notice will be given in the OFFICIAL GAZETTE, thereby relieving applicants of unnecessary burdens, it is desirable that in submitting proof of the reciprocal provisions of any foreign law all essential matters be dealt with—the character of defaults which are relieved and the extreme periods of time over which defaults will be relieved—so that an applicant will not prove the law in so far only as it fits his case, leaving it to another applicant to prove so much more as is necessary to bring his case within its provisions. For this reason I have set out above what, at this time, appears to be the proper construction of the law, the things to which it applies, the character of the defaults which are relieved, and the time limits over which it is operative. To summarize in this respect:

(1) Section 1 of the American act extends the rights of priority, which rights had not expired on August 1, 1914, or which have arisen since August 1, 1914, until September 3, 1921.

(2) Section 2 permits a citizen of a foreign country at any time prior to March 3, 1922, to pay any fee or take any action due on or since August 1, 1914, provided the period between the due date and the date when the fee is actually paid or the date when the required action is actually performed is not greater than the maximum period which has been allowed or is now allowed by the foreign country for similar action.

(3) Patents which have been granted run throughout the term of grant, since there is no provision in the American laws whereby they lapse or become abandoned for failure to pay taxes, to work, or for any other reason.

To further emphasize and epitomize the provisions of the American act of March 3, 1921, it may be stated that it is my opinion that no patent heretofore granted is invalid or will become invalid by failure to take any action, since under the American law no action of any kind is necessary to keep the patent in full force, and that the act under discussion makes provision to remedy any default with respect to pending applications of foreign citizens or subjects occurring since the beginning of the war, dependent upon the existence of reciprocity by such foreign country.

Proof of a foreign law may be made by the affidavit of one qualified to know the patent laws of that country. His qualifications may be shown by averments as to his familiarity with the foreign law, by practice before the foreign courts, by practice before the foreign patent office, by study of the law, and by teaching the law. Preferably, in an affidavit intended to prove a foreign law, affiant should quote the law relating to the extension of rights of priority and the law dealing with the revival of lapsed patents or applications or furnish copies of such laws and point out the applicable sections thereof, and he should state what the practice has been and now is with respect to preserving the rights of citizens of the United States along the lines stated above in discussing the provisions of the American act, and the extreme limits of the extensions granted should be specified. Of course it is not expected that every detail of a foreign law will be treated; but what is desired is accurate information with regard to the outstanding features which it is understood were intended to be taken care of by the peace treaty of Versailles, particularly by articles 307 and 308—*i. e.*, the revival of patents lapsed because of failure to pay taxes or to work or for other reasons and extensions of time in connection with applications for patent whereby the inventions were or are protected from defaults arising since the beginning of the war.

It scarcely need be said that a statement by the competent authorities of a foreign Government upon the points indicated would be considered as highly satisfactory in lieu of the testimony of an expert.

The only point decided herein is that the petition does not furnish sufficient proof of the laws of Great Britain to warrant the relief prayed for. This opinion goes far beyond this, as it seemed necessary to do, in order to enable persons whose interests are involved to make any headway in the protection thereof and in order also to enable this Office to administer the law with promptness and without undue friction. The danger is recognized of placing an interpretation on the law before all its phases have been revealed and fully discussed by clashing interests, and hence the views above expressed are not to be taken as absolutely binding, but may be modified in the light of further information. For the present, however, they will furnish a guide to the proceedings in this Office.

The petition is denied.

[Copies of this decision, together with the law on the succeeding page, may be obtained for five cents each by addressing the "Commissioner of Patents, Washington, D. C."]

EXTENSION OF TIME FOR FILING APPLICATIONS FOR LETTERS PATENT, FOR TAKING ACTIONS WITH RESPECT THERETO, FOR THE REVIVING AND REINSTATEMENT OF APPLICATIONS, AND FOR OTHER PURPOSES.

[H. R. 15662.]

An act to extend temporarily the time for filing applications for Letters Patent, for taking actions in the United States Patent Office with respect thereto, for the reviving and reinstatement of applications for Letters Patent, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the rights of priority provided by section 4887 of the Revised Statutes, for the filing of applications for patent for inventions and designs, which rights had not expired on the 1st day of August, 1914, or which rights have arisen since the 1st day of August, 1914, shall be, and the same are hereby, extended until the expiration of a period of six months from the passage of this act in favor of the citizens of the United States or citizens or subjects of all countries which have extended, or which now extend, or which within said period of six months shall extend substantially reciprocal privileges to citizens of the United States, and such extension shall apply to applications upon which patents have been granted, as well as to applications now pending or filed within the period herein: *Provided*, That such extension shall in no way furnish a basis of claim against the Government of the United States: *Provided further*, That such extension shall in no way affect the right of any citizen of the United States, who, before the passage of this act, was *bona fide* in possession of any rights in patents or applications for patent conflicting with rights in patents granted or validated by reason of such extension, to exercise such rights by itself or himself personally, or by such agents, or licensees, as derived their rights from it, or him, before the passage of this act, and such persons shall not be amenable to any action for infringement of any patent granted or validated by reason of such extension.

A patent shall not be refused on an application coming within the provisions of this act, nor shall a patent granted on such application be held invalid by reason of the invention having been patented or described in any printed publication or in public use or on sale in the United States prior to the filing of the application, unless such patent or publication or such public use or sale was prior to the filing of the foreign application upon which the right of priority is based.

SEC. 2. That the time now fixed by law for the payment of any fee or for the taking of any action with respect to an application for patent, which time had not expired on August 1, 1914, or which commenced after August 1, 1914, is hereby extended until the expiration of one year from the passage of this act, without the payment of extension fees or other penalty in favor of the citizens or subjects of countries which have extended, now extend, or shall extend during a period of one year from the passage of this act substantially reciprocal privileges to citizens of the United States, provided that no extension herein shall confer such privileges on the citizens or subjects of a foreign country for a longer term than the term during which such privileges are conferred by such foreign country on the citizens of the United States, but nothing in this act shall give any right to reopen interference proceedings where final hearing before the Examiner of Interferences has taken place.

SEC. 3. That no patent granted or validated by reason of the extensions provided for in sections 1 and 2 of this act shall abridge or otherwise affect the right of any citizen of the United States, or his agent or agents, or his successor in business, to continue any manufacture, use, or sale commenced before the passage of this act by such citizen, nor shall the continued manufacture, use, or sale by such citizen, or the use or sale of the devices resulting from such manufacture or use constitute an infringement.

SEC. 4. That all applications for patent filed since August 1, 1914, and prior to June 15, 1920, which were executed by an agent of the applicant, and in which a petition, specification, and oath, signed by the inventor, or his executor or administrator, had been filed or shall have been filed within a period of one year from the passage of this act, and the patents granted on such applications, shall have the same force and effect as if the papers signed by the inventor, or his executor or administrator, had been filed on the date on which the papers signed by the agent were filed.

SEC. 5. That all applications for patent filed since August 1, 1914, in which the oath was executed before or authenticated by a consular officer, or other representative qualified to administer oaths, of a Government acting in the interests of the Government of the United States, shall have the same force and effect as if said oath had been executed by the applicant before a consular officer of the United States.

SEC. 6. That where an invention was made by a person while serving abroad, during the war, with the forces of the United States, civil or military, the inventor thereof shall be entitled, in interference and other proceedings arising in connection with such invention, to the same rights of priority with respect of such invention as if the same had been made in the United States, and where an application became abandoned or forfeited, during the time the applicant was serving with the forces of the United States, by reason of his failure to take action or pay a fee within the time now required by law, such action may be taken, or the fee paid, within six months from the passage of this act.

SEC. 7. That no claim shall be made or action brought in respect of the use since August 1, 1914, up to the passsage of this act, by the Government of the United States, or by any persons acting on behalf of, or under contract with, or with the assent of the Government of the United States or of Governments or their representatives associated with the United States, under any patent rights owned in whole or in part since August 1, 1914, by an alien enemy, nor in respect of the use of any process during such period, or the sale, offering for sale, or use, at any time, of any products, articles, or apparatus whatsoever manufactured during such period to which such patent rights applied.

SEC. 8. That nothing in this act shall affect any act done by virtue of the special measures taken during the war under legislative, executive, or administrative authority of the United States in regard to the rights of an enemy, or ally of an enemy, as defined by the Trading with the Enemy Act of October 6, 1917, in patents for inventions and designs.

Approved, March 3, 1921.

Ashcroft Manufacturing Company, The. (See Crocker, Ernest B., assignor.)
Ashland Products Company, The. (See Willour, Le Roy, assignor.)
Ashlund, Erik A., Waukegan, Ill. Overshoe-applicator. No. 1,374,544; Apr. 12; v. 285; p. 266.
Ashtabula Bow Socket Company, The. (See Allen, Charles R., assignor.)
Ashworth, Asa, Salamanca, N. Y. Apparatus for dyeing tops, yarn, &c. No. 1,374,543; Apr. 12; v. 285; p. 266.
Ashworth, Asa, Salamanca, N. Y. Apparatus for dyeing tops, yarn, &c. No. 1,374,628; Apr. 12; v. 285; p. 283.
Asquith, Stead A., Waterloo, Iowa. Air-hose support. No. 1,374,803; Apr. 12; v. 285; p. 316.
Associated Engineering and Supply Company. (See Down, Sidney G., assignor.)
Ast, Fritz L., Los Angeles, Calif. Flatiron. No. 1,376,242; Apr. 26; v. 285; p. 686.
Atkins, Charles, Cincinnati, Ohio, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Method of and means for assembling core laminations. No. 1,375,072; Apr. 19; v. 285; p. 431.
Atlantic Refining Company. (See Johansen, Ernest M., assignor.)
Atlas Powder Company. (See Carlsson, O., and Thall, assignors.)
Atwater Kent Manufacturing Works. (See Aiken, Frank, assignor.)
Auert, Nicholas A., assignor to C. H. Lehbank, Longmont, Colo. Safety-lamp. No. 1,376,243; Apr. 26; v. 285; p. 686.

Auger, Joseph T., Minneapolis, assignor of three-eighths to E. M. Ferguson, St. Paul, and three-eighths to E. Du Lac, Minneapolis, Minn. Lubricating and packing device for shafts. No. 1,374,895; Apr. 19; v. 285; p. 397.
Austin, Bascum O., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control system and apparatus. No. 1,374,545; Apr. 12; v. 285; p. 267.
Austin, Henry S., Philadelphia, Pa. Hot-air generator. No. 1,375,664; Apr. 26; v. 285; p. 577.
Automatic Electric Company. (See Erickson, John, assignor.)
Automatic Electric Company. (See Martin, Talbot G., assignor.)
Automatic Gun Control Company. (See Farrell, Stephen A., assignor.)
Autosales Corporation. (See Grover, Albert D., assignor.)
Averill, Earl A., Mount Vernon, assignor to Locomotive Feed Water Heater Company, New York, N. Y. Fluid-pressure-delivery mechanism for locomotive-feed-water-heater systems. No. 1,376,064; Apr. 26; v. 285; p. 653.
Averill, Willard C., Jr., Houston, Tex. Distilling hydrocarbons. No. 1,375,245; Apr. 19; v. 285; p. 464.
Avery, William C., Honolulu, Hawaii. Paper-feeding apparatus for typewriters. No. 1,373,700; Apr. 5; v. 285; p. 62.
Ayres, Clinton L. (See McNeely, Carl, assignor.)
Ayres, Elwood B., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Drier. No. 1,376,244; Apr. 26; v. 285; p. 687.
Babcock, Leland A., assignor to Sprague Canning Machinery Company, Chicago, Ill. Cutting device for fruit-disintegrating machines. No. 1,373,398; Apr. 5; v. 285; p. 3.
Babcock & Wilcox Company, The. (See Sneddon, James P., assignor.)
Babel, Henry C., Buffalo, N. Y. Wheel-rim. No. 1,374,272; Apr. 12; v. 285; p. 214.
Backhaus, Arthur A., Baltimore, Md., assignor to U. S. Industrial Alcohol Co. Producing catalyzers. No. 1,375,345; Apr. 19; v. 285; p. 483.
Bacon Bros. Company, The. (See Gillian, Herman A., assignor.)
Bacon, Raymond F., and H. S. Davis, Pittsburgh, Pa., assignors to Texas Gulf Sulphur Company, Bay City, Tex. Treatment of mined sulfur. No. 1,374,897; Apr. 19; v. 285; p. 397.
Bacon, Raymond F., and H. S. Davis, Pittsburgh, Pa., assignors to Texas Gulf Sulphur Company, Bay City, Tex. Treatment of mined sulfur. No. 1,374,898; Apr. 19; v. 285; p. 397.
Badeker, John, assignor to Chicago Standard Metallic Packing Company, Omaha, Nebr. Metallic rod-packing. No. 1,376,131; Apr. 26; v. 285; p. 666.
Badenhausen, John P., Philadelphia, Pa. Boiler. No. 1,374,484; Apr. 12; v. 285; p. 255.
Badgley, Charles A. (See Jones, Llewellyn R., assignor.)
Baer, Edward G., assignor to The Will-Burt Company, Orrville, Ohio. Bracket. No. 1,375,888; Apr. 26; v. 285; p. 619.
Bailey, Edwin W. M., Amesbury, Mass. Window-glass channel. No. 1,374,629; Apr. 12; v. 285; p. 283.
Bailey, Ervin G., Newton Highlands, Mass., assignor to Bailey Meter Company. Pressure-relation gage. (Reissue.) No. 15,079; Apr. 12; v. 285; p. 334.
Bailey, Ervin G., Newton Highlands, Mass., assignor to Bailey Meter Company. Obtaining a ready comparison of factors in a power producing or using apparatus. (Reissue.) No. 15,080; Apr. 12; v. 285; p. 334.
Bailey, George B., Linton, Ind. Electric train-stop. No. 1,376,245; Apr. 26; v. 285; p. 687.
Bailey Meter Company. (See Bailey, Ervin G., assignor.) (Reissue.)
Bailey, Theodorus S., Berkeley, Calif. Vessel-filling apparatus. No. 1,373,935; Apr. 5; v. 285; p. 100.
Bally, Thaddeus F., and P. T. Cope, assignors to The Electric Furnace Company, Alliance, Ohio. Melting-furnace. No. 1,373,787; Apr. 5; v. 285; p. 78.
Baird, Benjamin F., Hollidaysburg, Pa. Tool. No. 1,375,547; Apr. 19; v. 285; p. 522.
Baird, Dudley, Berkeley, Calif., assignor to General Chemical Company, New York, N. Y. Metallurgical furnace. No. 1,375,346; Apr. 19; v. 285; p. 483.
Baker & Company. (See Van Allen, George L., assignor.)
Baker, David B., Hoquiam, Wash. Auto-jack and power plant. No. 1,373,585; Apr. 5; v. 285; p. 40.
Baker, Franklin, Jr., Philadelphia, Pa. Removing cocoa-nut-shells. No. 1,374,899; Apr. 19; v. 285; p. 397.
Baker, Hartley O., assignor to The Baker Steam Motor Car and Manufacturing Co., Inc., Pueblo, Colo. Steam-condensing apparatus. No. 1,375,272; Apr. 19; v. 285; p. 469.
Baker, Henry F. (See Smith, Harold J., assignor.)
Baker, Newton D., Secretary of War, trustee. (See Peoples, John S., assignor.)
Baker, Newton D., Secretary of War, trustee. (See Swan, John H., assignor.)
Baker Steam Motor Car and Manufacturing Co., The. (See Baker, Hartley O., assignor.)
Baker, William E., assignor to Wonder Trap Co., Inc., Waco, Tex. Wire fabric. No. 1,375,810; Apr. 26; v. 285; p. 603.
Bakovitch, Joseph, Herminie, Pa. Rail-joint and fastener therefor. No. 1,374,804; Apr. 12; v. 285; p. 317.

Derr, Charles E., assignor to Packard Motor Car Company, Detroit, Mich. Machine for cutting teeth. No. 1,374,064; Apr. 5; v. 285; p. 133.

Des Moineaux, Alfred V., Denver, Colo. Milk-bottle carrier. No. 1,375,783; Apr. 26; v. 285; p. 598.

Desobry, Charles W., Indianapolis, Ind. Apparatus for heating and cooling liquids. No. 1,373,953; Apr. 5; v. 285; p. 112.

Detachable Plow Share Edge Manufacturing Company. (See Nordquist, Peter A., assignor.)

Detwiler, Frank J., and M. H. Burkholder, Parkersburg, W. Va. Picture-projector. No. 1,373,491; Apr. 5; v. 285; p. 22.

Dial, James B. F., *et al.* (See Cook, George R., assignor.)

Diana, Alexander, San Francisco, Calif. Wheel-protector. No. 1,374,065; Apr. 5; v. 285; p. 133.

Dick, Samuel M., assignor to International Dry Milk Company, Minneapolis, Minn. Dehydrated milk and producing the same. No. 1,374,555; Apr. 12; v. 285; p. 269.

Dickerson, George W., assignor to The North Electric Manufacturing Company, Galion, Ohio. Telephone-switch. No. 1,374,366; Apr. 12; v. 285; p. 232.

Dicks, Henry, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Electric heater. No. 1,374,639; Apr. 12; v. 285; p. 285.

Diehl, Otto J., *et al.* (See Wrozina, Ignatius, assignor.)

Diener, Frank A. (See Schylander, John F., assignor.)

Dillon, Charles. (See Peets, Clifford S., assignor.)

Dillon, Nelson D., Seattle, Wash. Game. No. 1,373,998; Apr. 5; v. 285; p. 121.

Dimitri, Georges L., and Jules E. Delaunay, Paris, France. Manufacture of refractory and insulating products. No. 1,374,493; Apr. 12; v. 285; p. 257.

Dixon, Amos F., Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Selective system. No. 1,374,192; Apr. 12; v. 285; p. 198.

Dobrowolski, Alfons, Racine, Wis. Auxiliary seat for tricycles. No. 1,374,911; Apr. 19; v. 285; p. 399.

Dock, Herman, Pleasantville, assignor to L. O. Bucklin, trustee, Little Falls, N. Y. Internal-combustion engine. No. 1,374,140; Apr. 5; v. 285; p. 147.

Dodd, Alvin H., Chicago, Ill. Audible signal. No. 1,374,367; Apr. 12; v. 285; p. 232.

Dodd, Henry S., assignor of one-half to J. O'Neill, Toronto, Ontario, Canada. Heater. No. 1,375,137; Apr. 19; v. 285; p. 443.

Dodds, Ethan I., assignor to Flannery Bolt Company, Pittsburgh, Pa. Welding. No. 1,374,640; Apr. 12; v. 285; p. 286.

Dodds, Redus D., Houston, Tex. Sample-taking device. No. 1,373,492; Apr. 5; v. 285; p. 22.

Dodds, Rowan T. F., Stratford, Ontario, Canada. Preventing explosions. No. 1,376,082; Apr. 26; v. 285; p. 656.

Dodson, George W., Automobile-fender. No. 1,375,574; Apr. 19; v. 285; p. 527.

Doellinger, Louis F., Waterloo, Iowa. Wringer attachment. No. 1,375,784; Apr. 26; v. 285; p. 598.

Doering, George, St. Louis, Mo. High-arch-repair last. No. 1,375,282; Apr. 19; v. 285; p. 471.

Doherty, John, New York, assignor to M. I. Kopple, Far Rockaway, N. Y. Variable-speed device. No. 1,374,439; Apr. 12; v. 285; p. 246.

Domestic Utility Corporation, The. (See Warren, Frank D., assignor.)

Donaldson, Lillian D., New Washington, Ohio. Stock-feeder. No. 1,373,602; Apr. 5; v. 285; p. 43.

Donle, Harold P., assignor to The Connecticut Telephone & Electric Co., Inc., Meriden, Conn. Vacuum-tube base. No. 1,374,832; Apr. 12; v. 285; p. 322.

Donnelly, George F. (See Curran, L. J., and Donnelly.)

Dooley, William D., assignor, by mesne assignments, to L. D. Bowser, Dallas, Tex. Electrically-controlled puller for oil-well casings. No. 1,374,838; Apr. 12; v. 285; p. 322.

Dooley, William D., assignor, by mesne assignments, to L. D. Bowser, Dallas, Tex. Magnetically-operated oil-well fishing-tool. No. 1,374,834; Apr. 12; v. 285; p. 322.

Dornan, James. (See Portham, R. S., and Dornan.)

Dorsey, Henry A., Enterprise, Ala. Stump-pulling and skidder attachment for tractors. No. 1,374,835; Apr. 12; v. 285; p. 322.

D'Orville, Theodore L. R., Sewickley, assignor to Standard Steel Spring Company, Coraopolis, Pa. Machine for making leaf-springs. No. 1,375,038; Apr. 19; v. 285; p. 425.

Dottl, Joseph, and H. G. Hart, Madison, Wis. Support. No. 1,373,716; Apr. 5; v. 285; p. 65.

Dougan, Kennedy, Minneapolis, Minn. Heavy artillery. No. 1,375,491; Apr. 19; v. 285; p. 511.

Douglas, Beverly, Baltimore, Md. Device for supplying heated vapor to internal-combustion engines. No. 1,373,603; Apr. 5; v. 285; p. 43.

Douglas, Louis M. (See Parsons, C. A., Stanley, and Douglas.)

Dover, Oscar A., Gastonia, N. C. Lubricating means for spinning-rings. No. 1,375,833; Apr. 26; v. 285; p. 608.

Dow Chemical Company, The. (See Veazey, William R., assignor.)

Down, Sidney G., Berkeley, assignor to Associated Engineering and Supply Company, San Francisco, Calif. Liquid-fuel-control system. No. 1,375,492; Apr. 19; v. 285; p. 511.

Downey, Millard J., Chicago, Ill. Attachment for billing-machines. No. 1,373,870; Apr. 5; v. 285; p. 96.

Downie, James H., San Antonio, Tex. Truss. No. 1,375,448; Apr. 19; v. 285; p. 503.

Downing, Ira S., Indianapolis, Ind., assignor to Camel Company. Car-door. No. 1,374,494; Apr. 12; v. 285; p. 257.

Downs, Charles R. (See Weiss, J. M., and Downs.)

Downs, Charles R., Cliffside, N. J., assignor to The Barrett Company. Producing maleic acid. No. 1,374,720; Apr. 12; v. 285; p. 301.

Downs, Charles R., Cliffside, N. J., assignor to The Barrett Company. Producing anthraquinone. No. 1,374,721; Apr. 12; v. 285; p. 301.

Downs, Charles R., Cliffside, N. Y., assignor to The Barrett Company. Catalytic oxidation of naphthalene. No. 1,374,722; Apr. 12; v. 285; p. 301.

Doyle, Carrie, *et al.* (See Hale, R. J., and Doyle, assignors.)

Doyle, Charles, San Francisco, Calif. Dentifrice-dispensing device. No. 1,375,954; Apr. 26; v. 285; p. 631.

Doyle, James S. (See Hedley, F., and Doyle, assignor.)

Doyle, William T. (See Hale, R. J., and Doyle.)

Drake, A. W., Manufacturing Co. (See Gomber, George W., assignor.)

Drake, Le Roy, Chicago, Ill. Fuse-wire reel. No. 1,374,368; Apr. 12; v. 285; p. 232.

Drange, Carl E., Plainfield, N. J., assignor to I. Scott and D. J. Scott, executors of the estate of Walter Scott, deceased. Means for attaching printing-plates to cylinders. No. 1,373,656; Apr. 5; v. 285; p. 53.

Draper Corporation. (See Rhoades, Alonzo E., assignor.)

Draper, Thomas B., Oakland, Calif. Combination table and bed. No. 1,375,449; Apr. 19; v. 285; p. 503.

Dratschke, Hans, Brooklyn, N. Y. Game apparatus. No. 1,374,091; Apr. 19; v. 285; p. 414.

Drechsel, Emil A., assignor to Firm of Albin Drechsel Sohne, Gornsdorf, Germany. Framework knitted fabric. No. 1,375,575; Apr. 19; v. 285; p. 527.

Drew, Harold L., Trinidad, Colo. Medicine-cabinet. No. 1,375,901; Apr. 26; v. 285; p. 621.

Drew, William F., San Francisco, Calif. Selective roller filing-cabinet. No. 1,375,493; Apr. 19; v. 285; p. 511.

Driggers, Henry A. (See Gilbert, John H., assignor.)

Drill, Charles, St. Louis, Mo. Internal-combustion engine. No. 1,375,902; Apr. 26; v. 285; p. 621.

Drowns, Irvin, assignor to The Timken Roller Bearing Company, Canton, Ohio. Tool-holder. No. 1,375,785; Apr. 26; v. 285; p. 598.

Druar, Frank J., assignor to Packard Motor Car Company, Detroit, Mich. Motor-vehicle. No. 1,374,066; Apr. 5; v. 285; p. 133.

Drucker, Samuel and W. Sieck, Jr., Chicago, Ill. Making catalytic material. No. 1,375,368; Apr. 19; v. 285; p. 487.

Drummond, Alexander C., Ilion, N. Y. Gun-cleaner. No. 1,373,999; Apr. 5; v. 285; p. 121.

Dubee, Adelard J., Glens Falls, N. Y. Sash-tightener. No. 1,374,067; Apr. 5; v. 285; p. 134.

Duca, Luigi, Turin, assignor to Societa Anonima Manifatturs Luigi Duca, Busta Arsizio, Italy. Automatic clutch. No. 1,375,576; Apr. 19; v. 285; p. 527.

Duckworth, John T., assignor to F. M. Rapp, Philadelphia, Pa. Heater. No. 1,374,836; Apr. 12; v. 285; p. 323.

Dudas, Andrew, Homestead, Pa. Life-buoy. No. 1,375,494; Apr. 19; v. 285; p. 511.

Duerst, William B., Pine Lawn, assignor of one-half to F. Wodicka, St. Louis, Mo. Dirigible headlight. No. 1,375,138; Apr. 19; v. 285; p. 444.

Duff Manufacturing Company, The. (See Kopf, John C., assignor.)

Duffy, Thomas I., Oak Park, assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Automobile-bumper. No. 1,373,954; Apr. 5; v. 285; p. 112.

Du Lac, B., *et al.* (See Auger, Joseph T., assignor.)

Dunbar, Ernest W., assignor to Apsley Rubber Company, Hudson, Mass. Welt-strip and making same. No. 1,375,283; Apr. 19; v. 285; p. 472.

Duncan, Joseph S., assignor to Addressograph Company, Chicago, Ill. Printing device. No. 1,375,683; Apr. 26; v. 285; p. 580.

Duncanson, George, Jr., Jersey City, N. J. Printer's quoin. No. 1,375,495; Apr. 19; v. 285; p. 512.

Dunkelsberg, Louis, Brooklyn, N. Y. Spectacles. No. 1,374,287; Apr. 12; v. 285; p. 216.

Dunkley Company. (See Dunkley, Samuel J., assignor.)

Dunkley, Samuel J., assignor to Dunkley Company, Kalamazoo, Mich. Peach-pitting tool. No. 1,374,288; Apr. 12; v. 285; p. 217.

Dunkley, Samuel J., assignor to Dunkley Company, Kalamazoo, Mich. Paring and pitting knife. No. 1,374,289; Apr. 12; v. 285; p. 217.

Dunkley, Samuel J., assignor to Dunkley Company, Kalamazoo, Mich. Pitter-knife. No. 1,374,290; Apr. 12; v. 285; p. 217.

Dunkley, Samuel J., assignor to Dunkley Company, Kalamazoo, Mich. Mixing-tank. No. 1,374,291; Apr. 12; v. 285; p. 217.

Dunlap, Elon, Diamond Springs, Calif. Mount for plows and other tools. No. 1,375,577; Apr. 19; v. 285; p. 527.

Dunn, Alfred J., Birmingham, England. Concrete and like structure. No. 1,375,903; Apr. 26; v. 285; p. 621.

Dunn, Edmund L., assignor of one-third to J. P. Salmon and one-third to E. D. Fitzpatrick, Philadelphia, Pa. Bolt-reclaiming machine. No. 1,374,723; Apr. 12; v. 285; p. 301.

Dunn, Edward L., Worcester, Mass. Chain-carrying attachment for motor-vehicles. No. 1,374,556; Apr. 12; v. 285; p. 269.

Dunn, Louis, Minneapolis, Minn. Syringe attachment. No. 1,373,803; Apr. 5; v. 285; p. 82.

Dunn Manufacturing Company. (See Dunn, William L., assignor.)

Dunn Manufacturing Company. (See McKissick, William H., assignor.)

Dunn, Noble C., Little Rock, Ark. Sand-unloading device. No. 1,374,068; Apr. 5; v. 285; p. 134.

Dunn, William H., Chicago, Ill. Toy aeroplane. No. 1,374,000; Apr. 5; v. 285; p. 121.

Dunn, William L., assignor to Dunn Manufacturing Company, Oxnard, Calif. Well apparatus. No. 1,376,009; Apr. 26; v. 285; p. 642.

Dunstan, John H., and R. A. Davis, Slidell, La. Condenser and separator for wood-impregnating retorts. No. 1,374,069; Apr. 5; v. 285; p. 134.

Dupaul, Young Optical Co. (See Bellair, Edward, assignor.)

Du Pont, E. I. de Nemours & Company. (See Cooke, Maurice B., assignor.)

Du Pont, E. I. de Nemours & Company. (See Jacobs, Charles R., assignor.)

Du Pont, E. I., de Nemours & Company. (See Schuite, Louis, assignor.)

Du Pont, E. I., de Nemours & Company. (See Swint, Wendell R., assignor.)

Durand Steel Locker Company. (See Vance, Walter N., assignor.)

Durhan, George, New York, N. Y. Apparatus for ornamenting lead. No. 1,376,083; Apr. 26; v. 285; p. 656.
